Chapter 1 Specification

1..General Description

This document describes the detailed product specification of the notebook.

Green753 is a full function, high performance notebook providing complete multimedia functionalities with 11.8" SVGA color LCD. The notebook has CD-ROM drive built in and optional internal MPEG module which enables the playback motion pictures in most of the CD-ROM titles available in the market.

2..CPU

- Intel P54C, P54LM, P54CSLM and P55C series
- ZIF socket
- 3.3V for basic configuration
- Regulator to match different CPU power rail
(P54C/3.3V, P54LM/2.9V, P54CSLM/2.9V, P55C/2.5V)
- Running up to 166 MHz (internal clock)
(Max. Speed of CPUs:P54C-90, P54LM-100, P54CSLM-150, P55C-166)
- BUS clock up to 66 MHz

3..Core Logic.

- Controller: Opti-Viper chipset
- Supports concurrent 32-bit PCI BUS
- Supports L1 and L2 write back cache
- Supports synchronous burst pipeline 3.3V SRAM
- Supports Local IDE

4..Memory

4.1..Main Memory:

- 8MB on board
- 8/16/32 MB memory card options (72-pin standard DIMM socket x 2)
- 5V DRAM

4.2..ROM:

- 128KB x 2 or 256KB x 1 Flash Memory

4.3..Cache Memory

- 256K write-back cache, synchronous SRAM

5..Mass Storage

5.1..HDD:

- 2.5" ,19 mm HDD space
- Local IDE support

5.2..FDD:

DOCUMENTATION	TITLE:	DOC. NO.:
Alpha-Top Corporation	Green753 Product SPEC.	REV.: 1.0

- 3.5" 720K/1.2MB/1.44MB diskettes support , 1.2MB format support for NEC PC compatibility

5.3..CD-ROM drive:

- Manufacturer: TEAC. Toshiba
- 5.25" CD-ROM
- 4X speed
- IDE interface

6..Video System

6.1..Video Controller: Cirrus Logic 7543

- supports Feature-Connector for MPEG and TV solution
- supports video overlay

6.2..Graphic Feature

- Windows GUI Accelerator
- Full power management feature
- Running on PCI BUS
- Software MPEG
- Support up to 1024×768×256 colors mode on external CRT
- Support 800×600 LCDs

6.3..Video Memory:

- 1MB for standard configuration
- Room for 2MB

6.4..LCD Display:

- The whole assembly is field-interchangeable
- 11.3" /DSTN/SVGA: Hitachi-9900, Sanyo-FE53
- 11.3" or 11.8" /TFT/SVGA: Hitachi, Mitsubishi-ADI

7..I/O Ports

7.1..Standard Ports

- One 16550 UART RS-232 serial port (9-pin male D-connector)
- One parallel port support EPP/ECP (25-pin female D-connector)
- One video port for external analog VGA monitor (15-pin female D-connector)
- One game port (15-pin female D-connector)
- One external auto-sensed PS/2 keyboard/mouse connector(6-pin mini-DIN connector),
- One DC input port for external AC adaptor (4-pin DC jack)
- One Type III and one Type II PCMCIA card socket or two Type II *CLP6729*
- Docking Station Connector
- Line in /Line out/ Mic in for internal Sound Card
- IR port, IrDA standard
- Composite video output port for display on TV set
- Game/Midi port

7.2..I/O controller

DOCUMENTATION	TITLE:	DOC. NO.:
Alpha-Top Corporation	Green753 Product SPEC.	REV.: 1.0

- Controller: Cirrus Logic-6729
- 3.3V/5V card support
- Running on PCI BUS
- Software configurable

8..I/O Devices

8.1..Keyboard:

- US/Europe, DOS/V keyboard for Japan
- 86 keys
- Key stroke: 3 mm
- Twelve function keys
- Inverted "T" cursor control keys layout
- Screwless removable
- Internal keyboard works as standard 101/102 desktop keyboard

8.2..Pointing Device: Touchpad

- Touchpad under space bar of keyboard
- Both external PS/2 mouse and internal pointing device can work concurrently

8.3..Sound System

- Controller: ESS 1788
- Sound Blaster, Sound Blaster Pro Compatible and Microsoft Sound System For Windows compatible
- 16-bit stereo sound
- Microphone and two speaker built-in

8.4..Optional MPEG Module

- Daughter card design
- MPEG I decoder: Winbond
- Video processor: AuraVision VxP-201
- MPEG I decompression
- Support all MPEG related video format such as CDI, VideoCD...etc.
- Video overlay through graphics controller
- Filtering, Scaling and Zooming with 2D interpolation

9..System Software

9.1..System BIOS:

- SystemSoft

9.2..VGA BIOS:

- Cirrus Logic

9.3..Operating System:

- Optional MS-DOS 6.22 or above version
- Optional Windows 3.1 or above version
- Optional OS/2 2.1 for Windows or above version
- Optional Windows NT

DOCUMENTATION

Alpha-Top

Corporation

TITLE:

Green753 Product SPEC.

DOC. NO.:

REV.: 1.0

- Optional Windows '95
- 9.4..Device Drivers and Utilities:
- Cirrus Logic: VGA driver and utility
 - ESS: Audio driver
 - Phoenix/SystemSoft: PCMCIA driver
 - ALPS: Touch-pad driver
 - TEAC: CD-ROM driver
 - Comcore: Software MPEG driver(optional)

10..CMOS Setup:

10.1..Normal information

- Displays system information
- Password protection of setup entry
- No cursor stop if item is unchangeable
- Master password support
- Block mode IDE support

11..Power Management System

- Multiple-mode power management scheme
- Static suspend
- Suspend to HDD
- Modem ring and any key triggered resume
- APM1.1 support
- Battery gas gauge support
- Suspend or warning on low battery

12..Power Subsystem

12.1..AC Adapter:

- Small form factor

12.2..Battery:

- Battery pack with 10-cell NiMH or 9-cell Lithium Ion, user interchangeable
- Removable and rechargeable
- Battery gas gauge function support, providing accurate battery charging and discharging status

13..Human Factors

13.1..Dimension:

- 299(W)×230(D)×56 (H)mm
- 11.8" × 9." × 2.2"

13.2..Weight:

- 7 lbs (3.2Kgs) with battery and CD-ROM drive

13.3..Construction Description:

<p>DOCUMENTATION</p> <p>Alpha-Top</p> <p>Corporation</p>	<p>TITLE:</p> <p>Green753 Product SPEC.</p>	<p>DOC. NO.:</p> <p>REV.: 1.0</p>
---	--	-----------------------------------

- LCD assembly is field upgradable with a few screws removed, and main unit is independent to the type of LCD module used
- Speakers are located at two upper corner of the base, and the internal microphone is located at the palm rest area and under the Touchpad module

13.4..LCD indicators:

- A/C- IN
- Battery
- Num Lock
- Caps Lock
- Scroll Lock
- Pad Lock
- HDD
- FDD
- CD-ROM
- PCMCIA
- _SUSPEND

13.5..Hot Key:

- LCD brightness
- LCD contrast
- Audio Volume
- Display mode
- Suspend

14..Docking Station: Mini Docking

15..Accessories

- User's manual
- AC adapter
- Power cord
- Utility diskette
- Carrying bag
- Mini-docking (port replicator)
- External Charger

16..Optional Items

- Spare battery pack
- Memory expansion card
- MPEG module
- DOS
- Windows
- Windows95
- OS/2 for Windows
- Windows NT

<p>DOCUMENTATION</p> <p>Alpha-Top</p> <p>Corporation</p>	<p>TITLE:</p> <p>Green753 Product SPEC.</p>	<p>DOC. NO.:</p> <p>REV.: 1.0</p>
---	--	-----------------------------------

17..Environment

17.1..Temperature:

- Operating: 5°~35°C
- Non-operating: -20°~60°C

17.2..Humidity:

- Operating: 30%~90% (non-condensing)
- Non-operating: 5%~95% (non-condensing)

17.3..Altitude:

- Operating: -200~10000 ft
- Non-operating: -200~30000 ft

17.4..Shock:

- Operating: 10G, 11ms
- Non-operating: 50G, 11ms

17.5..Vibration:

- Operating: 10~27 Hz, 0.01"
- Non-operating: 5~62 Hz, 0.02"

17.6..Drop:

- 900mm

17.7..Noise:

- 35dB (max.) at 1 meter

17.8..ESD:

- Follow IEC 801-2 standard
- 0~15KV: no error allowed

17.9..P.L.T.:

- 1KV: no any error

18..Regulation

18.1..Safety:

- UL 1950, CSA, TUV, CE

18.2..EMI:

- FCC class B, BZT, VCCI

19..MTBF

- 20,000 hrs, 90% confidence level

20..MTTR

- 30 min.

DOCUMENTATION	TITLE:	DOC. NO.:
Alpha-Top	Green753 Product SPEC.	REV.: 1.0
Corporation		

Chapter 2 Power Supply

ADAPTER SPECIFICATIONInput Characteristics:

- * Input Voltage Range: 100Vac to 240Vac, single phase.
- * Input Frequency Range: 47 Hz to 63 Hz.
- * Max. Input Ac Current: 1 A, 90Vac input, full load.
- * Inrush Current(coldstart): 20A @ 115Vac, 40A @ 230Vac @max. load 25 DEG.C.
- * Efficiency: 75% min, at 115Vac input, full load, after warm up 30 sec.

Output Characteristics:

Static Output Characteristics (VO):

Output Voltage	Load	Range	Regulation	Ripple & Noise
1 +19V	Min. 0A	Max. 1.8A	+/- 1V	250 mV

- * Ripple & Noise Test: Use 20MHz bandwidth frequency oscilloscope.
- * Add 0.1 uF/10uF capacitor at output connector terminals for ripple & noise test.

Dynamis Output Characteristics:

- * Turn-on Delay Time: 2 sec max. @ 115Vac, full load.
- * Hold up Time: 10 mS min, @ 115Vac, full load.
- * Short Circuit Protection: Output can be shorted without damage.

Dielectric Withstand Voltage:

- * Primary To Secondary: 1500 Vac 10 mA max, at 120 Vac 60 Hz.
- * Leakage Current: 0.75 mA max, at 120 Vac 60 Hz.

Chapter 2

RFI/EMI: Internal filter to meet

- * FCC part 15 class B.
- * VFG 243/1991.

Product Safety:

- * This power supply is designed to meet the following spec.:
 - 1.) UL 1950
 - 2.) CSA C22.2 Level 3
 - 3.) TUV EN60 950

Environment:

- * Operating Temperature: 0 to 40 degree C.
- * Operating Relative Humidity: 15 to 85%.
- * Storage Temperature: -10 to 85 degree C.
- * Storage Relative Humidity: 5 to 90%.
- * Altitude: Operate properly at any altitude between 0 to 10,000 feet.
- * Vibration:
 - Operating: 0.75G zero to peak, 5 to 500 Hz, 0.5 octave/minute, one cycle,
5 to 500 to 5 Hz per axis in each of three mutually perpendicular axis.
 - Non-operating: 1.5G zero to peak, 5 to 50 Hz, 0.5 octave/minute, one cycle,
5 to 500 to 5 Hz per axis in each of three mutually perpendicular axis.

DC/DC POWER SPECIFICATION

Introduction:

- * High efficiency, DC/DC converter for notebook computer.

Input Characteristics:

Input voltage range:

- * AC/DC adapter: +19V($\pm 1V$).
- * Battery: 10 cells for NiMH Battery.(Optional Lithium-Ion 9 cells.)

Input current range:

- * From adapter: 1.8 A max(including charger).
- * From battery: 2.2 A(typ.).

Input pin assignment:

- * Input jack: (1) SENSE (2) VA (3) GND (4) GND
- * Battery input connector: (1) VB (2) GND (3) BTID (4) NTC1 (5) NTC2 (6) DQ

Description:

- * VA: connected to charge source.
- * VB: discharge path for battery.
- * GND: system ground.
- * DQ: battery gauge.
- * NTC1 & NTC2: both pins of NTC Thermister
- * BTID: Battery ID(the type of battery).

Output Characteristics:

Output voltage parameter:

+5V O/P:

PARAMETER	SYMBOL	UNIT	MIN	NOM	MAX
Output current	I _{out}	Adc	0		3
O/P Surge current	I _{sur}	Adc			3.5
Output voltage	V _{out}	Vdc	4.75	5	5.25
O/P Ripple	V _{rip}	mV(p-p)			100
OCP	I _{lim}	Adc			4

Chapter 2

+3.3V O/P:

PARAMETER	SYMBOL	UNIT	MIN	NOM	MAX
Output current	I _{out}	A _{dc}	0		3
O/P Surge current	I _{sur}	A _{dc}			3.5
Output Voltage	V _{out}	V _{dc}	3.3	3.45	3.6
O/P Ripple	V _{out}	mV(p-p)			100

+12V O/P:

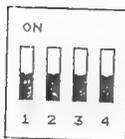

PARAMETER	SYMBOL	UNIT	MIN	NOM	MAX
Output current	I _{out}	mA _{dc}	0		150
O/P Surge current	I _{sur}	mA _{dc}			200
Output Voltage	V _{out}	V _{dc}	1.4	12	12.6
O/P Ripple	V _{out}	mV(p-p)			240

+2.5V /+2.9V /+3.1V /+3.3V O/P:

	MIN	NOM	MAX
O/P Current	0		3
Surge Current			3.5
Ripple			100

- * Remark: 1. The voltage is adjusted by a switch(sw3).
2. The voltage tolerance is $\pm 5\%$.

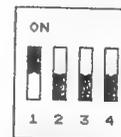

2.5V

2.9V

3.1V

3.3V

Charger Characteristics:

Charger current:

- 1) Quick Charge: 1.8~2.2A
- 2) Puls Trickle Charge: 1.8~2.2A

Chapter 2

Charger Control:

- 1-delta temperature / delta time
- 2-Max voltage
- 3-Max temperature
- 4-Safety time
- 5-Negative delta voltage

Efficiency:

0.8 min

Test Condition:

- * VBA: From adapter or battery
- * +5V: 3A
- * +3.3V: 3A
- * +12V: 150mA
- * +2.5V /+2.9V /+3.1V /+3.3V: 3A

Protection:

- * OCP: Over Current Protection.
 - +5V Protection: 4A min
 - +3.3V Protection: 4A min
 - +2.5V /+2.9V /+3.1V /+3.3V Protection: 4A min

Humidity:

- * Operating: 15-85% non-condensing
- * Storage: 5-90% non-condensing

Temperature:

- * Operating: 0~40 degree C
- * Storage: -20~+70 degree C

Burn-In:

- * 24 hours at 40 degree C, normal input voltage, full load.

Chapter 3 DMA, Timer/Counter

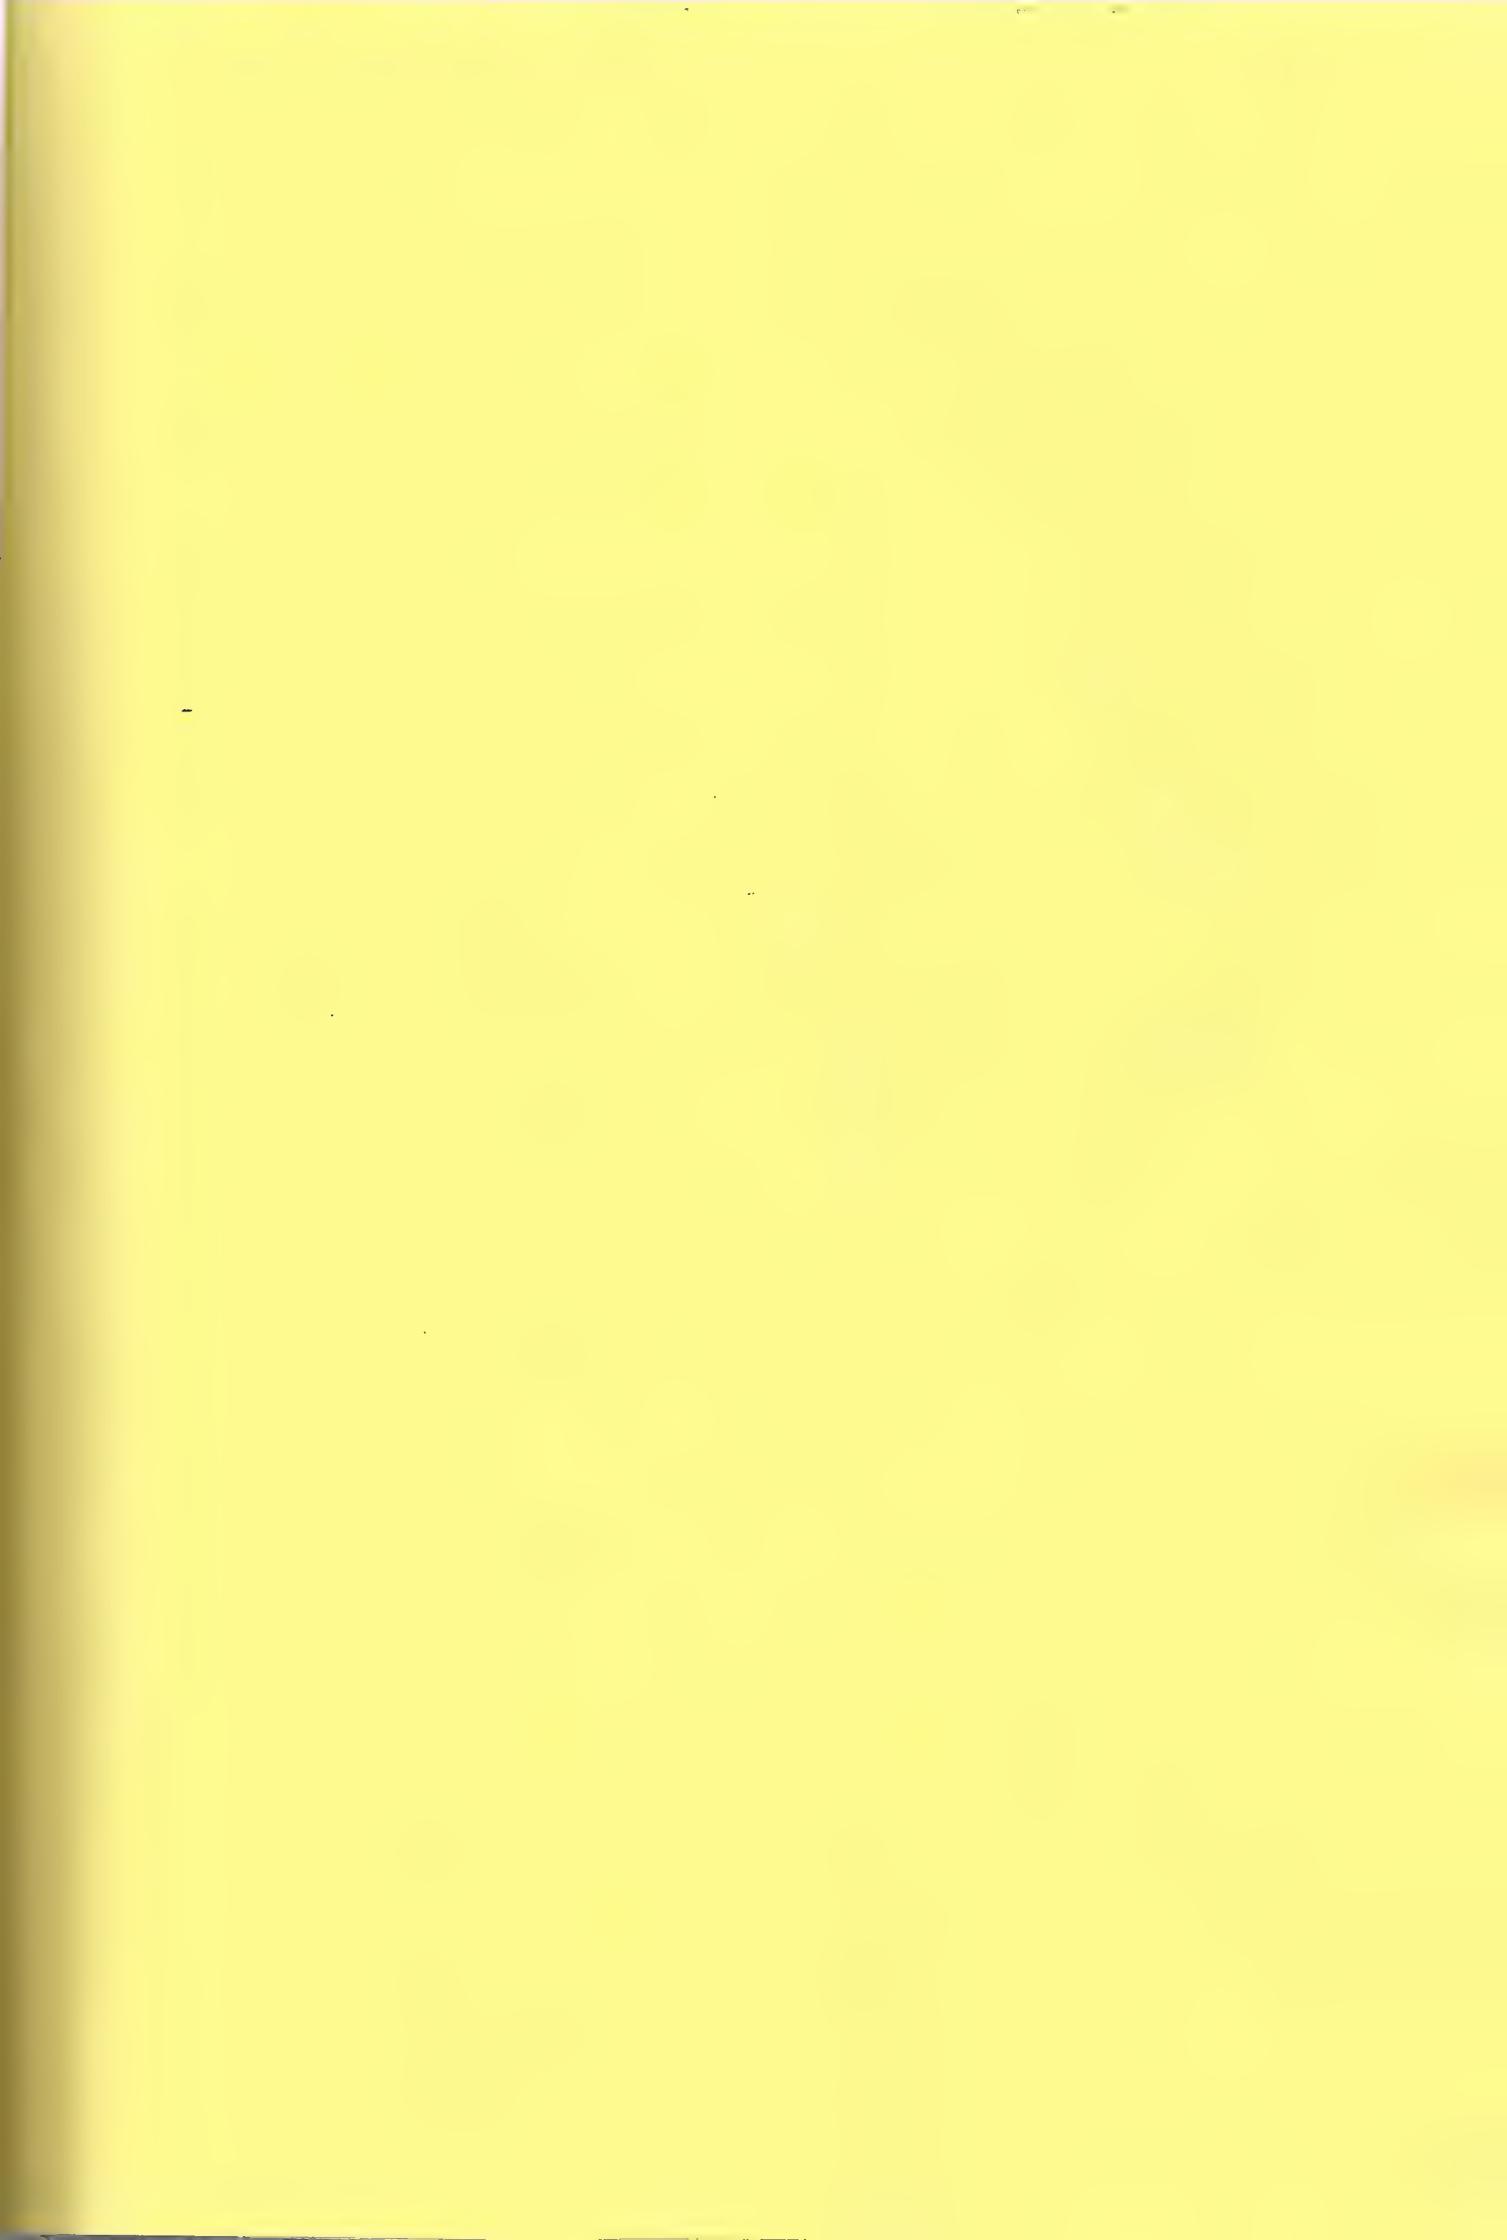

DMA channel:

DMA Channel No.	Function
Channel 0	Available
Channel 1	Sound Module
Channel 2	Floppy Disk
Channel 3	ECP Support
Channel 4	[Cascade]
Channel 5	Available
Channel 6	Available
Channel 7.	Available

Programmable Timer/Counters

Channel No	Function
Channel 0	Supports system timer
Channel 1	Supports refresh cycles
Channel 2	Supports the audio speaker

<i>Chapter 4 Interrupts</i>

Interrupt	Function
IRQ 0	System Timer
IRQ 1	Keyboard
IRQ 2	[Cascade]
IRQ 3	COM2 (IrDA)
IRQ 4	COM1
IRQ 5	Parallel Printer Port 2
IRQ 6	Floppy Disk
IRQ 7	Parallel Printer Port 1
IRQ 8	Clock/Calendar
IRQ 9	Cascaded to INT 0AH (IRQ 2) / Sound Module
IRQ 10	MPEG Card
IRQ 11	PCMCIA Socket Service
IRQ 12	Touch-Pad
IRQ 13	Coprocessor
IRQ 14	Fixed Disk Controller
IRQ 15	Reserved

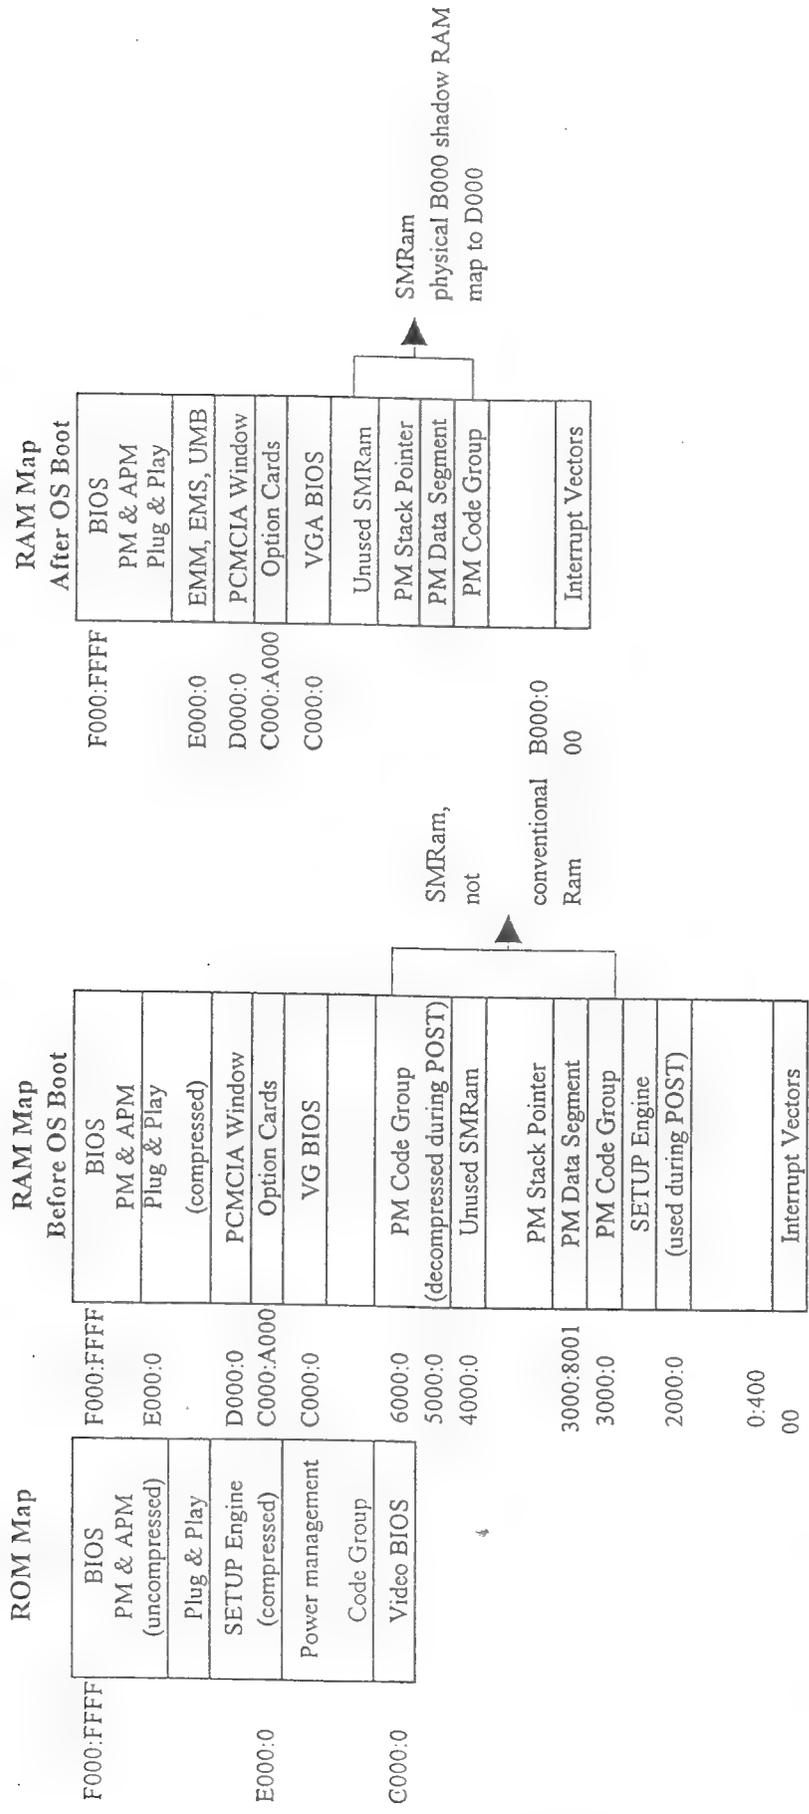

Note: 1. IRQ 3, 4, 5, 7, 9, 10, 11, 12, 14 are connected to PCMCIA controller, but available for PCMCIA function only when the IRQ is not used by other device.

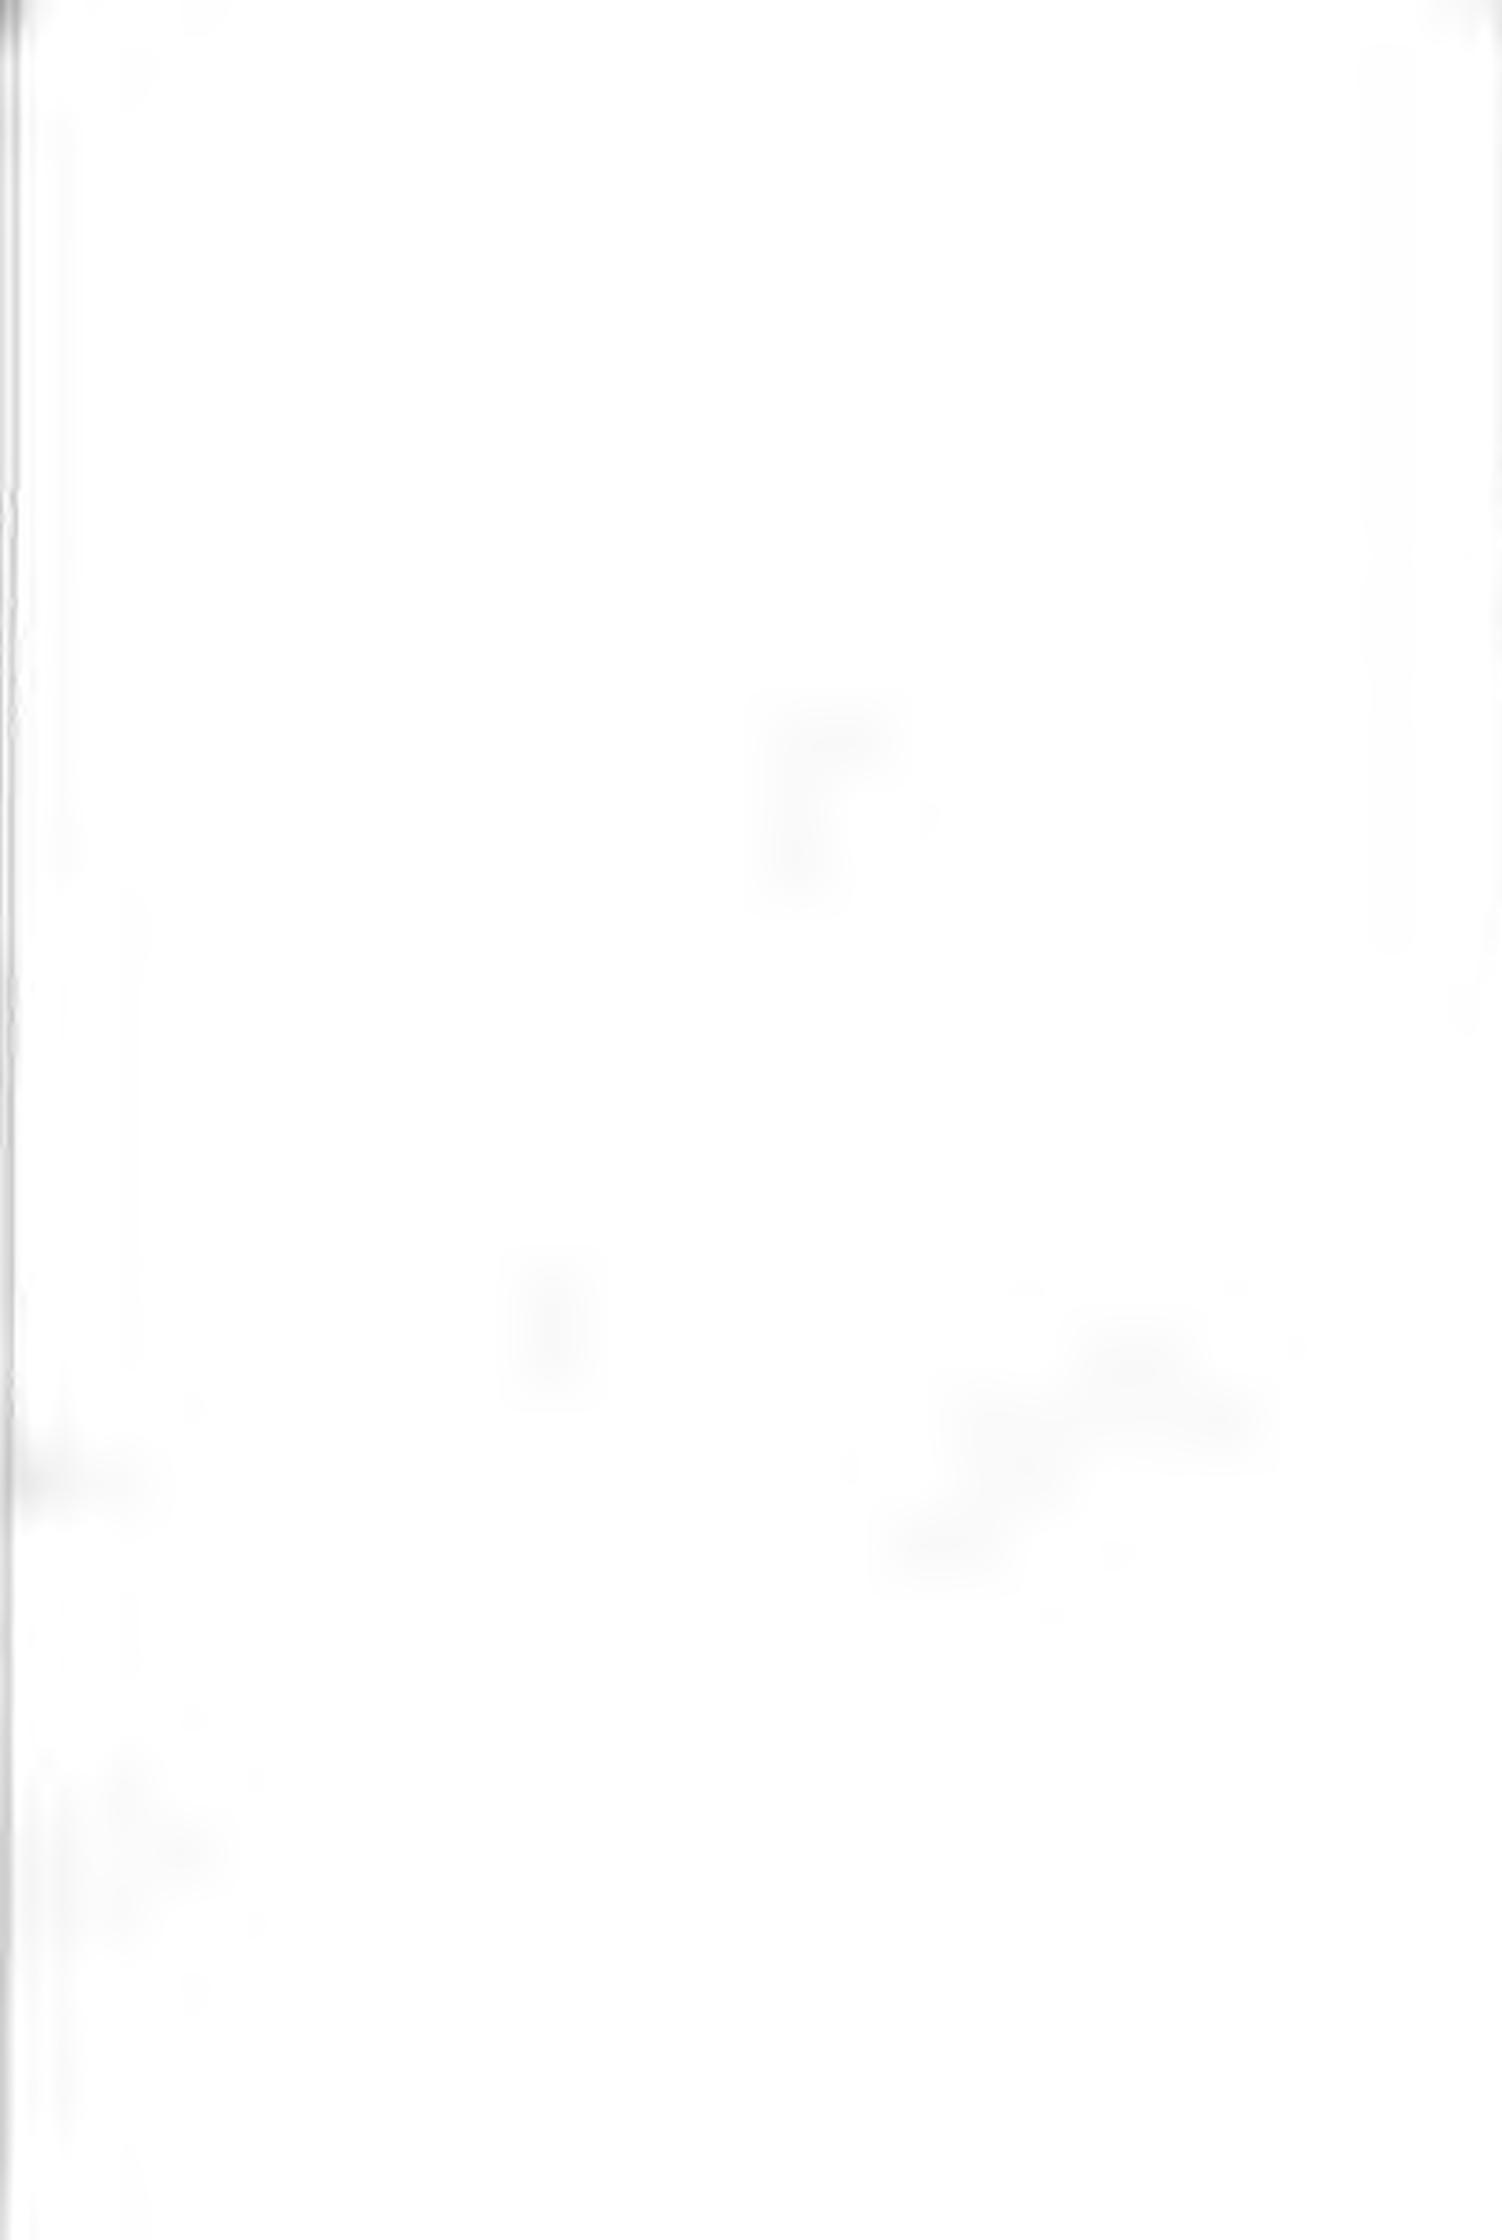

2. IRQs connected to Docking Port are IRQ 3-5, 7, 9, 10-12, 14, 15.

Chapter 5 Memory Address Mapping

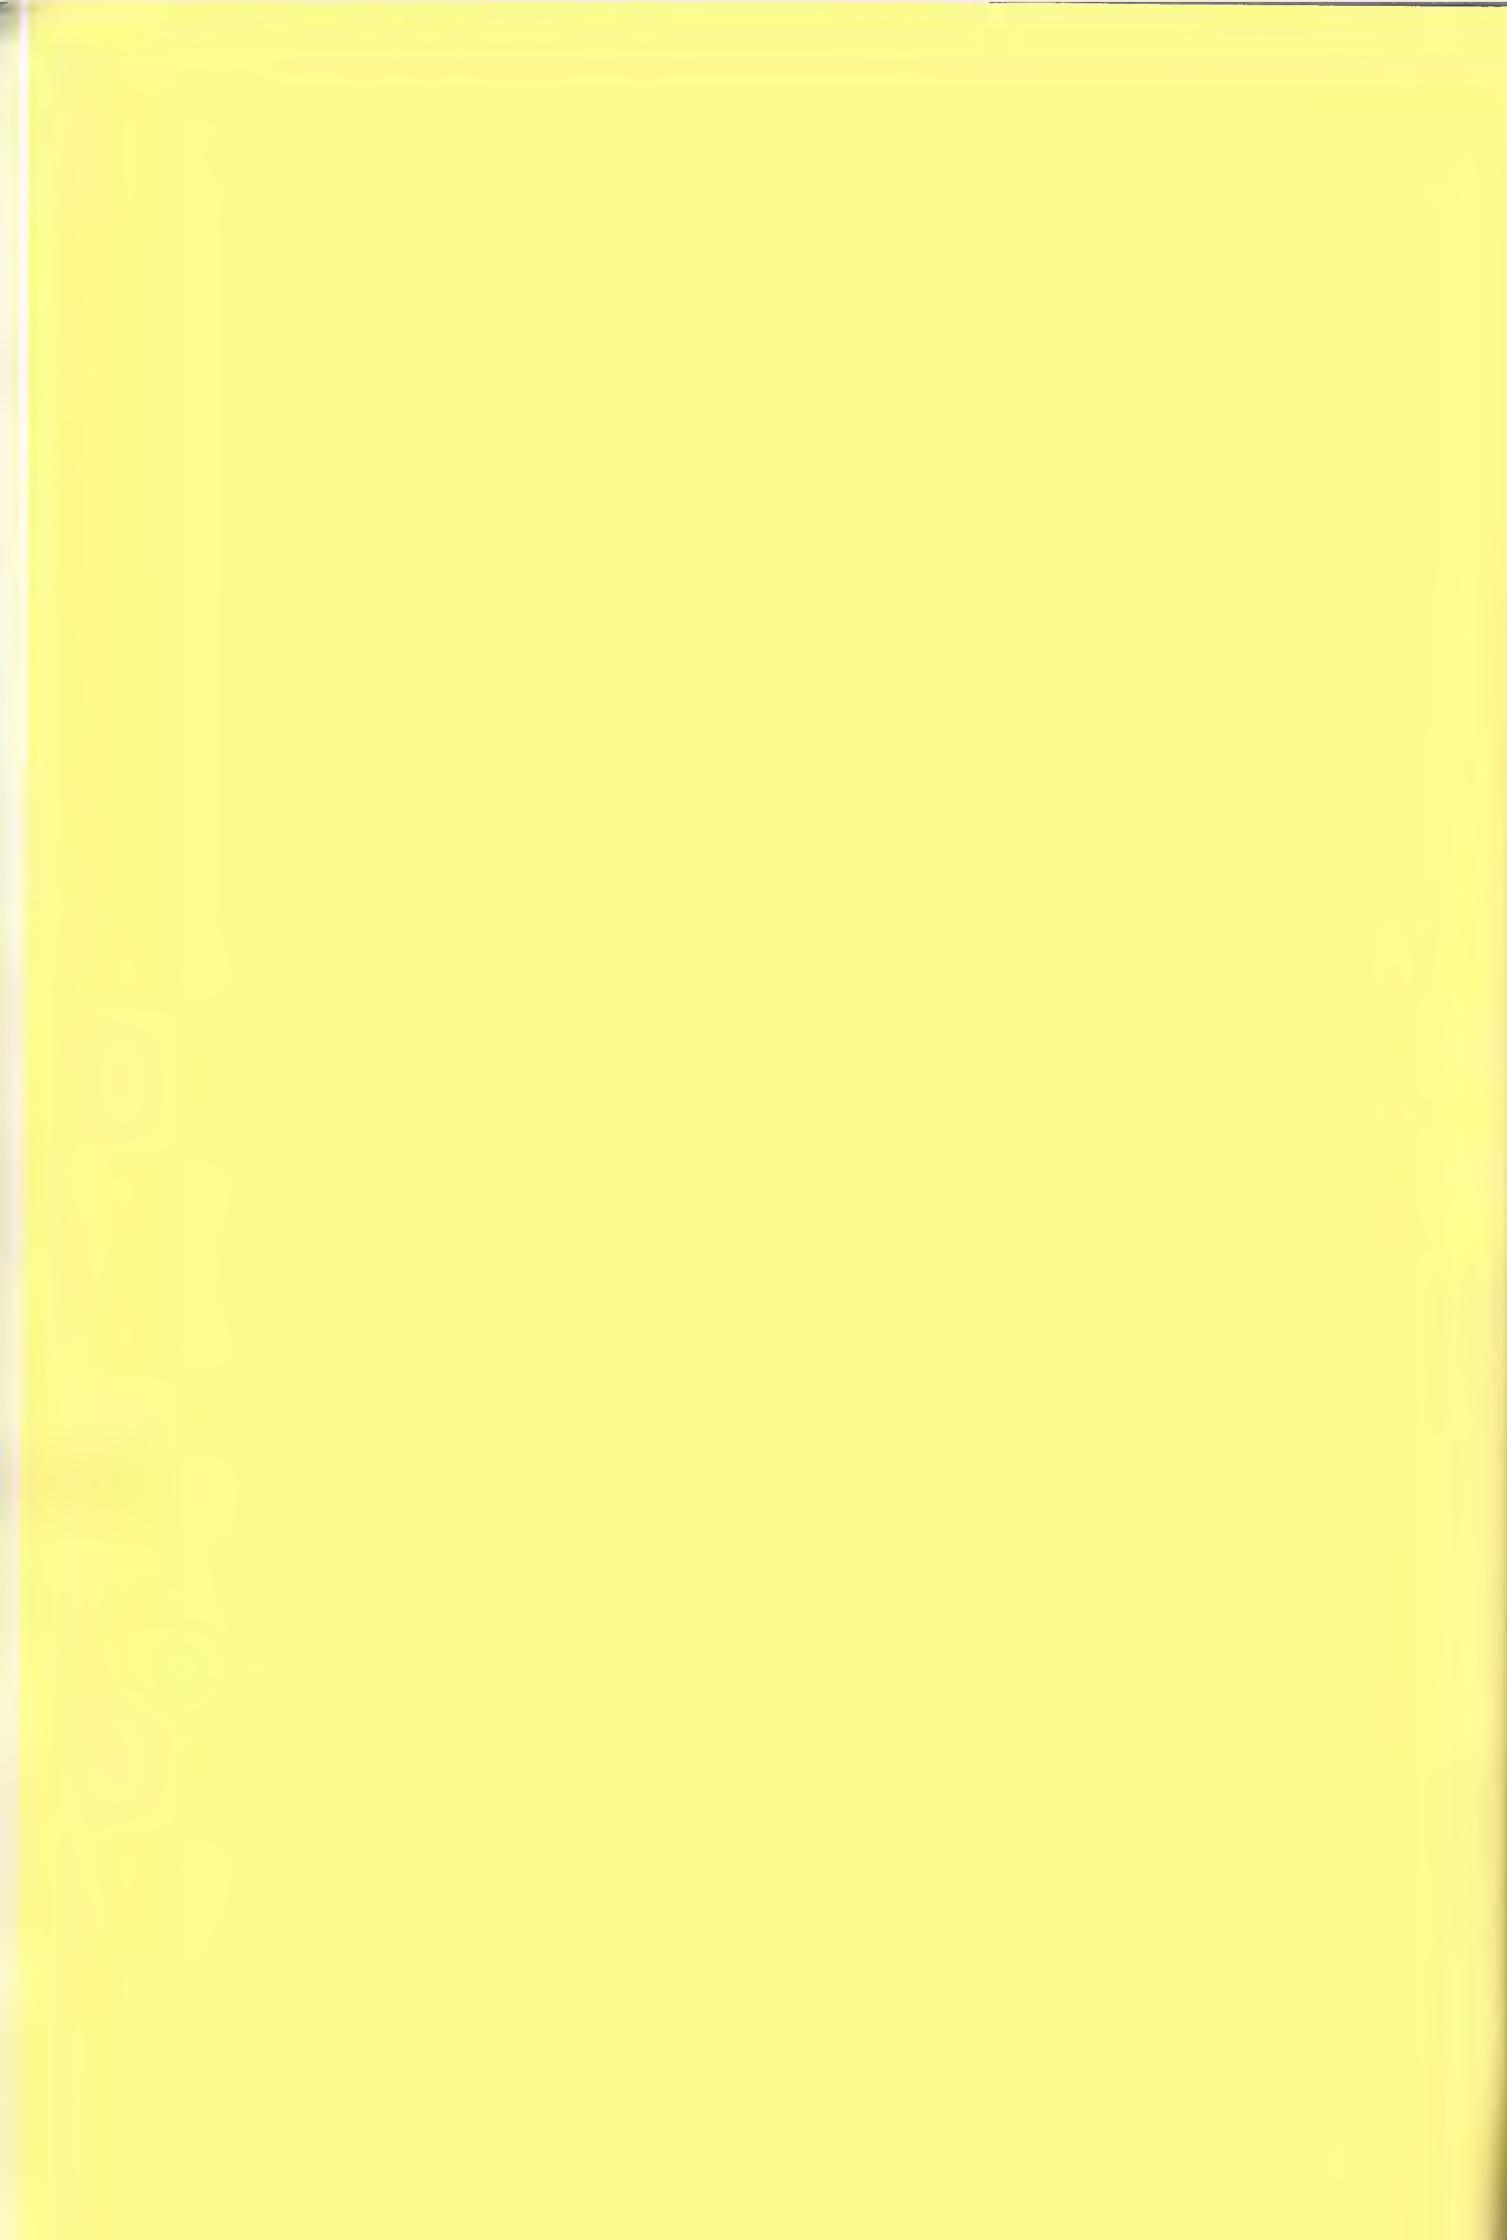

Chapter 6 I/O Address Mapping

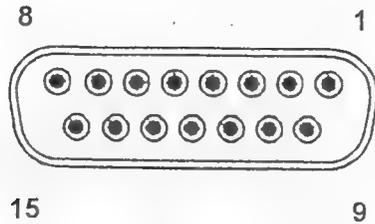

Hexadecimal Range	Devices	Usage
000-01F	DMA controller 1	System
020-03F	Interrupt controller 1	System
040-05F	Timer	System
060-06F	Keyboard I/O	System
070-07F	Real time clock, NMI mask	System
080-09F	DMA page register	System
0A0-0BF	Interrupt controller 2	System
0C0-0DF	DMA controller 2	System
0F0	Clear math coprocessor busy	System
0F1	Reset math coprocessor	System
0F8-0FF	Math coprocessor	System
1F0-1F8	Fixed disk	I/O
200-207	Game	I/O
278-27F	Parallel printer port 2	I/O
2F8-2FF	Serial port 2	I/O
300-31F	Prototype card	I/O
360-36F	Reserved	I/O
378-37F	Parallel printer port 1	I/O
380-38F	SDLC, bisynchronous 2	I/O
3A0-3AF	Bisynchronous 1	I/O
3B0-3BF	Mono display printer adapter	I/O
3C0-3CF	Reserved	I/O
3E0-3EF	Color/graphic monitor adapter	I/O
3F0-3F7	PCMCIA controller	I/O
3F8-3FF	Serial port 1	I/O

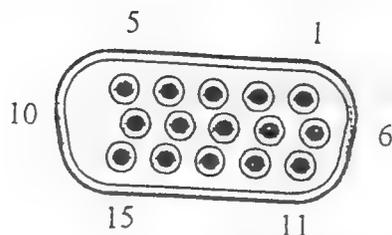

Chapter 7 Connector & Pin Assignment

The Pin Assignment of GAME/MIDI Port

Pin	Signal	Pin	Signal
1	VCC	9	VCC
2	Joystick Switch A	10	Joystick Switch C
3	Joystick Data A	11	Joystick Data C
4	GND	12	MIDI OUT
5	GND	13	Joystick Data D
6	Joystick Data B	14	Joystick Switch D
7	Joystick Switch B	15	MIDI IN
8	VCC		

The Pin Assignment of Video Port

Pin	Signal	Pin	Signal
1	Red	9	NC
2	Green	10	Ground
3	MS2	11	MS0
4	NC	12	MS1
5	Ground	13	Horizontal Sync
6	Ground	14	Vertical Sync
7	Ground	15	NC
8	Ground		

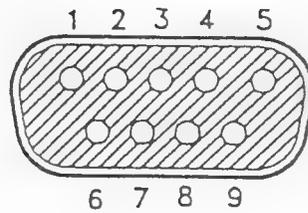

Chapter 7

Chapter 8 INT Function

The following lists the available interrupt services made through the system BIOS. For detailed information about each function, refer to any one of the many books on interrupts.

INT	Type	Function
02	Logical	Nonmaskable Interrupt
05h	Software	Print Screen
08h	Hardware	System Timer
09h	Hardware	Keyboard
0Ah	Hardware	Slave PIC Redirect
0Eh	Hardware	Diskette
10h	Software	Video
		AH Value Function
		00h Set Video Mode
		01h Set Cursor Type
		02h Set Cursor Position
		03h Read Current Cursor Position
		04h Not Supported
		05h Select New Video Page
		06h Scroll Current Page Up
		07h Scroll Current Page Down
		08h Read Character/Attribute to Screen
		09h Write Character/Attribute from Screen
		0Ah Write Character Only to Screen
		0Bh Set Color Palette
		0Ch Write Pixel
		0Dh Read Pixel
		0Eh Write Teletype to Active Page
		0Fh Return Video Status
		10h-12h Not Supported
		13h Write String
		14h-FFh Reserved
11h	Software	Equipment List
12h	Software	Memory Size
13h	Software	Diskette Service (Interrupt 40h)
		AH Value Function
		00h Reset Diskette System
		01h Read Diskette Status
		02h Read Diskette Sectors
		03h Write Diskette Sectors
		04h Verify Diskette Sectors
		05h Format Diskette Track
		06h, 07h Reserved
		08h Read Drive Parameters
		09h-14h Reserved
		15h Read Drive Type
		16h Detect Media Change
		17h Set Diskette Type

Chapter 8

BIOS Interrupts *Continued...*

POST Errors

A. Recoverable POST Errors

Whenever a recoverable error occurs during POST, *PhoenixBIOS* displays an error message describing the problem.

PhoenixBIOS also issues a beep code (one long tone followed by two short tones) during POST if the video configuration fails (no card installed or faulty) or if an external ROM module does not properly checksum to zero.

An external ROM module (e.g. VGA) can also issue audible errors, usually consisting of one long tone followed by a series of short tones.

B. Terminal POST Errors

There are several POST routines that issue a POST Terminal Error and shut down the system if they fail. Before shutting down the system, the terminal-error handler issues a beep code signifying the test point error, writes the error to port 80h, attempts to initialize the video, and writes the error in the upper left corner of the screen (using both mono and color adapters).

The routine derives the beep code from the test point error as follows:

1. The 8-bit error code is broken down to four 2-bit groups.
2. Each group is made one-based (1 through 4) by adding 1.
3. Short beeps are generated for the number in each group.

Example:

Testpoint 01Ah = 00 01 10 10 = 1-2-3-3 beeps

If the BIOS detects error 2C, 2E, or 30 (base 512k RAM error), it displays an additional word of information reflecting the bit or address line that failed. For example, if "2C 0002" is displayed, address line 1 (represented by bit one) has failed. If "2E 1020" is displayed, then data bits 12 and 5 have failed in the upper 16 bits.

BIOS sends the same information to the port-80 LED display (See below). The check point code is followed by a delay, the high order byte, another delay, and then the low order byte of the error. This

Chapter 10

C. Test Points and Beep Codes

At the beginning of each POST routine, the BIOS outputs the test point error code to I/O address 80h. Use this code during trouble shooting to establish at what point the system failed and what routine was being performed.

Some motherboards are equipped with a seven-segment LED display that displays the current value of port 80h. For production boards which do not contain the LED display, you can purchase a card that performs the same function.

If the BIOS detects a terminal error condition, it halts POST after issuing a terminal error beep code (See above) and attempting to display the error code on upper left corner of the screen and on the port 80h LED display. It attempts repeatedly to write the error to the screen. This may cause "hash" on some CGA displays.

If the system hangs before the BIOS can process the error, the value displayed at the port 80h is the last test performed. In this case, the screen does not display the error code.

The following is a list of the checkpoint codes written at the start of each test and the beep codes issued for terminal errors:

Code	Beeps	POST Routine Description
02	10	Verify Real Mode
04	600	Get CPU type
06		Initialize system hardware
08		Initialize chipset registers with initial POST values
09		Set in POST flag
0A		Initialize CPU registers
0C		Initialize cache to initial POST values

0E		Initialize I/O
0F		Initialize the local bus IDE
10		Initialize Power Management
11		Load alternate registers with initial POST valuesnew
12		Jump to UserPatch0
14		Initialize keyboard controller
16	2-2-3	BIOS ROM checksum
18		8254 timer initialization
1A		8237 DMA controller initialization
1C		Reset Programmable Interrupt Controller
20	3-1-1	Test DRAM refresh
22	3-1-3	Test 8742 Keyboard Controller
24		Set ES segment register to 4 GB
28		Autosize DRAM
2A		Clear 512K base RAM
2C	3-4-1	Test 512K base address lines
2E	3-4-3	Test 512K base memory
32		Test CPU bus-clock frequency
34		Test CMOS RAM
35		Initialize other hardware devices.
37		Reinitialize the chipset (MB only)
38		Shadow system BIOS ROM

Chapter 10

39		Reinitialize the cache (MB only)
3A		Autosize cache
3C		Configure advanced chipset registers
3D		Load alternate registers with CMOS valuesnew
40		Set Initial CPU speed new
42		Initialize interrupt vectors
44		Initialize BIOS interrupts
46	2-1-2-3	Check ROM copyright notice
47		Initialize manager for PCI Option ROMs
48		Check video configuration against CMOS
49		Initialize PCI bus and devices
4A		Initialize all video adapters in system
4C		Shadow video BIOS ROM
4E		Display copyright notice
50		Display CPU type and speed
51		Initialize EISA slots
52		Test keyboard
54		Set key click if enabled
56		Enable keyboard
58	2-2-3-1	Test for unexpected interrupts
5A		Display prompt "Press F2 to enter SETUP"

5C		Test RAM between 512 and 640k
60		Test extended memory
62		Test extended memory address lines
64		Jump to UserPatch1
66		Configure advanced cache registers
68		Enable external and CPU caches
6A		Display external cache size
6C		Display shadow message
6E		Display non-disposable segments
70		Display error messages
72		Check for configuration errors
74		Test real-time clock
76		Check for keyboard errors
7C		Set up hardware interrupt vectors
7E		Test coprocessor if present
80		Disable onboard I/O ports.
82		Detect and install external RS232 ports
84		Detect and install external parallel ports
86		Re-initialize onboard I/O ports.
88		Initialize BIOS Data Area
8A		Initialize Extended BIOS Data Area
8C		Initialize floppy controller
90		Initialize hard-disk drives

Chapter 10

91		Local-bus IDE timing
92		Jump to UserPatch2
93		Build MPTABLE for multi-processor boards
94		Disable A20 address line
96		Clear huge ES segment register
98		Search for option ROMs
9A		Shadow option ROMs
9C		Set up Power Management
9E		Enable hardware interrupts
A0		Set time of day
A2		Check key lock
A4		Initialize typematic rate
A8		Erase F2 prompt
AA		Scan for F2 key stroke
AC		Enter SETUP
AE		Clear in-POST flag
B0		Check for errors
B2		POST done - prepare to boot operating system
B4		One beep
B6		Check password (optional)
B8		Clear global descriptor table
BC		Clear parity checkers

BE		Clear screen (optional)
BF		Check virus and backup reminders
C0		Try to boot with INT 19
DO		Interrupt handler error
D2		Unknown interrupt error
D4		Pending interrupt error
D6		Initialize option ROM error
D8		Shutdown error
DA		Extended Block Move
DC		Shutdown 10 error
		The following are for boot block in Flash ROM
E2		Initialize the chipset
E3		Initialize refresh counter
E4		Check for Forced Flash
E5		Check HW status of ROM
E6		BIOS ROM is OK
E7		Do a complete RAM test
E8		Do OEM initialization
E9		Initialize interrupt controller
EA		Read in the bootstrap code
EB		Initialize all vectors
EC		Boot the Flash program
ED		Initialize the boot device
EE		Boot code was read OK

D. PhoenixBIOS Messages

nnnn Cache SRAM Passed
Diskette drive A error
Diskette drive B error
Entering SETUP...

Parity Check 2 *nnnn* *
Press <F1> to resume, <F2> to Setup
Press <F2> to enter SETUP
Real time clock error *
Shadow Ram Failed at offset: *nnnn* *
nnnn Shadow RAM Passed
System battery is dead - Replace and run SETUP
System BIOS shadowed
System cache error - Cache disabled *
System CMOS checksum bad - run SETUP
System RAM Failed at offset: *nnnn* *
nnnn System RAM Passed
System timer error *
UMB upper limit segment address: *nnnn*
Video BIOS shadowed

* If your system displays this message, write down the message and contact your dealer. If your system fails after you made changes in the Setup menus, you may be able to correct the problem by entering Setup and restoring the original values. The following is an explanation of each of the messages listed above.

nnnn Cache SRAM Passed Where *nnnn* is the amount of system cache in kilobytes successfully tested.

Diskette drive A error or

Diskette drive B error Drive A: or B: is present but fails the BIOS POST diskette test. Check to see that the drive is defined with proper diskette type in Setup and that the diskette drive is attached correctly.

Entering SETUP... Starting Setup program

Extended RAM Failed at offset: *nnnn* Extended memory not working or not configured properly at offset *nnnn*.

nnnn Extended RAM Passed Where *nnnn* is the amount of RAM in kilobytes successfully tested.

Failing Bits: *nnnn* The hex number *nnnn* is a map of the bits at the RAM address (in System, Extended, or Shadow memory) which failed the memory test. Each 1 (one) in the map indicates a failed bit.

Fixed Disk 0 Failure or

Fixed Disk 1 Failure or

Fixed Disk Controller Failure Fixed disk is not working or not configured properly. Check to see if fixed disk is attached properly. Run Setup be sure the fixed-disk type is correctly identified.

Incorrect Drive A type - run SETUP Type of floppy drive A: not correctly identified in Setup.

Incorrect Drive B type - run SETUP Type of floppy drive B: not correctly identified in Setup.

Invalid NVRAM media type Problem with NVRAM (CMOS) access.

Keyboard controller error The keyboard controller failed test. You may have to replace keyboard or controller.

Keyboard error Keyboard not working.

Keyboard error *nn* BIOS discovered a stuck key and displays the scan code *nn* for the stuck key.

Keyboard locked - Unlocked key switch Unlocked the system to proceed.

Monitor type does not match CMOS - Run SETUP Monitor type not correctly identified in Setup.

Operating system not found Operating system cannot be located on either drive A: or drive C:.
Enter Setup and see if fixed disk and drive A: are properly identified.

Parity Check 1 Parity error found in the system bus. BIOS attempts to locate the address and display it on the screen. If it cannot locate the address, it displays ????

Parity Check 2 Parity error found in the I/O bus. BIOS attempts to locate the address and display it on the screen. If it cannot locate the address, it displays ????

Press <F1> to resume, <F2> to Setup Displayed after any recoverable error messages. Press <F1> to start the boot process or <F2> to enter Setup and change any settings.

Chapter 10

Press <F2> to enter **SETUP** Optional message displayed during POST. Can be turned off in Setup.

Previous boot incomplete - Default configuration used Previous POST did not complete successfully. POST loads default values and offers to run Setup. If the failure was caused by incorrect values and they are not corrected, the next boot will likely fail. On systems with control of wait states, improper Setup settings can also terminate POST and cause this error on the next boot. Run Setup and verify that wait-state configuration is correct. This error is cleared the next time the system is booted.

Real time clock error Real-time clock fails BIOS test. May require board repair.

Shadow Ram Failed at offset: *nnnn* Shadow RAM failed at offset *nnnn* of the 64k block at which the error was detected.

***nnnn* Shadow RAM Passed** Where *nnnn* is the amount of shadow RAM in kilobytes successfully tested.

System battery is dead - Replace and run SETUP The CMOS clock battery indicator shows the battery is dead. Replace the battery and run Setup to reconfigure the system.

System BIOS shadowed System BIOS copied to shadow RAM.

System cache error - Cache disabled RAM cache failed the BIOS test. BIOS disabled the cache.

System CMOS checksum bad -run SETUP System CMOS has been corrupted or modified incorrectly, perhaps by an application program that changes data stored in CMOS. Run Setup and reconfigure the system either by getting the Default Values and/or making your own selections.

System RAM Failed at offset: *nnnn* System RAM failed at offset *nnnn* of in the 64k block at which the error was detected.

***nnnn* System RAM Passed** Where *nnnn* is the amount of system RAM in kilobytes successfully tested.

System timer error The timer test failed. Requires repair of system board.

UMB upper limit segment address: *nnnn* Displays the address *nnnn* of the upper limit of Upper Memory Blocks, indicating released segments of the BIOS which may be reclaimed by a virtual memory manager.

Video BIOS shadowed Video BIOS successfully copied to shadow RAM.
