# Introduction

Innovative technology and ergonomic design make this notebook the ideal user-friendly and reliable travel companion. The operating system is pre-installed on the hard disk to facilitate the procedure when you use your notebook for the first time.

The energy-saving processor and the energy-saving functions that can be configured allow you to use the battery capacity of your notebook effectively. By using an additional battery pack instead of the disk drive, you can double the notebook's mobile operation time.

The notebook is equipped with a 8 Mbytes main memory. The main memory of the Mobile 500 notebook can be upgraded up to 40 Mbytes, the main memory of Mobile 700 notebook can be upgraded up to 72 Mbytes. Data is saved on an Enhanced-IDE hard disk drive. Your notebook is also equipped with a 3 1/2-inch disk drive. The Mobile 700 can also be equipped with a CD-ROM drive. Two PC card slots (formerly called PCMCIA) enable the Mobile 500 notebook to operate two type I/II PC cards or one type III PC card. The two PC card slots on the Mobile 700 notebook allow simultaneous operation of type I/II and type III PC cards.

For mouse control the notebook provides a touchpad. A double-touch directly on the touchpad is all that is needed, for example, to open an application

Connections for external devices such as external monitor, printer and mouse are located on the rear panel of the notebook. The parallel port (which supports ECP and EPP modes) is designed to accommodate bi-directional data transfer.

The notebook disposes of a infrared interface for wireless data transfer.

In addition, the notebook has a connection port for a MobiDock or a QuickPort/QuickPort Plus.

An audio controller, two loudspeakers, a microphone and an audio input and output provide your notebook with an audio capability. You can thus incorporate voice, noise effects and music into your PC environment. You can also connect an external microphone and an external loudspeaker.

The system settings of the notebook can be configured via the user-friendly *BIOS Setup* program. Certain system settings (e.g. screen display, power-management functions) can be modified via various key combinations while you are using the notebook.

Your notebook has a number of security features to ensure that no unauthorized persons can access your data. For example, you can activate a screen saver with password protection. The security functions in the *BIOS Setup* also allow you to protect your data by means of passwords.

This Operating Manual tells you how to put your notebook into operation and how to operate it in daily use.

## Notational conventions

The meanings of the symbols and fonts used in this manual are as follows:

Pay particular attention to texts marked with this symbol. Failure to observe this warning endangers your life, destroys the system, or may lead to loss of data.

This symbol is followed by supplementary information, remarks and tips.

- ▶ Texts which follow this symbol describe activities that must be performed in the order shown.
- ┆ This symbol means that you must enter a blank space at this point.

This symbol means that you must press the Enter key.

`Texts in this typeface` are screen outputs from the server.

**Texts in this bold typeface** are the entries you make via the keyboard.

*Texts in italics* indicate commands or menu items.

"Quotation marks" indicate names of chapters and terms that are being emphasized.

---

# Important notes

In this chapter you will find information regarding safety which it is essential to take note of when working with your notebook. The manufacturer's notes contain helpful information on your notebook. This chapter also contains information on the licenses like CE certificate and RFI suppression of the notebook.

## Safety

This device complies with the relevant safety regulations for data processing equipment, including electronic office machines for use in an office environment. If you have any questions, contact your sales office or our customer service.

- Always use the bag supplied when transporting the notebook.  
If it needs to be shipped, use the original packaging or other suitable packaging to protect it from damage through mishandling.
- If the device is brought into the installation site from a cold environment, condensation can form. Before operating the device, wait until it is absolutely dry and has reached approximately the same temperature as the installation site.
- Ensure that the local line voltage remains within the range of 100 V to 240 V. Check the rated voltage set for the device.
- During installation and before operating the device, observe the instructions on environmental conditions in the chapter "[Preparation for use and operation](#)" as well as the instructions in the chapter "[Technical data](#)".
- Only run the notebook off the battery or power adapter included, or off authorized accessories (car adapter, MobiDock or QuickPort/QuickPort Plus).
- The power adapter has a specially approved power cable and must only be connected to a grounded power outlet.  
If the power adapter is connected to the grounded power outlet, it must be free-standing. The power adapter may not be covered while it is in operation. Do not stand the power adapter on heat-sensitive material.
- Ensure that the power socket on the power adapter or the grounded power outlet is freely accessible.
- The ON/OFF switch does not disconnect the device from the line voltage. To disconnect the line voltage completely, remove the power plug from the grounded power outlet.

- Lay the cables so that they are out of harm's way (danger of tripping) and cannot be damaged. When connecting and disconnecting cables, observe the relevant notes in the chapter "[System expansions](#)".
- No data transmission cable should be connected or disconnected during a thunderstorm.
- Please ensure that no objects (e.g., necklaces, paperclips etc.) or liquids can get into the interior of the device (electrical shock, short circuit).
- In emergencies (e.g. damaged casing, elements or cables, penetration of liquids or foreign matter), switch off the notebook immediately, remove the power connector, remove the battery, and contact your sales office or customer service.
- Only qualified technicians may repair the device. Unauthorized opening or incorrect repair may greatly endanger the user (electric shock, fire risk).
- When cleaning the device, observe the relevant notes in the paragraph "[Cleaning the notebook](#)".
- Install only system expansions that satisfy the requirements and rules governing safety and electromagnetic compatibility and relating to telecommunications terminal equipment. If you install other expansions, you may damage the system or violate the safety regulations and regulations governing RFI suppression. Information on which system expansions are suitable can be obtained from the customer service or your sales office.
- Data cables to peripheral devices must be adequately shielded.
- Only use batteries designed for the this notebook.  
Take care not to drop the battery or otherwise damage its housing (risk of fire).  
If the battery fails, do not use it in the notebook.  
Do not touch the contacts of the battery.  
Never interconnect the positive and negative terminals of the battery.  
Used batteries must be disposed of in accordance with local regulations (special refuse).
- If the LCD display is damaged (e.g. glass broken), do not allow any escaping liquid to come into contact with skin, mucous membranes (eyes, mouth). Do not inhale vapors.  
Clean parts of the body and clothing that have already come into contact with such liquids with plenty of water and soap.
- The warranty expires if the notebook is damaged during the installation or replacement of system expansions.

- You may set only those resolutions and refresh rates specified in the chapter "[Technical data](#)" or in the operating manual of the monitor. Otherwise you may damage your monitor. If you are in any doubt, contact your sales office or customer service.
- Keep this Operating Manual together with the device. If you pass on the device to a third party, please also pass on the manual.

### **Note on the laser**

If your device is equipped with a CD-ROM drive, the following condition applies: The CD-ROM drive contains a light-emitting diode (LED), classified according to IEC 825-1:1993:LASER CLASS 1; it must not be opened.

### **Laserhänvisning**

Om din apparat är utrustad med en CD-ROM-enhet gäller följande: CD-ROM-enheten innehåller en ljusemitterande diod (LED), klassificerad enligt IEC 825-1:1993: KLASS 1 LASER APPARAT, och får därför inte öppnas.

### **Laserinformation**

Skal enheden forsynes med et CD-ROM drev gælder følgende: CD-ROM drevet indeholder en lysdiod (LED), klassificering iflg. IEC 825-1:1993:LASER KLASSE 1 og må derfor ikke åbnes.

### **Laserinformation**

Følgende gjelder hvis maskinen er utstyrt med en CD-ROM stasjon: CD-ROM stasjonen inneholder en lysutviklende diode (LED), som er klassifisert etter IEC 825-1:1993:LASER KLASSE 1, og skal derfor ikke åpnes.

### **Laser-ohje**

Jos laitteeseen on kytketty CD-ROM-asema: CD-ROM-asema sisältää valoa säteilevän diodin (LED), joka on luokiteltu määräyksen IEC 825-1:1993:LASER LUOKKA 1 mukaisesti. Tämän vuoksi asemaa ei saa avata.

- The lithium battery must be disposed of in accordance with local regulations concerning special waste.

**Warning**

The lithium battery of the device may only be replaced by one that is identical or by a type recommended by the vendor. If the lithium battery is not replaced in the proper manner, there is a danger of explosion (see the Operating Manual for your device).

**WARNING**

Explosionsfara vid felaktigt batteribyte. Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkarenfabrikanten. Kassera använt batteri enligt fabrikantens instruktion.

**ADVARSEL**

Lithiumbatteri - Eksplosionsfare ved fejlagtig håndtering. Udskiftning må kun ske med batteri af samme fabrikat og type. Lever det brugte batteri tilbage til leverandøren.

**ADVARSEL**

Eksplosjonsfare ved feilaktig skifte av batteri. Benytt samme batteritype eller en tilsvarende type anbefalt av apparatfabrikanten. Brukte batterier kasseres i henhold til fabrikantens instruksjoner.

**VAROITUS**

Paristo voi räjähtää, jos se on virheellisesti asennettu. Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin. Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

## Notes on installing and removing boards

Boards with ESDs (electrostatic sensitive devices) may be identified by the following label:

When you handle boards fitted with ESDs, you must observe the following points under all circumstances:

- You must always discharge yourself (e.g. by touching a grounded object) before working with boards containing ESDs.
- The equipment and tools you use must be free of static charges.
- Pull out the power plug before inserting or pulling out boards containing ESDs.
- Always hold boards with ESDs by their edges.
- Never touch pins or conductors on boards fitted with ESDs.

## Manufacturer's notes

### Energy saving

Make use of the notebook's power management features (see "[Preparation for use and operation](#)").

- If you do not use the notebook, switch it off.
- The notebook uses less power when the power management features are enabled. You will then be able to work for longer before having to recharge the battery.

## Energy saving under Windows 95

If a monitor with energy saving features is connected to your notebook, you can use the *Screen Saver* tab to set the energy saving features of the monitor. Select the following item in the start menu: *Settings - Control Panel - Display - Display Properties - Screen Saver - Energy saving features of monitor*. You can set further energy saving functions using *Start - Settings - Control Panel - Energy - Advanced*.

## Disposal and recycling

This device has been manufactured to the greatest possible degree from materials which can be recycled or disposed of in a manner that is not environmentally damaging. The device is taken back after use, so that it or its materials can be recycled, provided that it is returned in a condition which is the result of normal use. Any components not recuperated will be disposed of in an environmentally acceptable manner.

Do not throw lithium batteries or accumulators into the trashcan. They must be disposed of in accordance with local regulations concerning special waste.

If you have any questions on disposal, please contact your local office, our service department, or, directly:

Siemens Nixdorf Informationssysteme AG  
Recycling Center  
D-33094 Paderborn

Tel.: ..49 5251 720 810/Fax: ..49 5251 720 815

## CE certificate

This device complies with the requirements of the EEC directive 89/336/EEC "Electromagnetic compatibility" and 73/23/EEC "Low voltage directive" with amending directive 93/68/EEC.

## RFI suppression

All other devices connected to this product must have RFI suppression in accordance with EC directive 89/336/EEC. Products meeting these requirements are accompanied by a certificate issued by the manufacturer and carry the CE symbol.

## FCC Class B Compliance Statement

If there is an FCC identifier on the device, then:

The following statement applies to the products covered in this manual, unless otherwise specified herein. The statement for other products will appear in the accompanying documentation.

### NOTE:

This equipment has been tested and found to comply with the limits for a "Class B" digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in strict accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

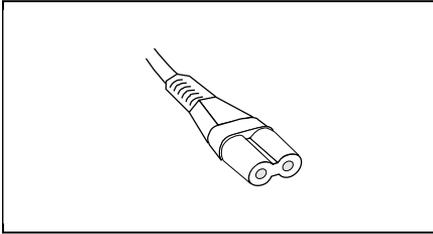

Siemens Nixdorf Informationssysteme AG is not responsible for any radio or television interference caused by unauthorized modifications of this equipment or the substitution or attachment of connecting cables and equipment other than those specified by Siemens Nixdorf Informationssysteme AG. The correction of interferences caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.

The use of shielded I/O cables is required when connecting this equipment to any and all optional peripheral or host devices. Failure to do so may violate FCC rules.

This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

## **Important notice concerning power cord selection**

The power cord for this unit has been packed separately and has been selected according to the country of destination. It must be used to prevent electric shock. Use the following guidelines if it is necessary to replace the original cord set.

The female receptacle of the cord set must meet IEC 320 requirements (see Figure 1).

### **For the United States and Canada**

Use a UL listed and CSA labeled cord set consisting of a two conductor cord with a maximum length of 15 feet.

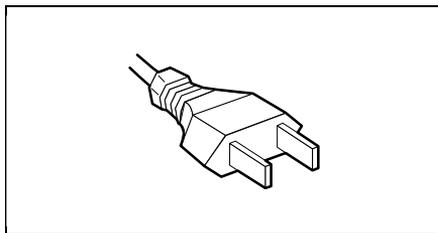

For units which stand on a desk or table, type SVT or SJT cord sets shall be used.

For units which stand on floor, only SJT type cord sets shall be used.

The cord set must be selected according to the current rating for your unit. Please consult Table A for the selection criteria for power cords used in the United States and Canada.

**Table A:**

Cord Type	Size of Conductors in Cord	Maximum Current Rating of Unit
SJT	18 AWG 16 AWG 14 AWG	10 Amps 12 Amps 12 Amps
SVT	18 AWG 17 AWG	10 Amps 12 Amps

**For units set at 115 V:**

use a parallel blade attachment plug rated 15 A, 125 V.

**For units set at 230 V (outside of the United States and Canada):**

use a cord set consisting of a minimum AWG according to Table A and an attachment plug rated 15 A, 250 V. The cord set should have the appropriate safety approvals for the country in which the equipment will be installed and should be marked HAR.

## Optimum battery capacity

Before a battery is used for the first time, the battery learning cycle should be performed (see also the section "[Learning cycle for batteries under Windows 95](#)"). To utilize the optimum charging capacity of the nickel-metal hydride battery, you should regularly perform the battery learning cycle for this battery.

If a lithium ion battery is to be stored over a long period of time, it should always be stored in a discharged state to prevent loss of capacity through self-discharge. To discharge the battery, leave your notebook switched on until the battery is completely empty.

## On the move with the notebook

Please observe the points listed below when transporting your notebook.

### Transporting the notebook

- Do not carry the notebook by its open screen or by its battery compartment if the battery is removed.
- Switch the notebook off and close the LCD display and the covers for the ports and the PC cards (PCMCIA cards).
- Always use the bag supplied when transporting the notebook. If it needs to be shipped, use the original packaging or other suitable packaging to protect it from damage through mishandling.
- Protect the notebook from severe shocks and extreme temperatures (e.g., direct sunlight in a car).

### Before starting the journey

- Copy important data from the hard disk to a floppy disk.
- If you wish to use your notebook during a flight, check first with the flight attendants if it is permissible to do so.
- If you are travelling abroad, ensure that the power adapter can be operated on the local line voltage. If this is not the case, obtain the appropriate power adapter for your notebook.  
Do not use any other voltage transformers!

## Cleaning the notebook

Switch the notebook off and pull the power plug of the power adapter out of the grounded-contact power socket.

Do not clean any interior parts yourself, leave this job to a service technician.

Do not use any cleaning agents that contain abrasives or may corrode plastic.

Ensure that no liquid enters the Notebook.

Wipe the housing with a dry cloth, or if particularly dirty, use a cloth which has been moistened in mild domestic detergent and then carefully wrung out. To clean the keyboard and the touchpad, you can use disinfectant wipes. Wipe the monitor housing with a soft, moistened cloth.

---

# Preparation for use and operation

Pay attention to the relevant safety notes provided in chapter "Important notes".

You must charge the battery and install the operating system, application programs and drivers before you can work with the notebook.

When used away from a wall power outlet, the notebook runs on its built-in battery. You can increase battery life by enabling its power management features.

If you use the notebook in a normal office situation, you run it off the mains with the aid of the power adapter, or in a MobiDock or QuickPort/QuickPort Plus.

Refer to the chapter on "[System expansions](#)" for instructions on how to connect external devices (e.g. mouse, printer) to the notebook.

## Unpacking and checking the delivery

- ▶ Unpack all the individual parts.
- ▶ Check the delivery for damage incurred during transport.
- ▶ Check whether the delivery agrees with the details in the delivery note.
- ▶ Check whether all necessary details have been entered on the first page of the guarantee coupon booklet.

Should you discover that the delivery does not correspond to the delivery note, notify your local sales office immediately.

We recommend that you keep the original packaging in case you need to ship the equipment again.

# Choosing where to set up your notebook

Select a suitable location for the notebook before setting it up. Bear the following points in mind when looking for a location.

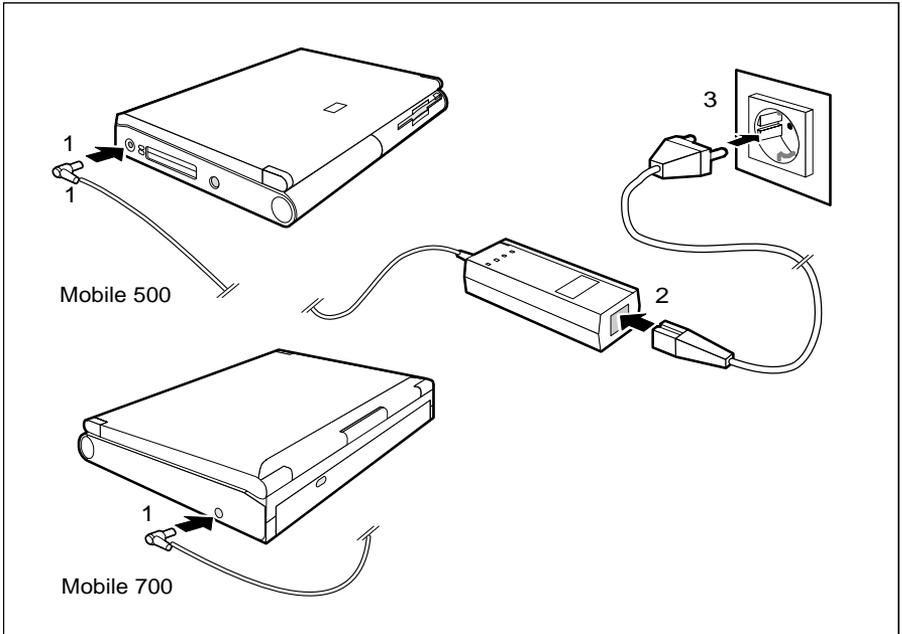

- We recommend that you place your notebook on a surface with good anti-slip qualities. In view of the multitude of different finishes and varnishes used on furniture, it is possible that the rubber feet of the devices will mark the surface they stand on.
- Do not expose the notebook to extreme environmental conditions. Protect it from dust, humidity and heat.
- Keep other objects 100 mm clear of the notebook and its power adapter to ensure adequate ventilation. The space between the notebook's feet must be clear.. Do not place it on a soft surface (e.g., a carpet or soft furnishings). Do not cover the ventilation slots in the notebook and the power adapter.
- The power adapter must be at least 200 mm away from the notebook. It must be free-standing and may not be covered. Do not stand the power adapter on heat-sensitive material.
- For wireless data transfer you must align the notebook's infrared interface with that of the partner device (e.g. PC). The devices must not be more than one meter apart.

## Preparing the notebook for use

The supplied power cord conforms to the requirements of the country in which you purchased your notebook. Make sure that the power cable is approved for use in the country in which you intend to use it. The notebook and the power adapter should be at least 200 mm apart. Keep other objects 100 mm clear of the notebook and its power adapter. Do not cover the ventilation slots in the notebook and the power adapter.

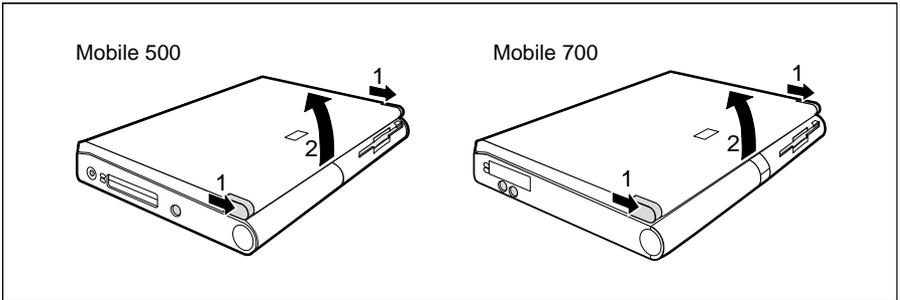

- ▶ Place the notebook on a level, stable surface.

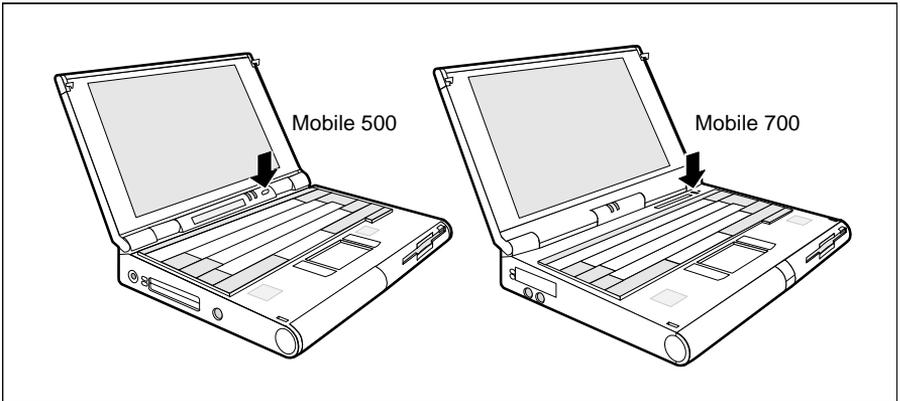

- ▶ Plug the DC output connector on the power adapter into the DC input connector (DC IN) on the notebook (1).
- ▶ Connect the AC power cable to the power adapter (2).
- ▶ Plug the power cable into the grounded power outlet (3).

In this state, a built-in battery is charged. When the notebook is switched off, the Nickel-metal hydride battery will charge in roughly two hours and the Lithium Ion battery in roughly four hours. If the notebook is switched on, it will charge in roughly five hours.

## Switching on the notebook

- ▶ Slide forward the release tabs (1) and swing open the screen (2).

- ▶ Press the ON/OFF switch (3) for roughly one second.

When you switch on your Notebook for the first time the supplied software is set up and configured. Please follow the instructions on the screen. If you want to partition your hard disk, please refer to chapter "[Troubleshooting and tips](#)" - "[Restoring the hard disk contents under Windows 95](#)".

If you have assigned the user password, you must enter this when requested to do so, in order to start the operating system.

Once you have installed the operating system and have generally familiarized yourself with the notebook, you should perform the battery learning cycle (see "[Learning cycle for batteries under Windows 95](#)").

You must not switch off or warm-boot your notebook during first-time installation .

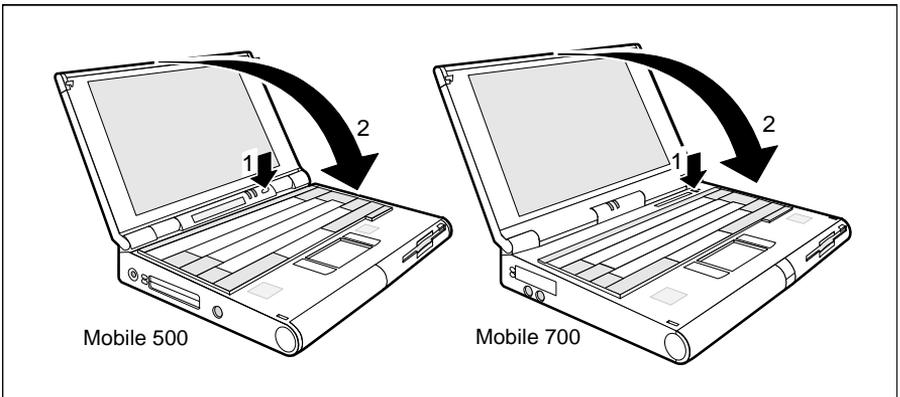

### Notes on Windows 95 and Windows NT

The license number for Windows 95 or Windows NT is printed on the front cover of the Windows 95/ Windows NT manual supplied.

If you do not have a Windows 95 OEM CD (that is if your system is not equipped with a CD-ROM drive), you should create a backup copy after installing Windows 95 so that you can restore the hard disk contents in an emergency. You need about 40 diskettes for this.

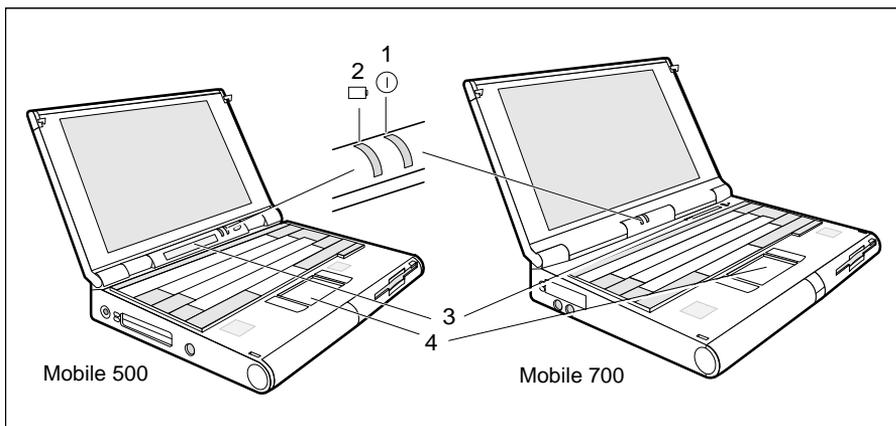

- ▶ Generate the system and driver diskettes using the *Create Driver Disks* icon.

## Switching off the notebook

- ▶ Shut down the operating system properly. If Windows 95 is installed, the system is shut down and the notebook is switched off. If the notebook is not switched off automatically, press the ON/OFF switch (1) for approx. one second.
- ▶ Close the display of the notebook (2) so that it locks into place on the left and right.

## Displays and input devices

1 = POWER LED  
2 = BATTERY LED

3 = Display field  
4 = Touchpad with touchpad buttons

## Displays

The notebook has two LEDs and an LCD-type display field.

### POWER LED

The POWER LED is on when the notebook is switched on.  
The LED flashes when the notebook is switched to standby mode.

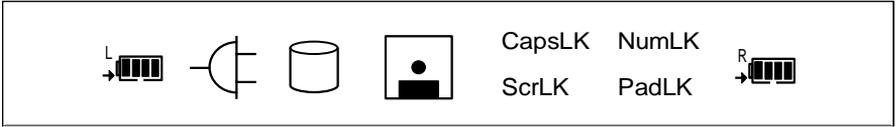

### BATTERY LED

The BATTERY LED is on when the battery is charging.  
The BATTERY LED flashes when battery power has dropped to below 20%.  
The frequency with which it flashes increases before the notebook shuts itself down.

## Display field

Symbols and texts in the display field indicate the operating state of the notebook. The meaning of the symbols and texts are as follows:

 indicates the status of the battery.  
L indicates that the information applies to the battery in the left compartment.  
R indicates that the information applies to the battery in the right compartment.

 The arrow indicates that the battery is charging.

 indicates that the battery is 80%-100% charged.

 indicates that the battery is 60%-80% charged.

 indicates that the battery is 40%-60% charged.

 indicates that the battery is 20%-40% charged.

 indicates that the battery is less than 20% charged..

 indicates that the notebook is connected to an external power source (e.g. via the power adapter).

 indicates that the internal hard disk or a drive in the left compartment (CD-ROM, MOD) of the notebook is being accessed. You must not remove the CD-ROM or the MOD when this symbol is visible.

## Preparation for use and operation

---

indicates that the floppy disk in the floppy disk drive is being accessed.

You must not remove the floppy disk when this symbol is visible.

CapsLK

indicates that all the characters you type will appear as uppercase. In the case of overlay keys, the character on the upper left on the keycap appears when that key is pressed. The CapsLock indicator appears when you press the  key.

ScrLK

The NumLock indicator appears when you press the  key. The effect this key has varies from program to program.

NumLK

The NumLock indicator appears when you press the  key. If PadLK is also visible in the function display, the blue numbers on the lower right on keys in the integrated numeric keypad are enabled.

PadLK

The PadLock indicator appears when you press the  +  key. This enables the blue editing functions on the upper right on keys in the integrated numeric keypad.

## Touchpad and touchpad buttons

Make sure that the touchpad does not come into contact with dirt, liquids or grease.

Do not touch the touchpad if your fingers are dirty.

Do not rest heavy objects (e.g., books) on the touchpad or the touchpad buttons.

The touchpad enables you to move the mouse pointer on the screen. If, for example, you move one finger to the left over the touchpad, the mouse pointer also moves to the left.

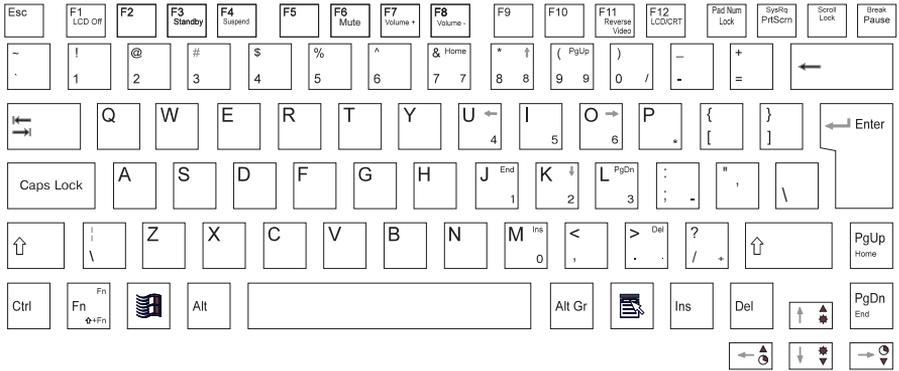

A brief tap with the finger on the touchpad has the same effect as clicking with the left mouse button. A brief "double-tap" with the finger on the touchpad has the same effect as double-clicking with the left mouse button.

The left and right touchpad buttons have the same functions as the left and right mouse buttons.

If you attach and install an external mouse, the touchpad and its buttons are disabled. If you attach an external serial mouse, you must select the *Disabled* option for the *Internal Mouse* field in the *Main Setup*. This also releases interrupt 12, so that you can use it for other applications.

## Keyboard

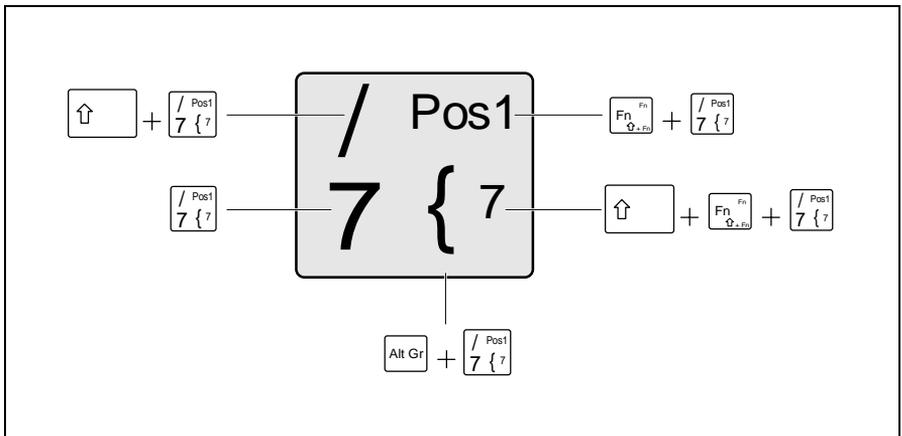

The following description of keys and key combinations refers to Windows 95.

Additional functions supported by the keys are described in the relevant manuals supplied with your application programs.

The figure below shows how to access the different characters and editing functions on keys with overlaid functions.

The keystrokes shown in the example only work if CapsLk, NumLk, and PadLk have not been enabled (i.e., they are not visible in the display field).

Example: German keyboard

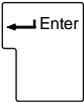

### Backspace

The Backspace key deletes the character to the left of the cursor.

### Tab key

The Tab key moves the cursor to the next tab stop.

### Enter key (also, Return or Carriage Return)

The Enter key tells the computer that the command line entered is complete. The command you have entered is executed when you press Enter.

### Caps Lock

The Caps Lock key shifts the alphabetic characters on the keyboard to uppercase. (When it is enabled, the `CapSLK` symbol appears in the display field.) In the case of overlay keys, the character on the upper left on the keycap appears when that key is pressed. To cancel the Caps Lock function, simply press the Caps Lock key again.

### Shift

The Shift key causes uppercase characters to appear. In the case of overlay keys, the character on the upper left on the keycap appears when that key is pressed.

### Alt Gr

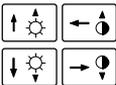

The `Alt Gr` key causes the characters in the lower middle of the keycap to appear (e.g., / in the case of the `0`) key.

### Fn

The `Fn` key enables the special functions indicated in blue on overlay keys (see "Key combinations").

If the external keyboard does not feature a `Fn` key, you can simultaneously press the `Ctrl` + `Alt Gr` keys instead.

### Cursor keys

The cursor keys move the cursor in the direction of the arrow, i.e., up, down, left, or right.

## Preparation for use and operation

### Pad Num

When the numeric keypad is enabled (PadLK is visible in the display field), the **Pad Num** key causes this set of keys to produce numbers (NumLK appears in the display field). Pressing them produces the blue characters shown on the bottom right on the keycaps.

### Pause

The **Pause** key temporarily suspends display output. Output will resume when you press any other key.

### Start key

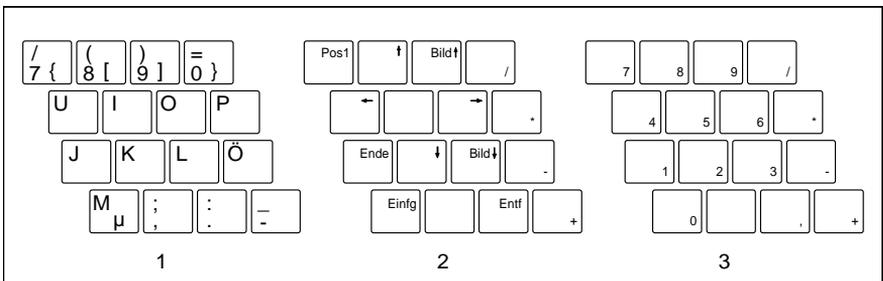

invokes the *START* menu of Windows 95.

### Menu key

invokes the menu for the marked object.

## Numeric keypad

Example: German keyboard

- 1 = Characters enabled when neither NumLK, nor PadLK are visible in the display field.
- 2 = Editing functions enabled when PadLK is visible in the display field.
- 3 = Characters enabled when NumLK and PadLK are visible in the display field.

The key combination **Fn** + **Pad Num** enables and disables the integrated numeric keypad. If the numeric keypad is enabled PadLK is visible in the display field. This enables the blue editing functions on the upper right on keys in the integrated numeric keypad.

If PadLK is visible in the display field, pressing the **Pad Num** key enables and disables the numeric functions of the keys in the integrated numeric keypad. If the numeric functions of the keys are enabled NumLK is visible in the display field. Pressing them produces the blue characters shown on the bottom right on the keycaps.

If PadLK and/or NumLK are visible in the display field, the keys in the integrated numeric keypad will also produce the standard characters shown on the keys. If you press and hold the **Fn** key, the keys will produce lowercase letters and numbers.

If you press and hold the key combination **Fn** + Shift, the keys will produce uppercase letters and the characters indicated on the upper left of the keycaps.

## Key combination

The following description of keys and key combinations refers to Windows 95

Some of the following key combinations may not function in other operating systems and with some device drivers.

Other key combinations are described in the relevant manuals supplied with your application programs.

You enter key combinations as follows:

- ▶ Press and hold the first key in the combination.
- ▶ While keeping the first key pressed, press the other key or keys in the combination.

If the external keyboard does not feature a **Fn** key, you can simultaneously press the **Ctrl** + **Alt Gr** keys instead.

### Start the BIOS Setup

If the message *Press F2 for Setup* appears when you start your notebook, you can run the *BIOS Setup* by pressing the key combination indicated.

### Switch the display on/off

This key combination switches your notebook's display on and off. Doing so does not affect any running programs.

### Enable Standby mode

This key combination enables Standby mode. *Standby* appears in the display field.

You can cancel Standby mode by pressing any key.

### Enable Suspend mode

This key combination enables Suspend mode.

When you switch the notebook on again, it returns to the same place you were in the program that was running when you switched to Suspend mode.

### Switch the loudspeaker on/off

This key combination switches your notebook's integrated loudspeaker on and off.

### Loudspeaker louder

This key combination raises the volume of the integrated loudspeaker.

### Loudspeaker quieter

This key combination decreases the volume of the integrated loudspeaker.

### Switch between normal and reverse video

If your notebook has a monochrome or DSTN color display, this key combination switches it between normal and reverse video.

### Select internal/external display

If an external display is connected to your notebook, you can switch to it with this key combination. You can opt to use:

- just the notebook's internal display
- just the external display
- both the internal and the external display.

### Enable/disable the integrated numeric keypad

This key combination enables and disables the integrated numeric keypad. If the numeric keypad is enabled *PaDLK* is visible in the display field. This enables the blue editing functions in the integrated numeric keypad.

### Reduce the display contrast

If your notebook has a DSTN color display, this key combination reduces its contrast.

### Increase the display contrast

If your notebook has a DSTN color display, this key combination increases its contrast.

### Increase the display brightness

This key combination increases the brightness of the display.

### Reduce the display brightness

This key combination reduces the brightness of the display.

### Halt the current operation

This key combination can be used to halt an operation instantly (its effect depends on the program that is running).

### Halt the current operation

This key combination can be used to halt an operation instantly without clearing the keyboard buffer.

### Warm boot

This key combination triggers a reset and warm-boots the notebook.

### Backtab (Shift+Tab)

This key combination moves the cursor back to the previous tabular stop.

### Floppy disk drive

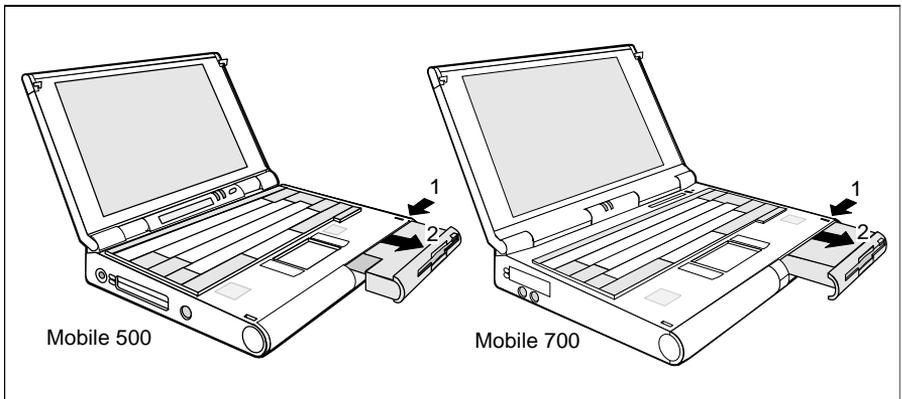

Use only the floppy disk drive designed for this notebook.  
Do not use force when installing or removing the floppy disk drive.  
Make sure that no foreign objects enter the slots.

The disk drive can also be removed or installed while in operation (but not when the disk drive is being accessed).

### Removing the floppy disk drive

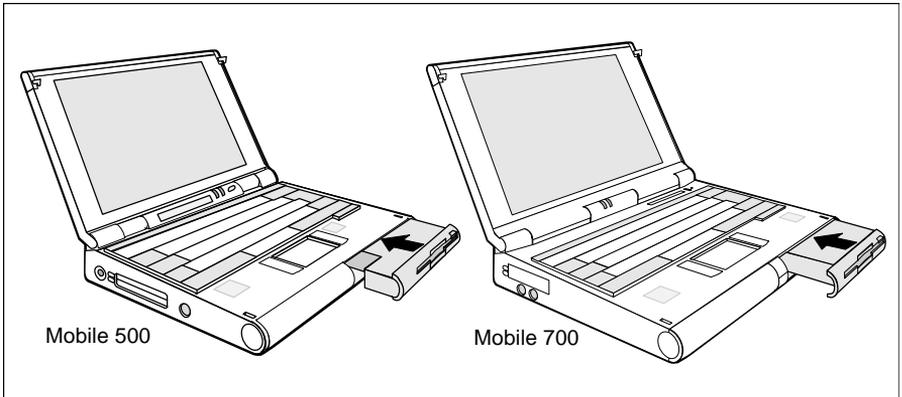

- ▶ Swing open the display.
- ▶ Place the notebook on a level, stable surface.

- ▶ Press the disk drive's unlock button (1).
- ▶ Pull the disk drive out of the slot (2).

## Installing the floppy disk drive

- ▶ Swing open the display.
- ▶ Place the notebook on a level, stable surface.

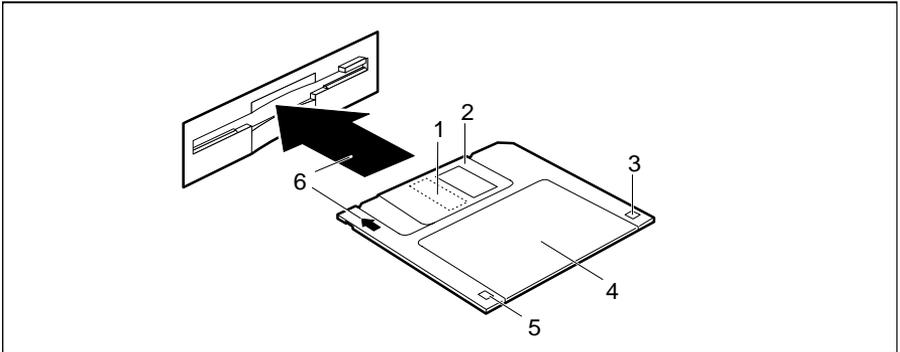

- ▶ Place the floppy disk drive in the right-hand slot so that the contacts enter first. The floppy disk drive's eject button must point outwards to the right.
- ▶ Push the floppy disk drive into the slot until you feel it locking into place.

### Working with floppy disks

Follow the instructions supplied by the vendor of the floppy disks.

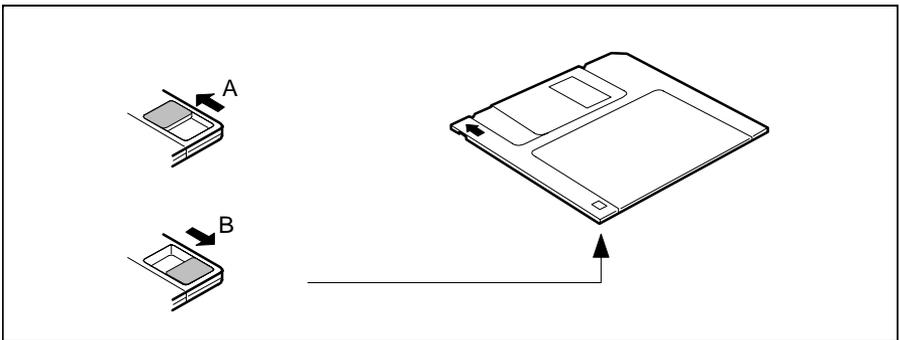

Never clean the floppy disk drive with cleaning disks. Even just one attempt would destroy the read/write head in the disk drive within 20 seconds.

1 = Slot for read/write head  
2 = Sliding metal cover  
3 = Hole for recognition of  
HD (High Density) disks

4 = Label area  
5 = Write protection area  
6 = Insertion direction

### Preventing write operations to floppy disk

A = floppy disk is not write protected

B = floppy disk is write protected

## Drives in the left slot

In the Mobile 700 notebook you can install an additional drive in the left slot. This additional drive can be:

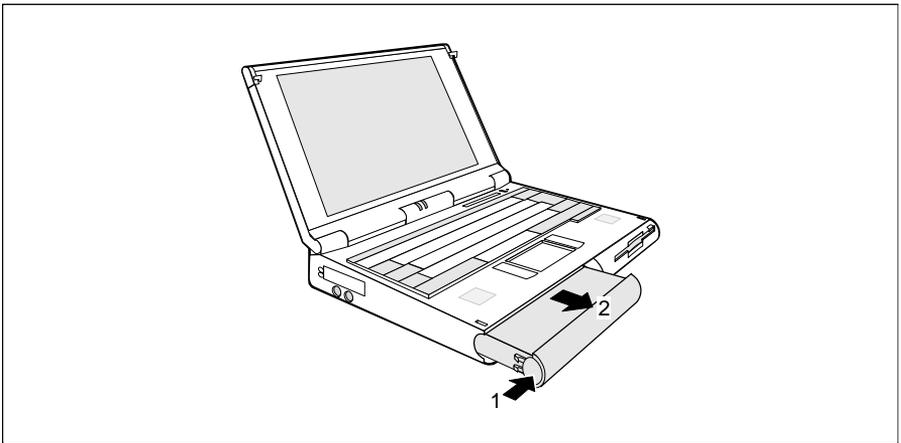

- a CD-ROM drive
- a MOD drive
- a second hard disk drive

Only use drives designed for the this notebook.  
Do not use force when installing or removing the disk drive.  
Make sure that no foreign objects enter the slots.

## Installing a drive

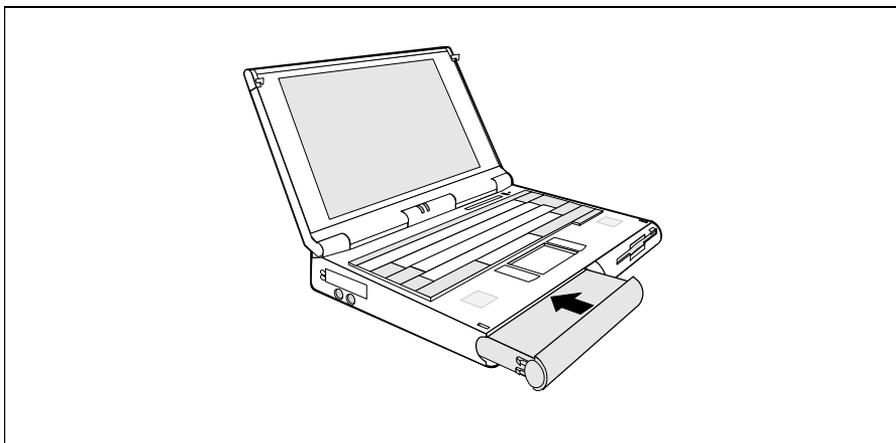

- ▶ Switch off the notebook.
- ▶ Swing open the display.
- ▶ Place the notebook on a level, stable surface.

- ▶ Press the unlock button on the left module (e. g. the battery) (1).
- ▶ Pull the module out of the left slot (2).

## Preparation for use and operation

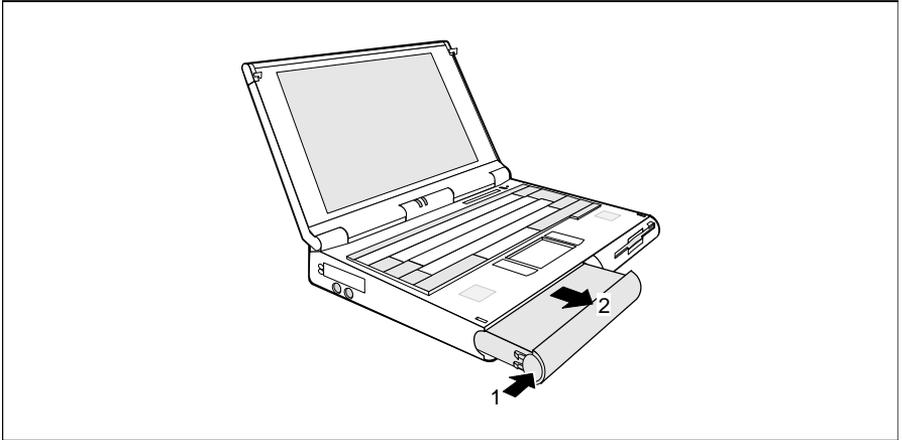

---

- ▶ Place the drive in the lefthand slot so that the contacts enter first. The disk drive's eject button must point outwards to the left.
- ▶ Push the disk drive into the slot until you feel it locking into place.

### Removing a drive

- ▶ Switch off the notebook.
- ▶ Swing open the display.
- ▶ Place the notebook on a level, stable surface.

- ▶ Press the disk drive's unlock button (1).
- ▶ Pull the disk drive out of the slot (2).

### Operating the CD-ROM drive

Avoid touching the surface of a CD. Handle CDs only by their edges!

Always store CDs in their cases. You avoid dust contamination, scratches, bending or other damage.

Protect your CDs from dust, mechanical vibration and direct sunlight!

Avoid storing a CD in areas subject to high temperatures or humidity.

You may use both 8-cm and 12-cm CDs.

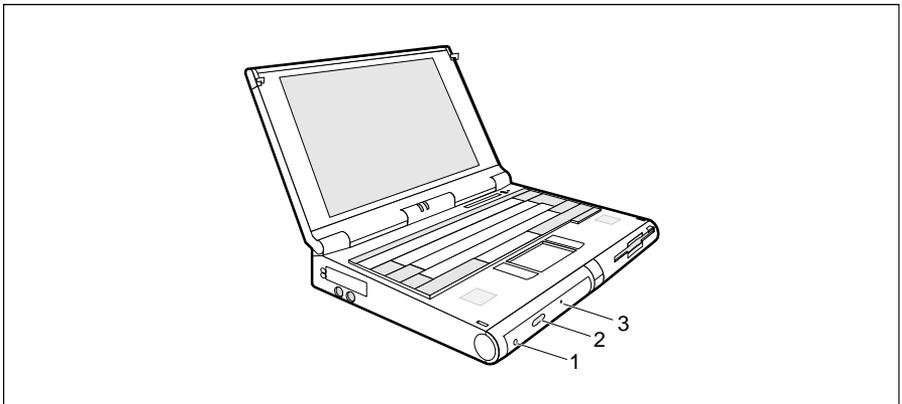

When using CDs of minor quality vibrations and reading errors may occur.

## Preparation for use and operation

---

The following CD formats are supported by the CD-ROM drive:

- CD-Digital Audi
- CD-ROM (Mode 1 and Mode 2)
- CD-ROM XA  
(Mode 2, Form 1 and Form 2)
- CD-I (Mode 2, Form 1 and Form 2)
- CD-I Ready
- CD-Bridge
- Photo-CD (Single- and Multisession)
- Video-CD

- 1 = Power On display  
2 = Insert/eject button  
3 = Button for opening by hand

### Power On display

The Power On display (1) flashes when a CD is inserted. It goes out when the drive is ready for reading.

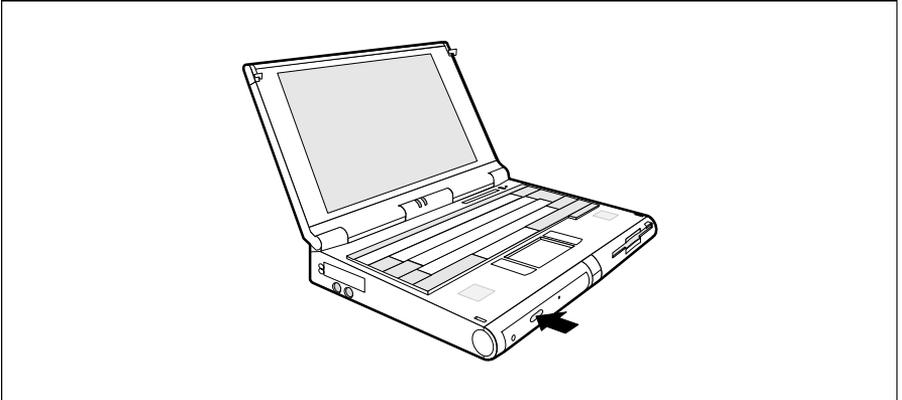

If the display does not go out after the CD is inserted, and continues to flash, the CD is probably damaged or dirty.

The Power On display remains lit while the CD-ROM drive is being accessed.

### Inserting or removing a CD

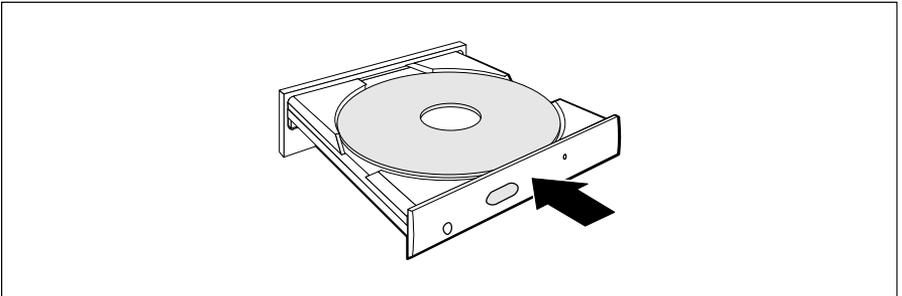

The notebook must be switched on.

- ▶ Push the insert/eject button.

The CD tray opens.

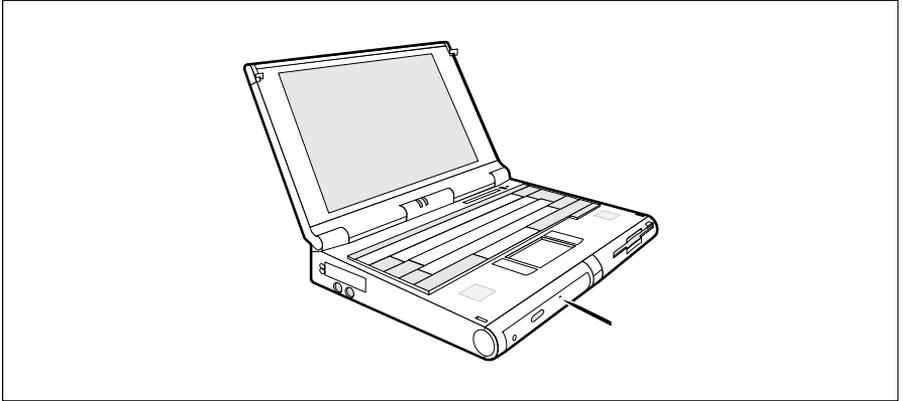

- ▶ Pull the CD tray completely out.

- ▶ Place the CD in the CD tray with the labeled side facing upwards, and carefully push the CD into the mount or remove an inserted CD.
- ▶ Push the CD tray in until you feel it locking into place.

### Opening the CD tray by hand

In the event of a power failure or damage to the drive it may be necessary to manually remove the CD.

- ▶ Switch off the notebook.
- ▶ Press a piece of wire (e. g. a paper clip) firmly into the opening.

The CD tray is unlocked. You can pull the CD tray out of the drive.

### Operating the MOD drive

Follow the instructions supplied by the vendor of the MO disks and the following notes:

Do not move the protection against accidental contact on the MO disk.

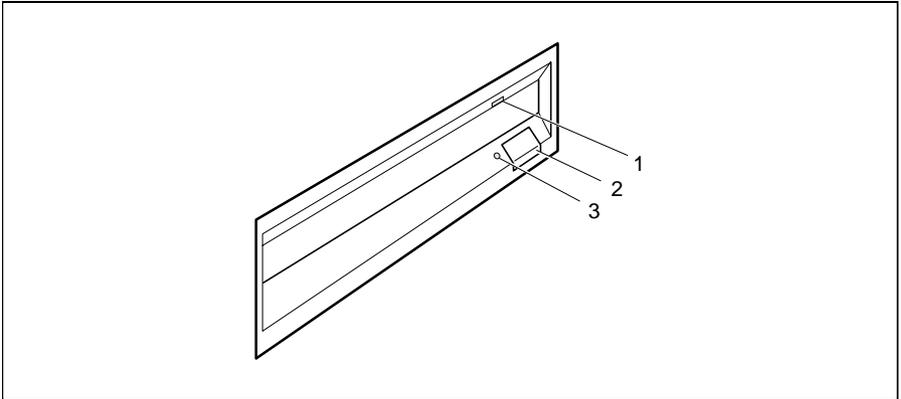

Protect your MO disk from dust, mechanical vibration, heat, direct sunlight and strong magnetic fields!

Do not use the MO disk during large fluctuations in temperature or humidity.

Do not drop the MO disk.

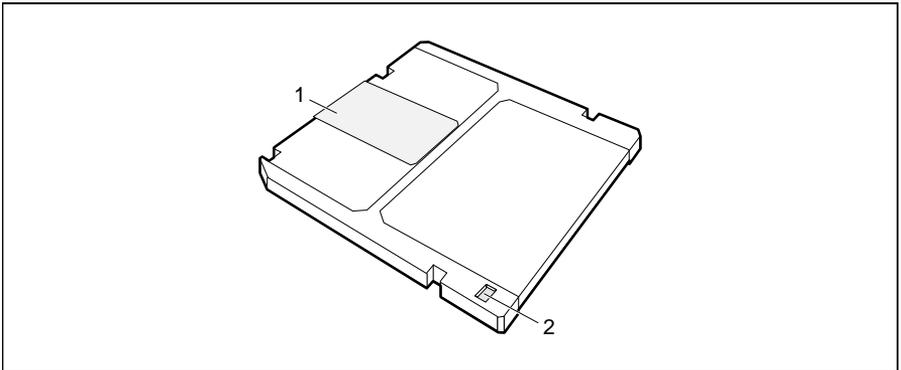

Always transport the MO disk in its protective cover.

Never clean the MOD drive with cleaning disks. Even just one attempt would destroy the read/write head in the disk drive within 20 seconds.

- 1 = Power On display
- 2 = Insert/eject button
- 3 = Button for opening by hand

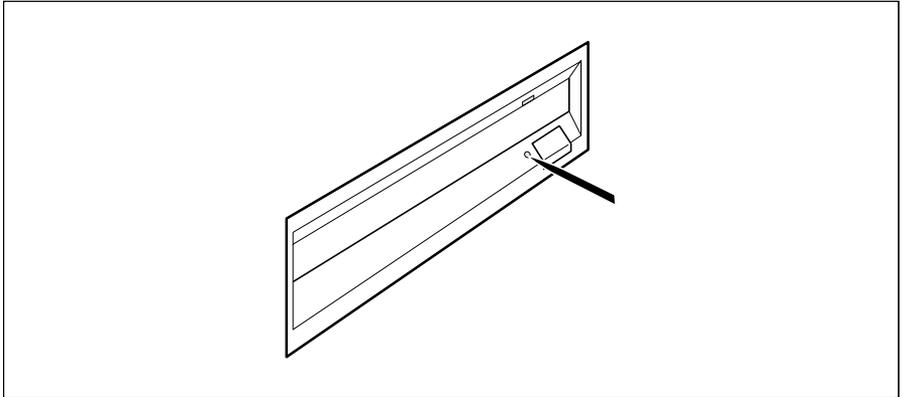

### Preventing write operations to MO disks

- 1 = Sliding metal cover
- 2 = Write-protection

### Removing the MO disk by hand

In the event of a power failure or damage to the drive it may be necessary to manually remove the MO disk.

- ▶ Switch off the notebook.
- ▶ Push a piece of wire (such as a paper clip) into the emergency removal opening.
- ▶ Remove the MO disk from the MOD drive.

## PC cards (PCMCIA cards)

In the notebook Mobile 500, you can install either two 3.3 mm (type I) or 5.5 mm (type II) PC cards (former name: PCMCIA cards), or one 10.5 mm (type III) PC card.

In the notebook Mobile 700, you can install either one 3.3 mm (type I) or 5.5 mm (type II) PC card (former name: PCMCIA cards), and one 10.5 mm (type III) PC card.

The PC card must not consume more than 600mA (at +5V) or 60mA (at +12V).

Consult the documentation supplied by the card's manufacturer and follow the instructions provided.

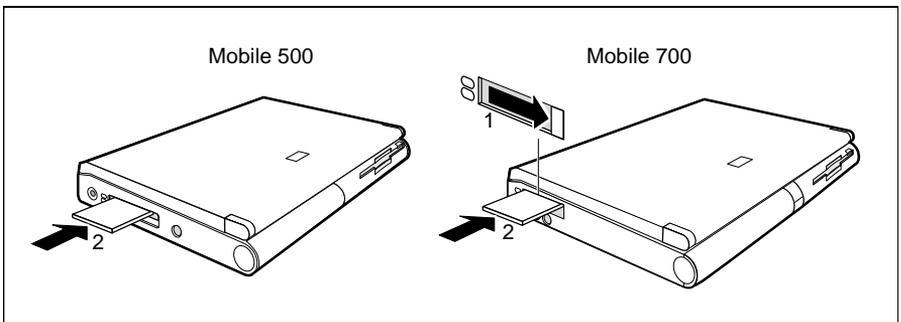

Never use force when inserting or removing a PC card.

Make sure that no foreign objects fall into the PC card slot.

## Zoomed video port

Your Mobile 700 Notebook is equipped with a Zoomed Video Port (ZV port). You can install an MPEG decoder card or a TV card or a videograber card in the lower PC card slot. Please contact one of our IT Service Shops or your local sales partner or office for advice on selecting a suitable ZV port card.

## Installing a PC card

- ▶ Only at notebook Mobile 700:  
Slide the cover in the direction of the arrow as far as it will go (1).
- ▶ Insert the PC card, contacts first, into the slot guides (2). The labeled side of the PC card must be facing upwards.
- ▶ Gently push the PC card into the slot until you feel it click into place.

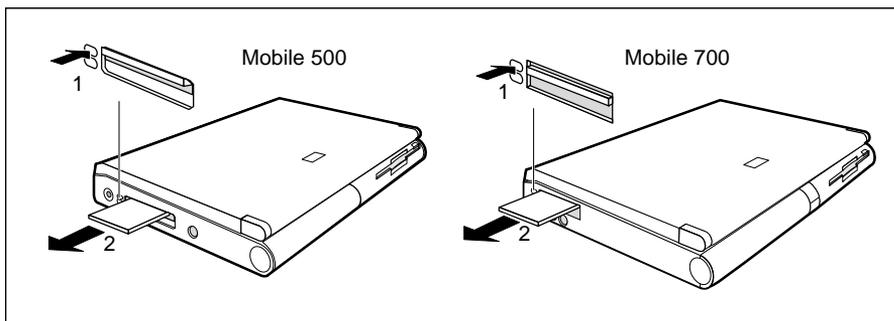

Consult the documentation supplied with the PC card for information on how to install the necessary device drivers.

For further information refer to the information files (\*.txt, \*.doc, \*.wri) provided with the PC card driver diskette or in the Windows 95 manual. Only at notebook Mobile 700:

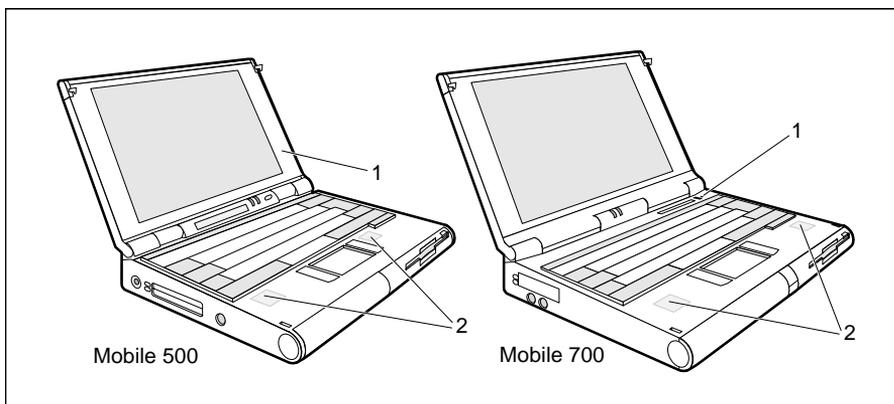

If you are using PC cards that do not connect to external devices, close the PC card slot cover.

### Removing a PC card

- ▶ Only at notebook Mobile 700:  
Open the PC card slot cover.
- ▶ Press the eject button (1). It will project further out of the notebook's case.
- ▶ Slide the PC card out of the notebook (2).

### Microphone and loudspeaker

1 = built-in microphone

2 = built-in loudspeaker

Your notebook contains a built-in microphone (1) and a loudspeaker (2).

If you attach an external microphone, the built-in microphone is disabled. If you attach an external loudspeaker, the built-in loudspeaker is disabled.

## Using power-management features

The notebook uses less power when the power management features are enabled. You will then be able to work for longer before having to recharge the battery.

If you will not be using your notebook for a longer period, switch it off. Reducing the brightness level of the display helps to reduce the amount of power consumed by the notebook.

If you enable one of the power-management options in the *Power* menu of the *BIOS Setup*, that option will still be enabled the next time you switch on your notebook.

## Long Life mode

Long Life mode uses all the available power-management features. The notebook uses little power and operates slightly slower than usual.

### Enabling Long Life mode

- ▶ In the *Power Setup* menu set the *APM* field to *Enabled* and the *Power Savings* field to *Maximum Battery Life*.
- ▶ In the *Power Setup* menu set the *PM Control* field to *Always Enable* or to *Battery Powered Only*.

### Disabling Long Life mode

- ▶ In the *Power Setup* menu set the *PM Control* field to *Disabled*.

## Doze mode

In Doze mode the notebook reduces its processor speed if it is inactive for a longer period. The processor speed is increased as soon as the system is used again.

Doze mode is not available if the notebook is attached to a MobiDock.

### Enabling Doze mode

- ▶ In the *Power Setup* menu set the *Power Savings* field to *Customize* and the *Hardware Dozemode* field to *Enable*.

or

- ▶ In the *Power Setup* menu set the *Power Savings* field to *Maximum Battery Life*.

### Standby mode

In Standby mode the notebook's system clock is suspended and its display and hard disk motor are shut down.

### Enabling Standby mode

- ▶ Press the key combination **Fn** + **F3**.

### Disabling Standby mode

- ▶ Press any key to continue.

### Automatic activation

If the notebook is running and is not used for a predefined period of time, it switches into Standby mode. Any input causes the notebook to come out of Standby mode.

- ▶ In the *Power Setup* menu set the *Power Savings* field to *Customize* and set the time which has to elapse before the notebook switches to Standby mode in the *Standby Timeout* field.

or

- ▶ In the *Power Setup* menu set the *Power Savings* field to *Maximum Performance* or *Maximum Battery Life*.

### Suspend mode

In suspend mode, all current data (active programs, files) is saved to the hard disk or buffered in the memory, and the notebook is switched off.

#### Suspend to Disk

The active data can only be saved if sufficient space is available on the hard disk (at least the main memory size + 2 Mbytes). If you are running the operating system OS/2 or Windows NT, you have to set up an additional FAT partition on the hard disk as drive C: (see the manuals supplied with the operating system in question).

#### Suspend to DRAM

The current data is buffered in the memory (DRAM). The data is stored for as long as the notebook is supplied with energy. If the battery is full, the data is stored for a matter of days. Without a battery and without a power supply the data is stored for only around 5 minutes.

#### Enabling Suspend mode

If your notebook is in Suspend mode:

- do not connect any external peripheral devices
- do not disconnect any external peripheral devices
- do not attempt to switch it on if the built-in battery is empty
- do not change or remove the floppy disk, if inserted
- do not add or remove RAM
- do not add or remove any PC cards

- ▶ Press the key combination **[Fn]** + **[F4]**.

#### Disabling Suspend mode

- ▶ Switch on the notebook.  
The notebook reverts to the status it had prior to switching into Suspend mode.

### Automatic activation

If the notebook is running and is not used for a predefined period of time, it switches into Suspend mode.

- ▶ In the *Power Setup* menu set the *Power Savings* field to *Customize* and set the time which has to elapse before the notebook switches to Standby mode in the *Suspend Timeout* field.
- ▶ Set the *Suspend Mode* field to *Save to Disk* or *Save to DRAM*.

or

- ▶ In the *Power Setup* menu set the *Power Savings* field to *Maximum Performance* or *Maximum Battery Life*.
- ▶ Set the *Suspend Mode* field to *Save to Disk* or *Save to DRAM*.

## Display

Switching off the display does not affect running programs.

### Switching on the display

- ▶ Press the key combination **Fn** + **F1**.

### Switching off the display

- ▶ Press the key combination **Fn** + **F1**.

### Automatic powerdown

You set this function in the *BIOS Setup*.

If the notebook receives no input for a predefined period of time, the display switches off automatically. It switches on again automatically as soon as the notebook receives input.

- ▶ In the *Power Setup* menu set the *Power Savings* field to *Customize* and set the time which has to elapse before the display switches off in the *Video Timeout* field.

or

- ▶ In the *Power Setup* menu set the *Power Savings* field to *Maximum Performance* or *Maximum Battery Life*.

## Hard disk's power-management feature

If the hard disk is not accessed for a predefined period of time, its motor switches off automatically. It switches on again automatically the next time the hard disk is accessed.

### Enabling the hard disk's power-management feature

- ▶ In the *Power Setup* menu set the *Power Savings* field to *Customize* and set the time which has to elapse before the motor of the hard disk switches off in the *Hard Disk Timeout* field.

or

- ▶ In the *Power Setup* menu set the *Power Savings* field to *Maximum Performance* or *Maximum Battery Life*.

## Loudspeaker

### Disabling the loudspeaker

- ▶ Press the key combination **Fn** + **F6**.

### Enabling the loudspeaker

- ▶ Press the key combination **Fn** + **F6**.

### Disabling the loudspeaker in BIOS Setup

- ▶ In the *Advanced Setup Integrated Peripherals* menu set the *On Board Audio* field to *Disabled*.

### Volume adjustment

#### Increasing the volume

- ▶ Press the key combination **Fn** + **F7**.

#### Reducing the volume

- ▶ Press the key combination **Fn** + **F8**.

You can also adjust the volume of the loudspeaker in the audio program (e.g. mixer) or in the application program using the audio functions.

### Changing display settings

You configure the basic display settings with *Main Setup* in the *BIOS Setup* (see the section "[Settings in BIOS Setup](#)").

You can change the settings using key combinations.

#### Switching between normal and reverse video

If your notebook has a DSTN color display, you can switch between normal and reverse video. You can select a normal display (dark characters on a light background) or a reverse display (light characters on a dark background).

- ▶ Press the key combination **Fn** + **F11**.

#### Switching between internal and external display

If an external monitor is connected to your notebook, you can switch between different display options. You can opt to use:

- just the notebook's internal display
- just the external display
- both the internal and the external display.

The setting you select with *Display Device Selection* in *Main Setup* is always active when you switch on your notebook.

- ▶ Press the key combination **Fn** + **F12** until you find the display option you require.

### Setting the display contrast

If your notebook has a DSTN color display, you can set the display contrast.

#### Increasing the display contrast

- ▶ Press the key combination **Fn** + **←** until you find the right display contrast.

#### Reducing the display contrast

- ▶ Press the key combination **Fn** + **→** until you find the right display contrast.

### Setting the display brightness

If your notebook has a DSTN color display, you can adjust the brightness. Reducing the brightness level of the display helps to reduce the amount of power consumed by the notebook.

#### Increasing the brightness

- ▶ Press the key combination **Fn** + **↑** until you find the right brightness level.

#### Reducing the brightness

- ▶ Press the key combination **Fn** + **↓** until you find the right brightness level.

# The battery

The notebook is fitted with a battery (Lithium Ion battery or Nickel-metal hydride battery) that provides it with power during mobile use. You can increase battery life by enabling its power management features.

In addition to the standard battery, you can also use a second battery. To do so, you must change the built-in floppy disk drive against the additional battery. By using both batteries, you can double the notebook's mobile operation time.

The battery charge is indicated by the BATTERY LED and the battery symbol in the display field (see the section "[Displays](#)") When you switch on the notebook, it takes a few seconds before the battery status is displayed.

The battery will last for roughly 500 charge/discharge cycles.

To utilize the optimum charging capacity of the battery, you should regularly perform the battery learning cycle (see "[Learning cycle for batteries under Windows 95](#)").

## Charging, caring for and maintaining the battery

The battery can only be charged when the ambient temperatures is between 5°C and 40°C.

The battery charge is indicated by the BATTERY LED and the battery symbol in the display field.

When the notebook is switched off, the Nickel-metal hydride battery will charge in roughly two hours and the Lithium Ion battery in roughly four hours. If the notebook is switched on, it will charge in roughly five hours. If the notebook is fitted with two batteries, charging will take twice as long. The batteries are charged successively. The battery which was connected first is charged first.

You can charge the battery by:

- connecting the notebook to the power adapter
- connecting the notebook to the car adapter
- connecting the notebook to the MobiDock
- connecting the notebook to the QuickPort/QuickPort Plus

Before a battery is used for the first time, the battery learning cycle should be performed (see also the section "[Learning cycle for batteries under Windows 95](#)"). To utilize the optimum charging capacity of the nickel-metal hydride battery, you should regularly perform the battery learning cycle for this battery.

### Lithium Ion battery (Li-Ion)

You should continue working in battery mode until an audible warning indicates that charging is necessary. Then you can charge the battery.

If a lithium ion battery is to be stored over a long period of time, it should always be stored in a discharged state to prevent loss of capacity through self-discharge.

### Nickel-metal hydride battery (NiMH)

You should always deep discharge the Nickel-metal hydride battery once a month. In addition you should deep discharge the battery:

- after charging the battery for the first time (e.g., when you use the notebook for the first time)
- if you have not used the notebook for a lengthy period (approx. one week)
- if the battery's service life becomes shorter
- if the battery gets hot while charging
- the charge segments in the battery symbol start to flash

### Connecting the power adapter

The supplied power cord conforms to the requirements of the country in which you purchased your notebook. Make sure that the power cable is approved for use in the country in which you intend to use it.

The notebook and the power adapter should be at least 200 mm apart.

Keep other objects 100 mm clear of the notebook and its power adapter.

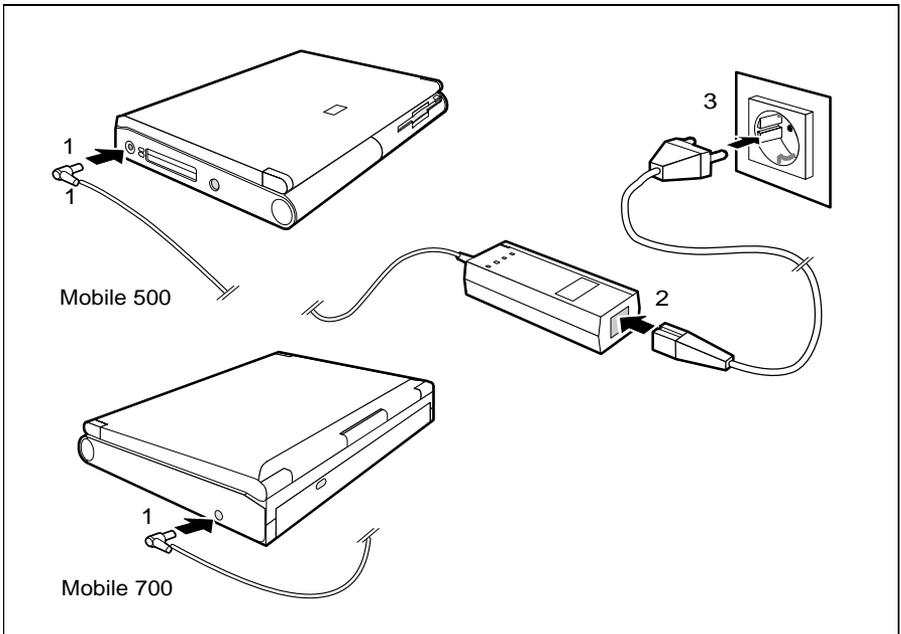

Do not cover the ventilation slots in the notebook and the power adapter.

Do not stand the power adapter on heat-sensitive material.

The power adapter's AC cord may only be connected to a power outlet if the notebook is connected to the power adapter.

- ▶ Switch off the notebook.
- ▶ Place the notebook on a level, stable surface.

## Preparation for use and operation

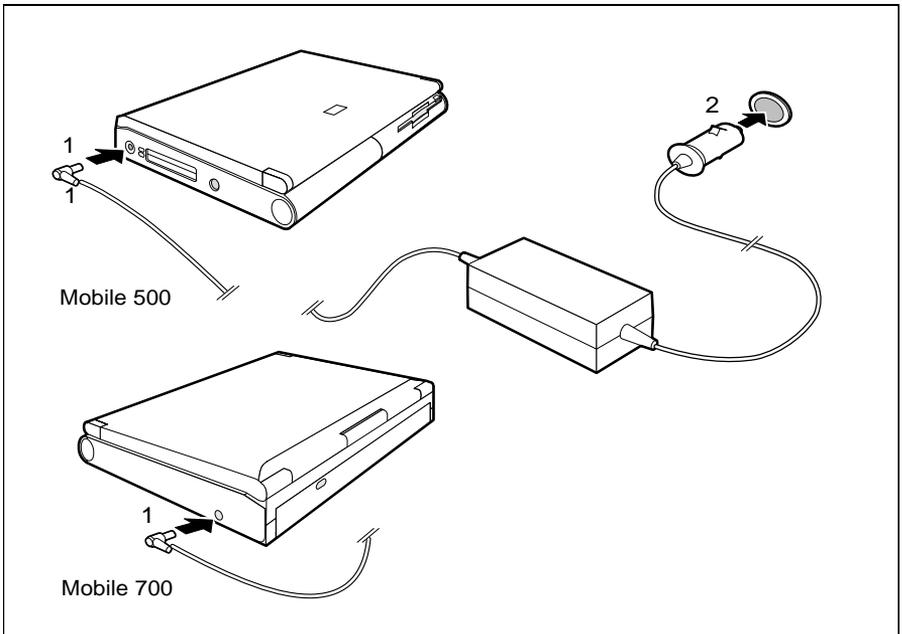

- ▶ Plug the DC output connector on the power adapter into the DC input connector (DC IN) on the notebook (1).
- ▶ Connect the AC power cable to the power adapter (2).
- ▶ Plug the power cable into the power outlet (3).  
The power adapter display lights up. After a few seconds the notebook's BATTERY LED (a) lights up. The battery charges.

### Connecting the car adapter

You can use the car adapter to charge your notebook's battery if the car has a 12V electrical system.

- ▶ Switch off the notebook.
- ▶ Place the notebook on a level, stable surface.

- ▶ Plug the DC output connector on the car adapter into the DC input connector (DC IN) on the notebook (1).
- ▶ Start the car's engine.

You should only use the car adapter while the car's engine is running. You must not start the car's engine while the car adapter is connected to the car's electrical system.

Do not stand the car adapter on heat-sensitive material. When in operation, the car adapter must be free-standing and may not be covered.

Keep other objects 100 mm clear of the notebook. Do not cover the ventilation slots in the notebook.

- ▶ Plug the car adapter's input connector into the car's cigarette lighter (2). After a few seconds the notebook's BATTERY LED (a) lights up. The battery charges.

### Learning cycle for batteries under Windows 95

To utilize the maximum capacity of the battery, you must perform a "learning cycle", in other words the battery "learns" what its maximum capacity is.

During the learning cycle the battery is first fully charged, then completely discharged, and then recharged again.

To perform the battery learning cycle:

- ▶ Install the battery in your notebook.
- ▶ Connect the power adapter to your notebook.
- ▶ Switch the notebook on.
- ▶ Press the **F8** key while *Starting Windows 95* is displayed on the screen.

The Windows 95 Start menu is then displayed.

- ▶ Select *Safe mode command prompt only*.
- ▶ Insert the "Battery Tools" diskette in the drive.
- ▶ Start the *a:\alermeng.exe* program.

The battery learning cycle takes between four and seven hours. When the message *Main Battery succeeded* or *Aux Battery succeeded* appears on the screen the battery has a charging capacity of 5 - 10%.

- ▶ After this message has been displayed abort the program using the **Ctrl** + **C** keys.
- ▶ Switch your notebook off.

The battery will now be fully charged.

## Inserting and removing batteries

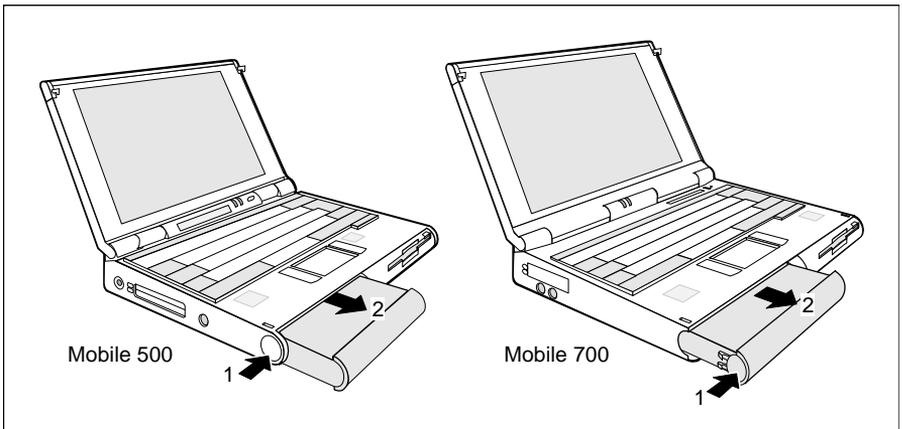

Only use batteries designed for the this notebook.

Never use force when inserting or removing a battery.

Make sure no foreign objects fall into the battery compartment.

### Removing the battery from the left compartment

- ▶ Switch off the notebook. You can leave the notebook on provided the battery in the left slot is not the notebook's only power source.
- ▶ Swing open the display.
- ▶ Place the notebook on a level, stable surface.

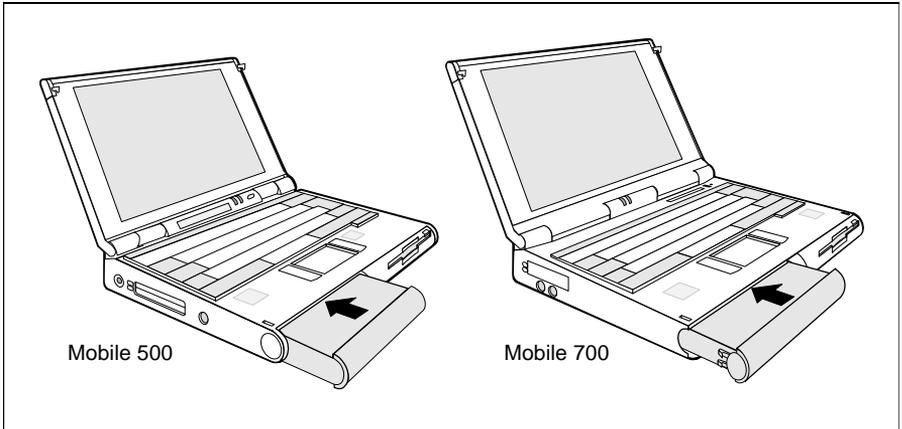

- ▶ Press the left battery's unlock button (1).
- ▶ Pull the battery out of the left slot (2).

### Inserting the battery in the left compartment

- ▶ Swing open the display.
- ▶ Place the notebook on a level, stable surface.

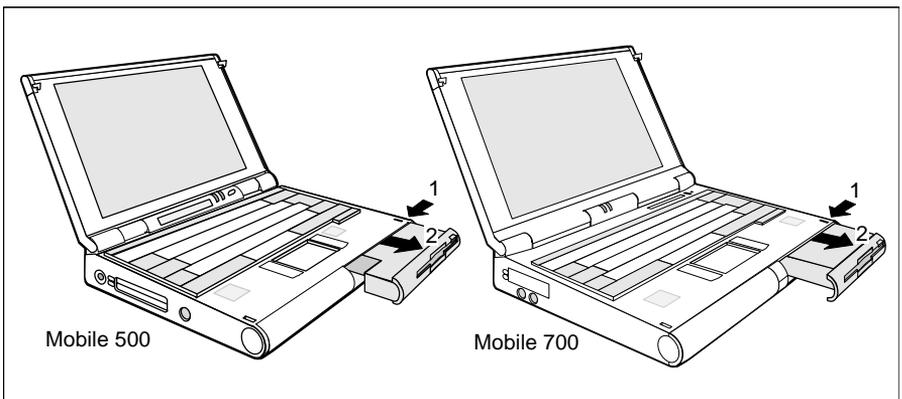

## Preparation for use and operation

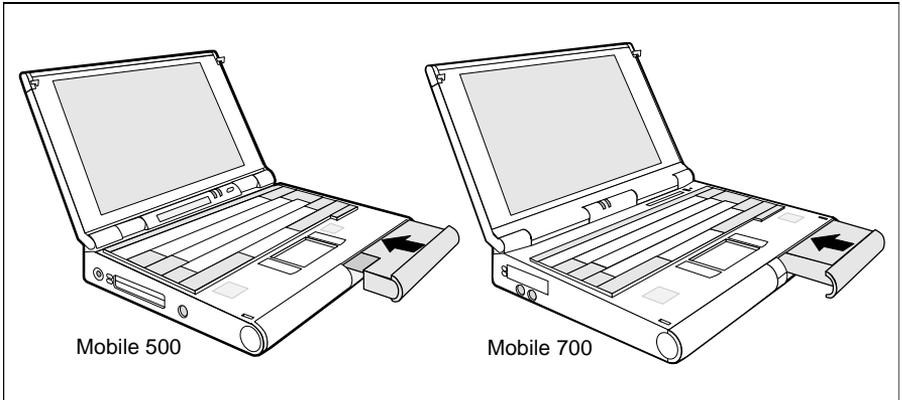

- ▶ Place the battery in the lefthand slot so that the contacts enter first. The top and bottom of the battery are marked with an arrow. Place the battery in the lefthand slot in such a way that the arrow on the top of the battery points inwards.
- ▶ Push the battery into the slot until you feel it locking into place.

### Inserting the battery in the right-hand compartment

- ▶ Swing open the display.
- ▶ Place the notebook on a level, stable surface.

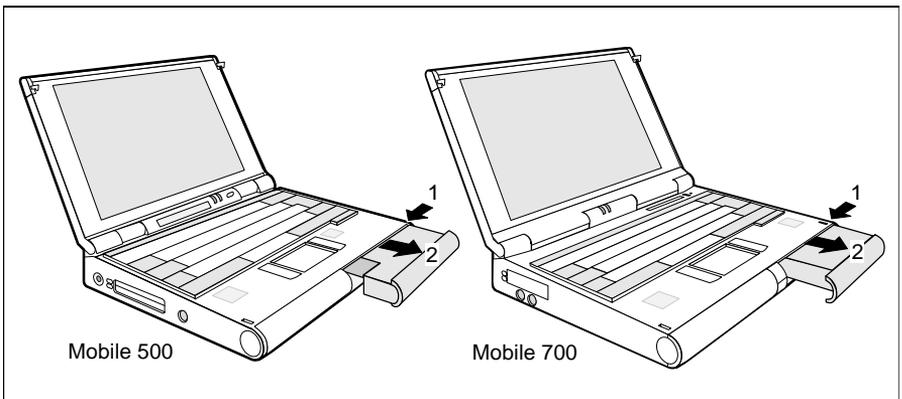

- ▶ Press the disk drive's unlock button in the right-hand slot (1).
- ▶ Pull the disk drive out of the slot (2).

- ▶ Place the battery in the right-hand slot so that the contacts enter first. The top and bottom of the battery are marked with an arrow. Place the battery in the right-hand slot in such a way that the arrow on the top of the battery points inwards.
- ▶ Push the battery into the slot until you feel it locking into place.

### Removing the battery from the right-hand compartment

- ▶ Switch off the notebook. You can leave the notebook on provided the battery in the right-hand slot is not the notebook's only power source.
- ▶ Swing open the display.
- ▶ Place the notebook on a level, stable surface.

- ▶ Press the right-hand battery's unlock button (1).
- ▶ Pull the supplementary battery out of the right-hand slot (2).

# Settings in BIOS Setup

In *BIOS Setup* you can set the system functions and the hardware configuration of the notebook.

When it is supplied, the notebook is set to factory default settings. You can alter these settings in the various menus of the *BIOS Setup*. Any changes you make take effect as soon as you save and quit the *BIOS Setup*.

The *BIOS Setup* program contains the following menus:

- *Main Setup:* for system settings as time, date, ports and pointing device
- *Advanced Setup:* for setting up the advanced features
- *Security Setup:* for setting up the security features
- *Power Setup:* for setting up the power-management features
- *Docking Setup* for configuring the MobiDock (this option is only available if the notebook is connected to a MobiDock).
- *Boot Setup:* for configuring the boot sequence
- *Exit:* for exiting BIOS Setup

## Starting BIOS Setup

- ▶ Restart the notebook (switching on/off or warm boot).
- ▶ When the message `Press F2 for Setup` appears, press the key **F2**.

If a supervisor or user password has been defined:

- ▶ Enter the supervisor or user password and press the Enter key.
- ▶ If you have forgotten the user password contact your system administrator or contact our customer service. If you have forgotten the supervisor password contact our customer service.

If you have accessed the Setup using the user password, you cannot change the settings in the BIOS Setup menus "Advanced", "Security", "Docking" and "Boot".

The *Main* menu is displayed on the screen.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd.						
<b>Main</b>	Advanced	Security	Power	Docking	Boot	Exit
System Time: [07:42:19] System Date: [08/11/1995]  Diskette A: [1.44M, 3½"]  ▶ IDE Adapter 0 Master (C: 810 MB) ▶ IDE Adapter 0 Slave (CD-ROM) Display Device Selection: [LCD & CRT] PS/2 Mouse: [Enabled] Video System: [EGA / VGA] ▶ Boot Options  Video Display: [EGA/VGA]  System Memory: 640 KB Extended Memory: 15 MB					Item Specific Help <hr/>	
F1 Help    ↕ Select Item    Space Change Values    F9 Setup Defaults ESC Exit   ←→ Select Menu   Enter Select ▶ Sub-Menu   F10 Previous Values						

Example for *Main* menu

## Operating BIOS Setup

- ▶ Use the cursor key  or  to select the menu you wish to access to make changes.
- ▶ Press the Enter key. The menu is displayed on the screen.
- ▶ Use the cursor key  or  to select the field you wish to change.
- ▶ Press the space bar to change the entries.  
The fields *Supervisor Password*, *User Password* and *Docking Station Password* require that you enter normal text.
- ▶ Repeat the last two steps described for all the fields you wish to change.
- ▶ Make a note of the changes you have made (here in this manual, for example).
- ▶ Use the  key to load the default values of the selected setup menu.
- ▶ With the  key all the values of the menu you are currently in are restored.

## Main menu - Making system settings

In the *Main* menu you can set up the following:

- time (in the field marked *Time*)
- date (in the field marked *Date*)
- hard disk settings (in the two fields marked *IDE Adapter*)
- display device (in the field marked *Display Device Selection*)
- pointing devices (in the field marked *Internal Mouse*)
- display settings (in the fields marked *Video System/Video Display*)
- System startup options (in the field marked *Boot Options*)

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd.						
<b>Main</b>	Advanced	Security	Power	Docking	Boot	Exit
System Time: [07:42:19] System Date: [08/11/1995]  Diskette A: [1.44M, 3½"]  ▶ IDE Adapter 0 Master (C: 810 MB) ▶ IDE Adapter 0 Slave (CD-ROM) Display Device Selection: [LCD & CRT] PS/2 Mouse: [Enabled] Video System: [EGA / VGA] ▶ Boot Options  Video Display: [EGA/VGA]  System Memory: 640 KB Extended Memory: 7 MB	Item Specific Help <hr/>					
F1 Help    ↑↓ Select Item    Space Change Values    F9 Setup Defaults ESC Exit   ←→ Select Menu    Enter Select ▶ Sub-Menu    F10 Previous Values						

Example for *Main* menu

## System Time/System Date

*System Time* indicate the time of the device. If you change the time setting, enter the time in the format *HH:MM:SS* (hours:minutes:seconds)

*System Date* indicate the date of the device. If you change the date setting, enter the date in the format *MM.DD.YYYY* (month/day/ year)

## Diskette A: - Floppy disk drive

This field shows the type of the built-in floppy disk drive.

360KB - 5 1/4“, 720KB - 3 1/2“, 1.2MB - 5 1/4“, **1.44MB - 3 1/2“**, 2.88MB - 3 1/2“  
The entry depends on the floppy disk drive installed.

*Not Installed* A floppy disk drive is not installed.

## IDE Adapter 0 Master/IDE Adapter 0 Slave - hard disk drive

These two fields call the submenu to make corresponding settings of the IDE hard disk drives.

You should change the default settings only if you are connecting an additional IDE drive (e.g. CD ROM drive)

The following description of the setting options for *IDE Adapter 0 Master* also applies to *IDE Adapter 0 Slave*, *IDE Adapter 1 Master* and *IDE Adapter 1 Slave*. The default settings depend on the installed drive.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd.			
<b>Main</b>			
IDE Adapter 0 Master (C: 814 MB)		Item Specific Help	
Autotype Fixed Disk:	[Press Enter]		
Type:	[Auto] 814 Mb		
Cylinders:	1579		
Heads:	16		
Sectors/Track:	63		
Write Precomp:	None		
Multi-Sector Transfers:	16 Sectors		
LBA Mode Control:	Enabled		
32 Bit I/O:	[Enabled]		
Transfer Mode:	Fast PIO 3		
F1 Help	↑↓ Select Item	Space Change Values	F9 Setup Defaults
ESC Exit	←→ Select Menu	Enter Select ▶ Sub-Menu	F10 Previous Values

Example for the submenu *IDE Adapter 0 Master*

If you have installed a new unformatted IDE hard disk drive, you should mark the *Autotype Fixed Disk* field and press the Enter key. This has the effect of setting the optimum values for the IDE hard disk drive. You can change these values if you set the *Type* field to *User*.

If you install a formatted hard disk drive, the values are set automatically.

### **Type - Hard Disk Type**

This field is used to specify the type of hard disk drive.

- |             |   |
|-------------|---|
| <i>Auto</i> | If the hard disk supports this mode, the setup menu reads the hard disk parameters from the disk itself. You do not need to select the parameters yourself.                 |
| <i>User</i> | You can enter the hard disk parameters yourself.<br>If you have set the hard disk parameters with <i>Autotype Fixed Disk</i> , you can only reduce the values.              |
| <i>None</i> | You cannot change the hard disk parameters ( <i>Cylinders, Heads, Sector/Track</i> and <i>Write Precomp</i> ). An IDE drive has not been installed.                         |
| <i>CD</i>   | If, for example, a CD-ROM drive is inserted into the notebook or a CD-ROM drive is built into the MobiDock, this item enables you to boot the system from the CD-ROM drive. |

### **Cylinders, Heads, Sectors/Track, Write Precomp - hard disk parameter**

These hard disk parameters are set in accordance with the IDE hard disk drive. If you want to change the hard disk parameters manually, set the *Type* field to *User*.

### Multi-Sector Transfers - Block Transfer

This field specifies the transfer mode for the IDE hard disk drive.

**Disabled** One block is transferred for each interrupt.

*2 Sectors, 4 Sectors, 6 Sectors, 8 Sectors, 16 Sectors*

The set number of blocks (sectors) is transferred for each interrupt. This enhances the performance.

### LBA Translation - Addressing

This field enables and disables the LBA (Logical Block Addressing) mode. If a hard disk supports LBA mode, the LBA mode allows you to set up and use hard disks with a capacity of more than 528 Mbytes.

The default settings depend on the installed IDE hard disk drive. Change the default entries only if you are installing another hard disk drive.

You may only use IDE drives in the LBA mode selected when they were set up. In other words, if you set up a hard disk with LBA mode disabled, you may only operate the hard disk with LBA mode disabled.

**Disabled** The BIOS uses the hard disk parameters and supports a maximum capacity of 528 Mbytes.

**Enabled** If the hard disk supports LBA and it has a capacity of more than 528 Mbytes, the BIOS translates the hard disk parameters. This allows the disk's full capacity to be used.

### 32 Bit I/O - Access width for data transfer

This field specifies the width of data transmission between the processor and the IDE controller.

**Enabled** Data transfer is performed with 32-bit I/O commands. This enhances performance.

**Disabled** Data transfer is performed with 16-bit I/O commands.

**Transfer Mode**

This field specifies the transfer mode for the IDE hard disk drive.

- Standard*            0,8 Mbyte/s to 2 Mbyte/s
- Fast PIO 1*            2 Mbyte/s to 4 Mbyte/s
- Fast PIO 2*            4 Mbytes/s to 5 Mbytes/s
- Fast PIO 3*            5 Mbytes/s to 10 Mbytes/s
- Fast PIO 4*            10 Mbytes/s to 13,3 Mbytes/s

**Display Device Selection**

This field is used to specify the display device.

- LCD&CRT*    The notebook's internal display and the external display are used.
- CRT*            Just the external display is used.
- LCD*            Just the external display is used.

If the notebook is connected to a MobiDock and an external display is connected to the MobiDock, the external display is used regardless of the setting in the BIOS setup (CRT only).

**PS/2 Mouse**

This field determines whether the PS/2 mouse or the touchpad is enabled on the notebook.

- Enabled*        The internal touchpad and a PS/2 mouse are enabled.
- Disabled*        The internal touchpad and the PS/2-Maus are disabled.  
You must set *Disabled* if you want to use an external serial mouse.
- External Only* The PS/2 mouse is enabled. The internal touchpad is enabled.

## Video System - External monitor type

This field is used to specify the connected external monitor type.

*EGA/VGA, CGA 80x25, Monochrome*

Default entry: *EGA/VGA*

## Boot Options - System startup options

This field calls the submenu to select the settings for the system startup of the device.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. <b>Main</b>	
Boot Options	Item Specific Help
Summary screen: [Enabled] Floppy check: [Enabled]	
F1 Help    ↑ Select Item    Space Change Values    F9 Setup Defaults ESC Exit   ←→ Select Menu    Enter Select ► Sub-Menu    F10 Previous Values	

Example for the submenu *Boot Options*

### Summary screen - Displaying the configuration at system startup

This field is used to specify whether the configuration is displayed at system startup.

**Enabled**      The configuration is displayed when the device is switched on.

**Disabled**     The configuration is not displayed when the device is switched on.

**Floppy check - Checking the disk drive**

This field can make the system startup faster.

*Enabled*      The entire configuration is checked when the notebook is switched on.

*Disabled*     The disk drive is not checked in the self-test when the notebook is switched on.

**System Memory - Main memory**

This field indicates the size of the available base memory below 1 Mbyte.

**Extended Memory**

This field indicates the size of the memory above 1 Mbyte.

## Advanced menu - Making advanced system settings

Change the default settings only for special applications. Incorrect settings can cause malfunctions.

In the *Advanced* menu you can make the following settings:

- Ports and controllers (in the *Integrated Peripherals* submenu)
- PCI configuration (in the *PCI Devices* submenu)
- Second-level cache (in the *Memory Cache* submenu)
- Plug&Play functionality (in the *Plug and Play O/S* field)
- Configuration data (in the *Reset Configuration Data* field)
- Hard disk access (in the *Large Disk Access Mode* field)

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. Main <b>Advanced</b> Security    Power    Docking    Boot    Exit	
<p style="text-align: center;">Warning!</p> Setting items on this menu to incorrect values may cause your system to malfunction. <ul style="list-style-type: none"> <li>▶ Integrated Peripherals</li> <li>▶ PCI Devices</li> <li>▶ Memory Cache</li> </ul> <p>Plug &amp; Play O/S:                    [Yes]</p> <p>Reset Configuration Data:        [No]</p> <p>Large Disk Access Mode:            [DOS]</p>	<p style="text-align: center;">Item Specific Help</p> <hr style="width: 80%; margin: auto;"/>
F1 Help    ↓ Select Item    Space Change Values    F9 Setup Defaults ESC Exit   ←→ Select Menu    Enter Select ▶ Sub-Menu    F10 Previous Values	

Example of the *Advanced* menu

## Integrated Peripherals - Ports and controllers

This field calls the submenu to make the settings for the ports and controllers.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. <b>Advanced</b>	
Integrated Peripherals	Item Specific Help
COM port: [3F8, (COM1), IRQ4] IrDA port: [2F8, (COM2), IRQ3] Parallel port [378, IRQ7] Parallel Port Mode: [Bi-Directional] ECP Channel: Disabled On-board IDE adapter: [Primary] Diskette Controller: [Enabled] On Board Audio: [Enabled] I/O Channel: [220h] Capture IRQ channel: [IRQ5] Playback IRQ channel: [IRQ11] Capture DMA Channel: [DMA CH1] Playback DMA Channel: [DMA CH5] MPU I/O: [300h] Joystick: [Enabled] QuickPort Plus Audio Speaker: [Notebook] Microphone: [Notebook]	
F1 Help    ↑↓ Select Item    Space Change Values    F9 Setup Defaults ESC Exit   ←→ Select Menu    Enter Select    ► Sub-Menu    F10 Previous Values	

Example for the submenu *Integrated Peripherals*

### COM port - Serial port

This field selects the address and the interrupt used to access the relevant serial interface.

**3F8h (COM1) IRQ4, 2F8h (COM2) IRQ3, 3E8h (COM3) IRQ4, 2E8h (COM4) IRQ3**  
 The serial port is set to the shown address and interrupt.

*Auto*                      The serial port is automatically set to the next available combination (address, interrupt).

*Disabled*                The serial interface is disabled.

**IrDA port - infrared interface (- serial port)**

This field defines which serial port is used as a infrared interface.

If you wish to use infrared data transfer, an infrared interface with the associated hardware must be incorporated in the device.

**2F8h (COM2) IRQ3, 3F8h (COM1) IRQ4, 3E8h (COM3) IRQ4, 2E8h (COM4) IRQ3**  
The infrared interface is set to the shown address and interrupt.

*Auto* The infrared interface is automatically set to the next available combination (address, interrupt).

*Disabled* The infrared interface is disabled.

**Parallel port**

This field selects the address and the interrupt used to access the relevant parallel port.

**378h, IRQ7, 278h, IRQ5, 3BCh, IRQ7, 378h, IRQ5**  
The parallel port is set to the shown address and interrupt.

*Auto* The parallel port is automatically set to the next available combination (address, interrupt).

*Disabled* The parallel port is disabled.

**Parallel Port Mode - Parallel data transfer**

This field defines whether the parallel port is to be used as a bi-directional input/output port or just as an output port. *ECP* and *EPP* transfer modes allow faster transfer rates of 2 and 2.4 Mbytes/s. These modes will only work with peripheral devices which support them. In addition, the field *Parallel* must be set to *378h* or *278h*.

***Bi-Directional***

Data can be transferred in both directions across the port.

*EPP* Fast transfer mode (up to 2 Mbytes/s), can output and receive data. The mode requires a peripheral device which supports the EPP (Enhanced Parallel Port) transfer mode.

*ECP* Fast transfer mode (up to 2,4 Mbytes/s), can output and receive data. The mode requires a peripheral device which supports the ECP (Enhanced Capability Port) transfer mode.

*Output Only*

The port functions as an output port only.

**ECP channel - DMA channel for ECP mode**

You can select different DMA channels for ECP mode:

*DMA CH3/DMA CH1*

The channel displayed is selected for ECP mode.

*Disabled*

No channel is selected for ECP mode.

**On-board IDE Adapter - IDE hard disk drive controller**

This field is used to enable and disable the built-in IDE hard disk drive controller of the notebook.

*Primary*

The primary IDE hard disk drive controller is enabled. IRQ14 is occupied.

*Secondary*

The secondary IDE hard disk drive controller is enabled. IRQ15 is occupied.

*Disabled*

The IDE hard disk drive controller of the notebook is disabled.

**Diskette Controller - Floppy disk drive controller**

This field is used to enable and disable the built-in floppy disk drive controller on the system board.

*Enabled*

The floppy disk controller is enabled - IRQ 6 is used.

*Disabled*

The floppy disk controller is disabled - IRQ 6 is free.

### On Board Audio - Audio controller

This field is used to enable and disable the built-in audio controller on the system board.

**Enabled**      The chip is enabled

**Disabled**     The chip is disabled

The following fields are only visible if the *On Board Audio* field is set to *Enabled*.

#### I/O Channel - I/O address

The I/O channel can be set to various basic addresses.

*220h, 230h, 240h, 250h*

The I/O channel is set to the address displayed.

#### Capture IRQ Channel - Capture interrupt

This field is used to specify the interrupt for the capture. The wave interrupt can be set to various IRQs.

*IRQ5, IRQ7, IRQ9, IRQ10*

The wave interrupt is set to the interrupt displayed.

#### Playback IRQ Channel - Playback interrupt

This field is used to specify the interrupt for the playback. The playback interrupt can be set to various IRQs.

*IRQ11, IRQ15*

The playback wave is set to the interrupt displayed.

#### Capture DMA Channel - DMA channel for playback

The DMA channel for playback can be set to various values.

*DMA CH1, DMA CH0, DMA CH3*

The DMA channel is set to the value displayed.

**Playback DMA Channel - DMA channel for capture**

The DMA channel for capture can be set to various values.

*DMA CH5, DMA CH6*

DMA channel 2 is set to the value displayed.

**MPU I/O - I/O Address of the MIDI Port**

The I/O address of the MIDI port can be set to different values.

*300h, 310h, 320h 330h*

The I/O address is set to the value displayed.

**Joystick - Joystick Port**

The joystick port can be enabled and disabled.

*Enabled*      The joystick is enabled.

*Disabled*     The joystick is disabled.

**QuickPort Plus Audio - Audio options for QuickPort Plus**

The fields set the audio options for the QuickPort Plus.

QuickPortPlus Audio and the accompanying fields are only visible if the notebook is connected to a QuickPort Plus.

**Speaker - Selecting the loudspeaker**

*Notebook* The internal loudspeaker on the notebook is switched on.

*QuickPort Plus*

Only the external loudspeakers connected to the QuickPort Plus are switched on.

**Microphone - Selecting the microphone**

*Notebook* The internal microphone on the notebook is switched on.

*QuickPort Plus*

Only the external microphone connected to the QuickPort Plus is switched on.

## PCI Devices - PCI configuration

This field calls the submenu to select the settings for the PC card controller and the PCI slots.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. <b>Advanced</b>	
PCI Devices	Item Specific Help
PCMCIA Controller Select:[Always Enable Onboard] PCMCIA Controller Mode: [Standard] PCMCIA I/O Address: [PCI]  PCI IRQ line 1: [Auto Select] PCI IRQ line 2: [Auto Select]	
F1 Help    ↑↓ Select Item    Space Change Values    F9 Setup Defaults ESC Exit   ←→ Select Menu    Enter Select ▶ Sub-Menu    F10 Previous Values	

Example for submenu *PCI Devices*

If you use an operating system that does not support plug & play, you must select *No* for the *Plug&Play O/S* field in the *Advanced* menu to ensure that the PC card controller is switched on by the system BIOS.

### PCMCIA Controller Select - Selecting the PC card controller

This field is only active if you use an operating system that does not support plug & play and have selected *No* for the *Plug&Play O/S* field in the *Advanced* menu. If you use an operating system that supports plug & play, both PC card controllers are always active.

If you use PC card drivers which support operation of only one PC card controller, you can choose whether the PC card controller is to be used in the notebook or in the QuickPort Plus.

***Always Enable Onboard***

The PC card controller in the notebook is always enabled. If the notebook is connected to a QuickPort Plus, the PC card controller in the QuickPort Plus is also enabled.

***Auto Select QuickPort+***

If the notebook is connected to a QuickPort Plus, the PC card controller in the notebook is disabled. In this case, only the PC card controller in the QuickPort Plus is enabled.

**PCMCIA Controller Mode - Settings of the PC Card Controller**

With this field you can specify the mode in which the PC Card Controller is to be operated.

***Standard*** No PCI interrupt is assigned to the PC Card Controller.

***Native IRQ*** A PCI interrupt is assigned to the PC Card Controller.

With some operating systems (for example Windows NT) the PC Card Controller must be assigned a PCI interrupt.

Change this setting only if you encounter problems using the *Standard* setting.

**PCMCIA I/O Address -****Selecting the I/O address for the PC card controller**

This field is used to specify whether the PC card controller in the Notebook or in the QuickPort Plus is to be configured to the compatible base I/O address 3E0h. This may be required if you use PC card drivers other than Card & Socket Services (e.g. direct enabler).

***PCI*** The base I/O address for the PC card controller in the notebook and in the QuickPort Plus is assigned by the system BIOS.

***Legacy/Notebook***

The PC card controller in the notebook is configured to the compatible base I/O address 3E0h.

***Legacy/QuickPort+***

The PC card controller in the QuickPort Plus is configured to the compatible base I/O address 3E0h.

### PCI IRQ line 1,2 - Setting the PCI interrupt

This field is used to specify which PCI interrupt is to be switched to which ISA interrupt.

A multifunctional PCI board can use all PCI interrupts, if need be.

If you use a setting other than *Auto Select*, the Plug&Play functionality of the system BIOS for PCI boards is deactivated.

For monofunctional PCI boards, the PCI interrupt line 1 is assigned to the PCI slot1 and the PCI interrupt line 2 to the PCI slot 2.

***Auto Select*** The PCI interrupt is automatically assigned in accordance with the plug & play guidelines.

*3, 4, 5, 7, 10, 11*

The PCI interrupt is switched to the selected ISA interrupt. You may not select an ISA interrupt that is used by a component on the system board (e.g. controller) or an ISA board.

***Disabled*** No PCI interrupt is used for the PCI board in the assigned PCI slot. You should only select this setting if you are sure that the corresponding PCI board does not require an interrupt. Otherwise, errors may occur.

PCI IRQ line 1 is used by the following PCI boards: PC card controller in the notebook and in the QuickPort Plus, SCSI controller in the MobiDock. PCI IRQ line 1 or line 2 is used by one of the PCI boards in the MobiDock. This depends on the PCI board.

## Memory Cache - Cache

This field calls the submenu to select the settings for the internal cache (in the processor) and the second-level cache (on the system board).

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. <b>Advanced</b>	
Memory Cache	Item Specific Help
External Cache: [Enabled]	
Cache System BIOS Area: [Enabled] Cache Video BIOS Area: [Enabled]	
Cache Memory Regions	
C800 - CBFF: [Disabled]	
CC00 - CFFF: [Disabled]	
D000 - D3FF: [Disabled]	
D400 - D7FF: [Disabled]	
DC00 - DFFF: [Disabled]	
F1 Help    ↵ Select Item    Space Change Values    F9 Setup Defaults ESC Exit   ←→ Select Menu   Enter Select ► Sub-Menu   F10 Previous Values	

Example of the submenu *Cache - Memory Cache*

### External Cache - Cache utilization

This field is used to enable and disable the external cache. The cache is a buffer to which parts of the main memory and BIOS can be temporarily copied. The notebooks performance is higher when the cache is enabled. You must disable the cache:

- if the access time is too short for older applications
- if you are installing *OS/2 Warp*.

**Enabled**      Internal (first-level cache) and external cache (second-level cache) are enabled. If there is no external Cache, only the internal cache is used.

**Disabled**      Only the internal cache is used.

### Cache System BIOS Area/ Cache Video BIOS Area

Condition: The *Cache* field must be set to *Enabled*.

*Cache System BIOS Area* and *Cache Video BIOS Area* lets you specify the BIOS that should be mapped to the cache. Mapping the BIOS to the cache increases system performance.

- Enabled**      The specified BIOS is mapped to the cache.
- Disabled**     The specified BIOS is not mapped to the cache.

### Cache Memory Regions

Condition: The *Cache* field must be set to *Enabled*.

*Cache Memory Regions* lets you specify the BIOS ROM areas that should be mapped to the cache. Mapping the BIOS ROM areas to the cache increases system performance. This is worthwhile only in conjunction with a MobiDock and built-in cards with their own ROM.

- Disabled**      The specified BIOS ROM is not mapped to the cache.
- Enabled**        The specified BIOS ROM is mapped to the cache.

### Plug & Play O/S - Plug&Play functionality

This field is used to define the Plug&Play functionality. Plug&Play means that inserted boards are automatically recognized and installed if they support Plug&Play.

- Yes**            The operating system takes over some of the Plug&Play functions. You should select this setting only if the operating system (e.g. Windows 95) supports Plug&Play.
- No**             The System BIOS takes over the complete Plug&Play functionality.

## Reset Configuration Data

This field is used to specify whether the configuration data is reset and reinitialized when the notebook is started.

- No*            The built-in boards and drives are initialized with the existing configuration data. There is no update when the device is started.
- Yes*            When the notebook is started the old configuration data is reset. The new configuration data is determined by means of the Plug&Play functionality. The mounted boards and drives are then initialized with this data.

This field only takes effect if the notebook is connected to a MobiDock.

## Large Disk Access Mode - Hard disk access

This field is used to specify the type of hard disk access for large hard disks (more than 1024 cylinders, 16 heads). The default setting depends on the operating system used.

- DOS*            The operating system uses MS-DOS-compatible hard disk accesses.
- Other*          The operating system uses hard disk accesses which are not MS-DOS-compatible (e.g. Novell, SCO Unix).

## Security menu - Setting up the security features

You can set up the following security features in the *Security* menu

- Setting a supervisor password (in the field *Set Supervisor password*)
- Setting a user password (in the field *Set User password*)
- Activating the password query for system startup (in the field *Password on boot*)
- Blocking access to the diskette (in the field *Diskette access*)

Example of the *Security* menu

## Supervisor is/User Password is - Password display

*Disabled, Enabled*

These fields indicate whether the appropriate password is installed or not.

## Set Supervisor Password

This field enables you to install the supervisor password.

## Set User Password

This field enables you to install the user password. However, you can only assign the user password if a supervisor password has already been assigned.

## Password on boot - Password query during system startup

Requirement: the supervisor password or user password must be installed.

This field is used to specify whether the password is to be queried before the operating system is booted.

*Disabled*      The password is queried only when BIOS Setup is called.

*Enabled*        The password is queried before the operating system is booted and when BIOS Setup is called.

## Diskette access - Access privilege for disk drive

This field is used to specify whether diskettes can be accessed.

*User*            Both users and the supervisor can access diskettes.

*Supervisor*    Only the supervisor can access diskettes.

## Power menu - Setting energy saving functions

You can set up the following energy saving functions in the *Power* menu

- Enabling of APM interface (in the *APM* field)
- Defining the effectiveness of energy saving functions (in the *PM Control* field)
- Defining the extent of energy saving functions (in the *Power Savings* field)
- Standby timer (in the *Standby Timeout* field)
- Suspend timer (in the *Suspend Timeout* field)
- Automatic display power-down (in the *Video Timeout* field)
- Doze mode (in the *Hardware Dozemode* field)
- Suspend at low battery capacity (in the *Battery Low Suspend* field)
- Suspend mode selection (in the *Suspend Mode* field)
- Resume condition selection  
(in the *Resume On Modem Ring*, *Resume On Time*, *Resume Time* fields)

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd.

Example of the *Power* menu

## APM - Enabling the APM Interface

This field is used to determine whether an operation system can change the power management settings in the system BIOS.

**Disabled** Changes cannot be made to power management setting by an operating system.

**Enabled** The operating system has access to the power management settings and can change these if necessary.

## PM Control - Effectiveness of the energy saving functions

This field is used to define when the energy saving functions are effective.

### **Battery Powered Only**

The energy saving functions are only effective, when the notebook is battery powered.

### **Always Enable**

The energy saving functions are always effective.

**Disabled** The energy saving functions are disabled.

## Power Savings - Extent of energy saving functions

This field is used to define the extent of the following energy saving functions.

**Customize** The functions set in the fields *Standby Timeout*, *Suspend Timeout*, *Hard Disk Timeout*, *Video Timeout*, *Hardware Dozemode* and *Battery Low Suspend* are effective in power management

### **Maximum Performance/Maximum Battery Life**

These entries call predefined settings, thus determining the extent of energy saving.

**Disabled** None of the energy saving functions is effective.

## Standby Timeout - Standby mode

This field can only be changed, if the *Power Saving* field is set to *Customize*.

1, 2, 4, 6, 8, 12, 16, 32 min

The system switches to standby mode after the specified time without system activity.

*Off*

The notebook does not switch to standby mode.

## Suspend Timeout - Suspend mode

This field can only be changed, if the *Power Saving* field is set to *Customize*.

1, 2, 4, 6, 8, 12, 16, 32 min

The system switches to suspend mode after the specified time without system activity.

*Off*

The notebook does not switch to suspend mode.

## Hard Disk Timeout - Hard disk energy saving functions

This field can only be changed, if the *Power Saving* field is set to *Customize*.

1, 2, 4, 6, 8, 10, 15, 20 min

The hard disk drive motor is switched off after the specified time without system activity.

*Off*

The notebook does not switch off the hard disk drive motor.

## Video Timeout - Display energy saving functions

This field can only be changed, if the *Power Saving* field is set to *Customize*.

1, 2, 4, 6, 8, 10, 15, 20 min

The screen goes dark after the specified time without system activity.

*Off*

The screen does not go dark.

## Hardware Dozemode

This field can only be changed, if the *Power Saving* field is set to *Customize*.

This field is used to specify whether the notebook reduces its processor speed if it is inactive for a longer period to save energy.

**Disable**      The doze mode is disabled.

**Enable**      The notebook reduces its processor speed if it is inactive for a longer period to save energy. The processor speed is increased as soon as the system is used again.

## Battery Low Suspend - Suspend mode for low battery capacity

This field can only be changed, if the *Power Saving* field is set to *Customize*.

This field indicates whether a switch is to be made to suspend mode when the battery capacity is low.

**Enabled**      The function is enabled; the device is switched to suspend mode when the battery capacity is low.

**Disable**      The function is disabled.

## Suspend Mode

This field specifies where the system state is saved when the device is switched to suspend mode.

**Save to DRAM**      The system state is buffered in the DRAM memory.

**Save to Disk**      The system state is saved to the hard disk, and the system is switched off.

## Resume On Modem Ring - Switching on for modem ring

This field specifies whether the notebook is booted when a call is made to the connected modem.

This field can be operated only if Suspend Mode is set to *Save to DRAM*.

**OFF**            The function is disabled.

**ON**             The function is enabled.

## Resume On Time - Switching on at a fixed time

This field specifies whether the notebook is booted at a specific time. The time is set in the *Resume Time* field.

This field can be operated only if Suspend Mode is set to *Save to DRAM*.

**OFF**            The function is disabled.

**ON**             The function is enabled.

## Resume Time - Setting the switch-on time

This field specifies whether the notebook is booted at a specific time.

This field can be operated only if *Suspend Mode* is set to *Save to DRAM* and *Resume On Time* is set to *ON*.

## Docking menu - Configuring the MobiDock

The *Docking* menu is only available if the notebook is connected to a MobiDock.

You can set up the following security features in the *Docking* menu

- external floppy disk drive (in the *Diskette B:* field)
- external hard disk drive (in the fields marked *IDE Adapter 1*)
- loading the system from hard disk C: (in the *Boot Hard Disk* field)
- MobiDock password (in the *Docking Station Password is* field)

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd.					
Main	Advanced	Security	Power	<b>Docking</b>	Boot Exit
Diskette B: [Not Installed]				Item Specific Help	
▶ IDE Adapter 1 Master (None)					
▶ IDE Adapter 1 Slave (None)					
Boot Hard Disk: [Notebook]					
Integrated IDE adapter [Secondary]					
SCSI Contoller: [Enabled]

ESC Exit	←→ Select Menu	Enter Select ▶ Sub-Menu	F10 Previous		
Values					

Example of the *Docking* menu

### Diskette B: - Setting the external floppy disk drive

This field shows the type of the floppy disk drive in the MobiDock.

*Not installed* A floppy disk drive has not been installed.

*360KB - 5 1/4", 720KB - 3 1/2", 1.2MB - 5 1/4", 1.44MB - 3 1/2", 2.88MB - 3 1/2"*

The entry depends on the floppy disk drive in the MobiDock.

## IDE Adapter 1 Master/IDE Adapter 1 Slave - Setting external hard disk drives

This field shows the type of the hard disk drive in the MobiDock. How to change the settings for the hard disk drives is described in the *IDE Adapter 0* field in the *Main menu*.

## Boot Hard Disk - Specifying hard disk for system load

This field is used to specify which hard disk is to be treated as hard disk C:. This is the hard disk from which the operating system is started.

*Notebook*      The operating system is started from the notebook's hard disk.

*MobiDock*      The operating system is started from the 1st MobiDock hard disk.

## Integrated IDE Adapter -Setting IDE disk drives controller of the MobiDock

This field specifies whether the IDE disk drives controller of the MobiDock is enabled or disabled.

*Secondary*      The IDE drives in the MobiDock are operated on the secondary IDE channel (IRQ15).

*Disabled*        The IDE disk drive controller in the MobiDock is disabled.

## SCSI Controller - Setting the SCSI controller of the MobiDock

This field is used to specify, whether the SCSI controller of the MobiDock is enabled.

*Enabled*         The SCSI controller is enabled.

*Disabled*        The SCSI controller is disabled.

## Docking Station Password is - Password display

This field is only available if the notebook is connected to a MobiDock. This field is used to specify whether MobiDock access is to be controlled by means of a password.

**Enabled**      You have to enter the docking station password in order access the MobiDock.

**Disabled**      You can access the MobiDock without having to enter a password

You should set a docking station password to prevent unauthorized access to the MobiDock.

## Set Docking Station Password -Setting the Docking Station Password

This field enables you to install the docking station password.

## Boot menu - Defining boot sequence

The *Boot* menu defines the sequence in which the system BIOS searches the drives for system files to start the operating system.

Phoenix BIOS Setup Copyright 1985-94 Phoenix Technologies Ltd.	
Main	Advanced Security Power Docking <b>Boot</b> Exit
1. Diskette Drive 2. Hard Drive 3. CD-ROM Drive	Item Specific Help <hr/>
F1 Help	↑ Select Item
ESC Exit	←→ Select Menu
	Space Change Values

Example for the *Boot* menu

Default entry:

1. *Diskette Drive*
2. *Hard Drive*
3. *CD-ROM Drive*

To change this boot sequence, proceed as follows:

- ▶ Place the cursor on the entry for the drive you wish to move forward or back.
- ▶ Use the **F5** key to move back the selected drive.
- ▶ Use the **F6** key or the spacebar to move forward the selected drive.

## Exit - Exiting BIOS Setup

In the *Exit* menu, you can save your settings and exit BIOS Setup.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd.		
Main	Advanced	Security Power Docking Boot <b>Exit</b>
Save Changes & Exit	Exit Without Saving Changes	Item Specific Help
Get Default Values	Load Previous Values	
Save Changes		
F1 Help Defaults	↓ Select Item	Space Change Values F9 Setup
ESC Exit Values	↔ Select Menu	Enter Select ▶ Sub-Menu F10 Previous

Example for the *Exit* menu

### Save Changes & Exit

This field saves the settings you have made and exits BIOS Setup.

### Exit Without Saving Changes

This field exits BIOS Setup without saving the new settings:

If you have made changes to passwords, these changes are still saved.

### Get Default Values

This field reverts all settings to the default values.

### Load Previous Values

This field reverts all menus of BIOS Setup to the default entries.

**Save Changes**

This field saves the settings you have made.

---

# Property and data protection

The software functions on your notebook enable you to protect your system and personal data in a number of ways against unauthorized access. By combining these options, you can achieve optimum protection for your system.

## Security functions under Windows 95

Under Windows 95 you can activate a screen saver and protect it with a password. Only those users who know the password can deactivate the screen saver and access any open files.

## BIOS Setup security functions

The *Security* menu in *BIOS Setup* offers you various options for protecting your system and personal data from unauthorized access. By combining these options, you can achieve optimum protection for your system.

If CapsLK, NumLK, PadLK and ScrLK are displayed in turn in the display field, you must enter a password.

### Preventing unauthorized BIOS Setup calls

You can activate this protection by setting a supervisor password in the *Security* menu (*Set Supervisor Password*).

### Preventing unauthorized system access

You can activate this protection by setting a user password in the *Security* menu (*Set User Password*). In addition, you must select the entry *Enabled* in the *Password on boot* field.

### Preventing unauthorized access to floppy disk drive

To activate this protection, select the value *Supervisor* for the *Diskette access* field in the *Security* menu.

### Preventing unauthorized access to MobiDock

You can only activate this protection if the notebook is connected to a MobiDock.

You can activate this protection by setting a docking station password in the *Docking* menu (*Set Docking Password*).

## Setting supervisor password

The supervisor password prevents unauthorized callup of *BIOS Setup*. *BIOS Setup* can be called only by those who know the supervisor password.

The password can be at most seven characters long. All alphanumerical characters can be used; no differentiation is made between upper case and lower case.

Passwords are not displayed as they are entered.

If you have forgotten your supervisor password, please contact your technical customer service.

To set or change the supervisor password, proceed as follows:

- ▶ Call *BIOS Setup* and select the *Security* menu (see "Settings in BIOS Setup").
- ▶ Mark the *Set Supervisor Password* field and press the Enter key.

You are asked to enter a password:

Enter new Password:

- ▶ Enter the supervisor password and press the Enter key.

You are asked to confirm the password:

Re-enter new Password:

- ▶ Enter the supervisor password again and press the Enter key.

The new password is saved

Notice: Changes have been saved [continue]

If you do not want to change any other settings, you can exit *BIOS Setup*.

- ▶ Select option *Save Changes & Exit* in the *Exit* menu.

The notebook is rebooted and the new supervisor password is effective.

### Canceling the supervisor password

If you cancel the supervisor password, you automatically deactivate the user password.

To cancel the supervisor password (without setting a new password):

- ▶ Call *BIOS Setup* and select the *Security* menu (see "Settings in BIOS Setup").
- ▶ Mark the *Set Supervisor Password* field and press the Enter key.

You are asked to enter a password:

Enter new Password:

- ▶ Press the Enter key twice.
- ▶ Select option *Save Changes & Exit* in the *Exit* menu.

The notebook is rebooted and the supervisor password is canceled.

### Setting user password

The user password prevents unauthorized access to your notebook. With the user password you can prevent booting of the operating system. The system can be accessed only by those who know the user password.

You must also set a supervisor password to make the user password effective.

The password can be at most seven characters long. All alphanumeric characters can be used; no differentiation is made between upper case and lower case.

Passwords are not displayed as they are entered.

If you have forgotten your user password, please contact your technical customer service.

To set or change the user password, proceed as follows:

- ▶ Call *BIOS Setup* and select the *Security* menu (see "Settings in BIOS Setup").
- ▶ Mark the *Set User Password* field and press the Enter key.

You are asked to enter a password:

Enter new Password:

- ▶ Enter the user password and press the Enter key.

You are asked to confirm the password:

Re-enter new Password:

- ▶ Enter the user password again and press the Enter key.

The new password is saved

Notice: Changes have been saved [continue]

- ▶ To prevent booting of the operating system, mark the *Password on boot* field and select the value *Enabled*.

If you do not want to change any other settings, you can exit *BIOS Setup*.

- ▶ Select option *Save Changes & Exit* in the *Exit* menu.

The notebook is rebooted and the new user password is effective.

### Canceling user password

To cancel the user password (without setting a new password):

- ▶ Call *BIOS Setup* and select the *Security* menu (see "Settings in BIOS Setup").
- ▶ Mark the *Set User Password* field and press the Enter key.

You are asked to enter a password:

Enter new Password:

- ▶ Press the Enter key twice.
- ▶ Select option *Save Changes & Exit* in the *Exit* menu.

The notebook is rebooted and the user password is canceled.

### Setting docking station password

The docking station password prevents unauthorized access to the MobiDock if the notebook is attached to a MobiDock. The MobiDock can be accessed only by those who know the docking station password.

The password can be at most seven characters long. All alphanumerical characters can be used; no differentiation is made between upper case and lower case.

Passwords are not displayed as they are entered.

If you have forgotten your docking station password, please contact your technical customer service.

## Property and data protection

---

To set or change the docking station password, proceed as follows:

- ▶ Call *BIOS Setup* and select the *Docking* menu (see "Settings in BIOS Setup").
- ▶ Mark the *Set Docking Password* field and press the Enter key.

You are asked to enter a password:

Enter new Password:

- ▶ Enter the docking station password and press the Enter key.

You are asked to confirm the password:

Re-enter new Password:

- ▶ Enter the docking station password again and press the Enter key.

The new password is saved

Notice: Changes have been saved [continue]

If you do not want to change any other settings, you can exit *BIOS Setup*.

- ▶ Select option *Save Changes & Exit* in the *Exit* menu.

The notebook is rebooted and the new docking station password is effective.

### Canceling docking station password

To cancel the docking station password (without setting a new password):

- ▶ Call *BIOS Setup* and select the *Docking* menu (see "Settings in BIOS Setup").
- ▶ Mark the *Set Docking Password* field and press the Enter key.

You are asked to enter a password:

Enter new Password:

- ▶ Press the Enter key twice.
- ▶ Select option *Save Changes & Exit* in the *Exit* menu.

The notebook is rebooted and the docking station password is canceled.

---

# Troubleshooting and tips

Take note of the safety hints in the chapter "Important notes", when you connect or disconnect cables.

If a fault occurs, try to correct it as described in this chapter. If you fail to correct the problem, proceed as follows:

- ▶ Switch off the notebook.
- ▶ Make a note of the steps and the circumstances that led to the fault. Also make a note of any error messages displayed.
- ▶ Contact your sales office or customer service.

## The POWER LED does not light up when the device is switched on

If the POWER LED remains off, this may have the following reasons:

### **The battery is not installed correctly**

- ▶ Switch off the notebook.
- ▶ Check whether the battery is installed correctly in its compartment.
- ▶ Switch on the notebook.

### **The battery is dead**

- ▶ Recharge the battery or install a fully charged battery.

### The power adapter is not connected correctly

- ▶ Switch off the notebook.
- ▶ Check whether the power adapter is connected correctly to the notebook.
- ▶ Check whether the power cable is plugged properly into the power adapter and into the power outlet.
- ▶ Switch on the notebook. The LED on the power adapter should light up.

## The notebook's display remains blank

If your screen remains blank this may have the following reasons:

### Monitor is switched off

- ▶ Press a key or enter the password

If the notebook is connected to a MobiDock in which a VGA or SVGA adapter is installed, the notebook's display is always switched off.

### The display's contrast or brightness has been turned down

- ▶ If your notebook has a DSTN color display:  
Increase the contrast by pressing **Fn** + **←** or increase the brightness with **Fn** + **↑**.

### The notebook has been configured to drive the external monitor

- ▶ If your notebook has a DSTN color display:  
Press the key combination **Fn** + **F12** or change the *Display Device Selection* in *Main Setup* to *LCD* or *LCD&CRT*

A DSTN color display does not allow a display output at external and notebook display at the same time.

## The notebook's display is difficult to read

If the display is difficult to read this may have the following reasons:

### Reflexes

- ▶ Turn the notebook or alter tilt of the display.

### The contrast is too low or too high

- ▶ If your notebook has a DSTN color display:  
Increase the contrast by pressing **Fn** + **←** or reduce the contrast with **Fn** + **→**.

### The brightness is too low or too high

- ▶ If your notebook has a DSTN color display:  
Increase the brightness by pressing **Fn** + **↑** or reduce the brightness with **Fn** + **↓**.

## The external monitor stays blank

If your monitor remains blank this may have the following reasons:

### Monitor is switched off

- ▶ Switch the external monitor on.

### Screen has been blanked

- ▶ Press any key to continue.

### Brightness control is set to dark

- ▶ Set the brightness control to light. For detailed information, please refer to the Operating Manual supplied with your monitor.

### The notebook has been configured to drive the internal display

- ▶ Press the key combination **Fn** + **F12** or change the *Display Device Selection* in *Main Setup* to *CRT* or *LCD&CRT*.

### The external display's power cable or data cable is not connected properly

- ▶ Switch off the external monitor and the notebook.
- ▶ Check whether the power cable is plugged properly into the power adapter and into the power outlet.
- ▶ Check whether the data cable is properly connected to the notebook and the external monitor (if it is plugged in with a connector).
- ▶ Switch on the external monitor and the notebook.

## The external display is blank or the image is unstable

The wrong frequency has been selected for the external monitor or for the application program.

- ▶ Terminate the application program in Windows 95 with **Alt**+ **F4** . If the error persists after the program has been terminated, switch the external monitor off, wait at least three minutes, and then switch the external monitor on again.
- ▶ Select the correct display resolution for the application in Windows 95 with *Start/Settings/Control Panel/Display/Settings*.

## The notebook stops working

If the notebook stops working, this may have the following reasons:

### The notebook is in Standby or Suspend mode

- ▶ Reactivate the notebook by pressing a key (Standby mode) or by switching it on (Suspend mode).

### **An application program has caused the malfunction**

- ▶ Close the application program or restart the notebook (by switching it on/off or with a warm boot).

### **The battery is dead**

- ▶ Recharge the battery or install a fully charged battery.

## **The touchpad does not work**

If the touchpad does not work, it can have the following reasons:

### **Incorrect setting in Main Setup**

- ▶ Check whether the field *Internal Mouse* in the *Main Setup* is set to *Enabled*.

## **The mouse does not work**

If the connected mouse does not work this may have the following reasons:

### **Incorrect setting in Main Setup**

- ▶ Check whether the field *Internal Mouse* in the *Main Setup* is set to *Disabled*.
- ▶ Check the *COM Port* field in the submenu *Integrated Peripherals* of the *Advanced Setup* to ensure that serial port is enabled and set correctly.

### **Mouse driver not loaded**

- ▶ Check whether the required mouse driver is properly installed and is present when the application program is started. Detailed information can be found in the User Guides of the mouse or application program.

### Mouse not connected

- ▶ Switch off the notebook.
- ▶ Check whether the mouse cable is connected correctly to the notebook. If you use an adapter or extension lead with the mouse cable, check the connector.
- ▶ Switch on the notebook.

### The floppy disk cannot be written

- ▶ Check whether that floppy disk is OK and is not write-protected.

### The battery drains quickly or becomes hot

- ▶ Deep discharge the battery or perform the battery learning cycle.

If this does not succeed, you must change the battery for a new one. When you dispose of used up batteries, please observe the safety instructions in the chapter "Important Information".

### The notebook's date or time is incorrect

- ▶ Set the time and/or date in the *Main Setup*.

If the date and time are repeatedly incorrect when you switch on the notebook, the backup battery that supplies the internal clock is dead. Connect the notebook via its power adapter to a grounded power outlet or install a fresh battery. The backup battery will charge fully in roughly two days.

## The printer does not print

- ▶ Make sure that the printer is switched on and on-line (see the manuals supplied with the printer).
- ▶ Check that the printer cable connecting the notebook and the printer is connected properly.
- ▶ Check that the correct printer driver is installed.
- ▶ Check the submenu *Integrated Peripherals* of the *Advanced Setup* to ensure that port you are using is set correctly. The *COM Port* or *Parallel Port* or *Parallel Port Mode* setting, should match the settings in your application program under Windows 95

## The battery symbol is flashing

### **The battery is dead or no battery is installed**

If the BATTERY LED is flashing, the battery is empty. If the BATTERY display does not light up, either no battery is installed or there is no contact between the notebook and the battery.

- ▶ Check whether the battery is installed correctly in its compartment.

or

- ▶ Charge the battery.

or

- ▶ Deep discharge and recharge the battery.

If this does not succeed, you must change the battery for a new one. When you dispose of used up batteries, please observe the safety instructions in the chapter "Important Information".

### Acoustic warnings

#### **A beep sounds every few seconds**

The battery is almost drained.

- ▶ Charge the battery.

#### **A single continuous beep**

The notebook cannot switch to standby or suspend mode because hard disk or diskette accesses take place or there is no space provided on the hard disk.

- ▶ Wait until the hard disk or diskette accesses have terminated, or set up the required storage space on the hard disk.

#### **Three long beeps**

The notebook cannot restore the programs that were active when it switched to Suspend mode.

### Error messages on the screen

This section describes the error messages generated by the system BIOS. Error messages displayed by the operating system or programs are described in the relevant manuals.

#### **Diskette read failure - press F1 to retry boot**

The inserted system disk is defective

- ▶ Insert another system disk.
- ▶ Press function key F1.

### **No boot device available - press F1 to retry boot**

The operating system cannot be loaded

- ▶ Insert a system disk.
- ▶ Press the function key **F1**.

### **No boot sector on fixed disk - press F1 to retry boot**

The operating system is not installed on the hard disk or the hard disk has not been formatted.

- ▶ Insert a system disk.
- ▶ Press the function key **F1**.

### **Not a boot disk - press F1 to retry boot**

The disk in the floppy drive is not a system disk.

- ▶ Remove the floppy disk from the drive.
- ▶ Press the function key **F1**.

If you wish to boot from floppy disk:

- ▶ Insert a system disk.
- ▶ Press the function key **F1**.

### **Real time clock failure**

**Invalid configuration information - please run setup program**  
**Press the F1 key to continue, F2 to run the setup utility**

The system configuration information is incorrect.

- ▶ Press the function key **F2**.
- ▶ Reconfigure the system.

If the error message is displayed again, the notebook's backup battery is empty. Connect the notebook via its power adapter to a grounded power outlet or install a fresh battery. The backup battery will charge fully in roughly two days.

**Resume not possible in the docking unit.**

**Please, switch off, disconnect the notebook from the docking unit for resume  
OR  
press <F1> for continue and lose the suspended state.**

If the notebook is connected to a MobiDock, it cannot restore the programs that were active when it switched to Suspend mode.

If you press function key **F1**, the suspended system status will be lost

- ▶ Switch off the notebook and the MobiDock.
- ▶ Remove the notebook from the MobiDock.
- ▶ Switch on the notebook.

## Restoring the hard disk contents under Windows 95

If your notebook is equipped with a CD-ROM, you can reinstall Windows 95 with the Windows 95 OEM CD supplied. You must then reinstall all the drivers. To do this use the driver diskettes you created earlier using the *Create Driver Disks* icon.

If your notebook is not equipped with a CD-ROM drive you can use the backup diskettes that you created after the installation of Windows 95 to restore the hard disk to the as-supplied status.

### Restoring the hard disk contents from CD

- ▶ Insert the Windows 95 OEM CD into the CD-ROM drive.
- ▶ Start the *Setup* program on the CD.
- ▶ You must then reinstall all the drivers. To do this use the driver diskettes you created earlier using the *Create Driver Disks* icon.

---

# System expansions

Install only system expansions that satisfy the requirements and rules governing safety, RFI and electromagnetic compatibility and relating to telecommunications terminal equipment (see the chapter "Important notes").

## Memory expansion

The notebook is fitted with a standard 8 Mbytes of main memory. The main memory can be increased with additional memory modules.

Use only memory expansion which has been released for your notebook. You must always install or remove two memory modules.

Never use force when installing or removing memory modules.

Make sure that no foreign objects fall into the memory module compartment.

### Mobile 500

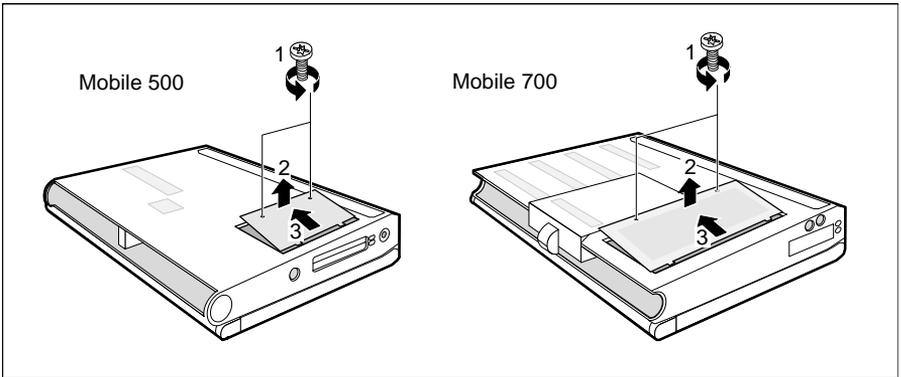

The main memory of the notebook Mobile 500 can be increased with two additional memory modules to either 16 Mbytes, 24 Mbytes or 40 Mbytes.

### Mobile 700

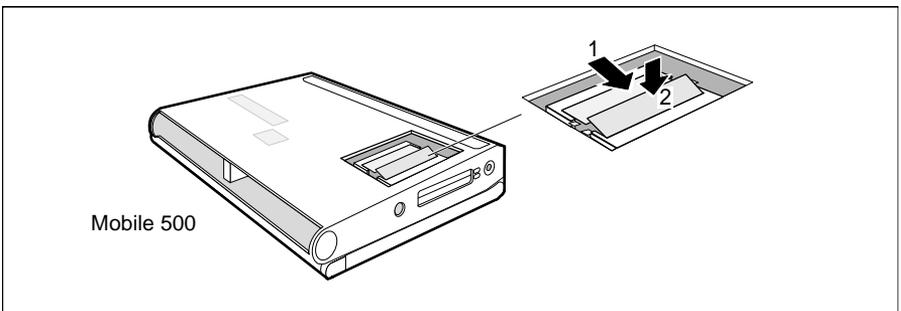

The main memory of the notebook Mobile 700 can be increased with two or four additional memory modules to either 16 Mbytes, 24 Mbytes, 32 Mbytes, 40 Mbytes, 48 Mbytes or 72 Mbytes.

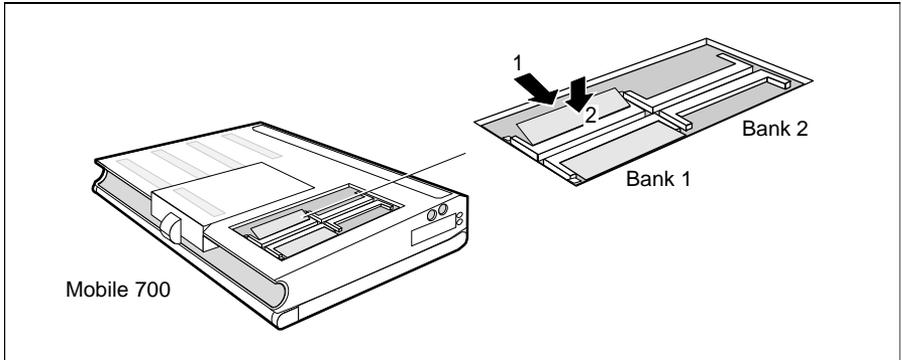

## Installing memory modules

- ▶ Switch off the notebook.
- ▶ Remove the battery.
- ▶ Pull the power plug of the power adapter out of the power outlet.
- ▶ Close the display of the notebook so that it locks into place on the left and right.
- ▶ Disconnect all cables connected to notebook.
- ▶ Place the notebook bottom-up on a flat surface.

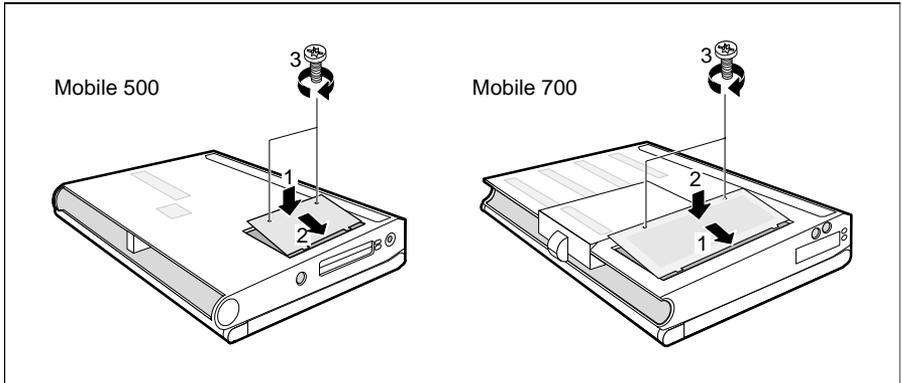

- ▶ Remove the two screws (1).
- ▶ Lift the memory compartment cover (2) and pull it in the direction of the arrow (3).

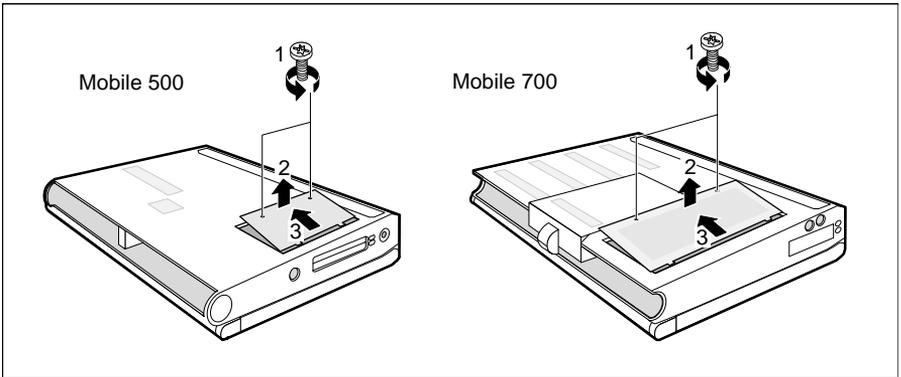

- ▶ Insert the memory modules, contacts first, into the slot (1). With the Mobile 700 notebook, you must equip bank 1 with memory modules first.
- ▶ Carefully flap the memory module down (2) until you feel it latch in place.
- ▶ Install the other memory modules in the same way.

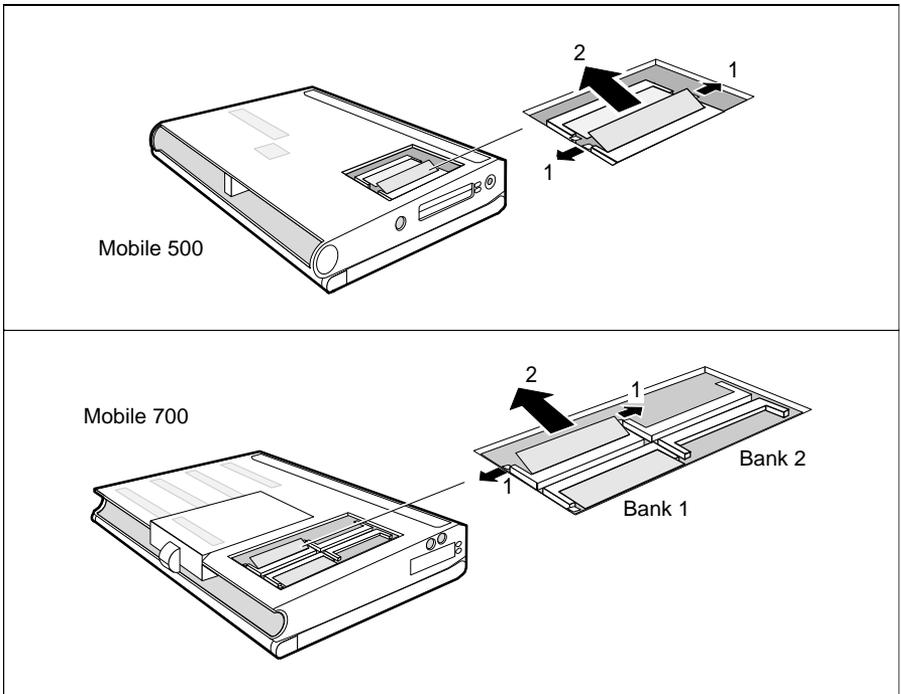

- ▶ Place the cover on its mounting location (1) and flap it into place on the underside of the notebook (2).
- ▶ Fasten the cover with the two screws (3).
- ▶ Place the notebook bottom-down on a flat surface.
- ▶ Reconnect the cables that you disconnected before.
- ▶ Swing open the display.
- ▶ Install the battery.

## Removing memory modules

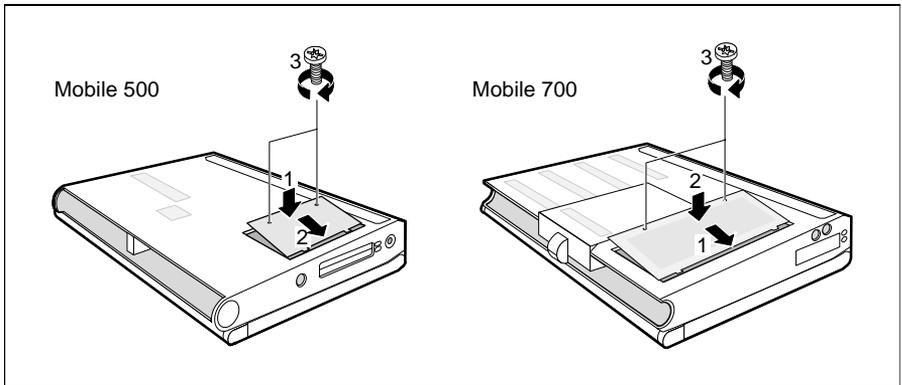

- ▶ Switch off the notebook.
- ▶ Remove the battery.
- ▶ Pull the power plug of the power adapter out of the power outlet.
- ▶ Close the display of the notebook so that it locks into place on the left and right.
- ▶ Disconnect all cables connected to notebook.
- ▶ Place the notebook bottom-up on a flat surface.

- ▶ Remove the two screws (1).
- ▶ Lift the memory compartment cover (2) and pull it in the direction of the arrow (3).

- ▶ Carefully push the two mounting clips outwards (1). The memory module flaps upwards. With the Mobile 700 notebook you must remove the memory modules of bank 2 first.
- ▶ Slide the memory module out of its location (2).
- ▶ Remove the other memory modules in the same way.

- ▶ Place the cover on its mounting location (1) and flap it into place on the underside of the notebook (2).
- ▶ Fasten the cover with the two screws (3).
- ▶ Place the notebook bottom-down on a flat surface.
- ▶ Reconnect the cables that you disconnected before.
- ▶ Swing open the display.
- ▶ Install the battery.

## Replacing a built-in hard disk

The following section tells you how to replace the built-in hard disk in the Mobile 700 notebook.

To replace the built-in hard disk in the Mobile 500 notebook, please contact one of our IT Service Shops, your sales partner or your sales office.

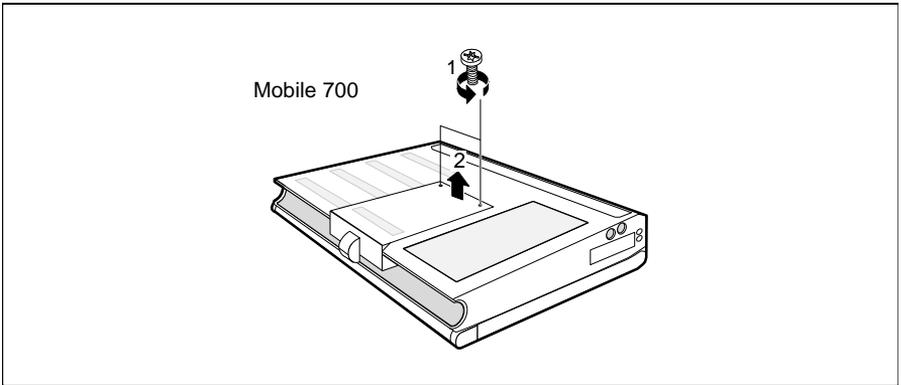

Use only hard disks which have been released for your notebook.

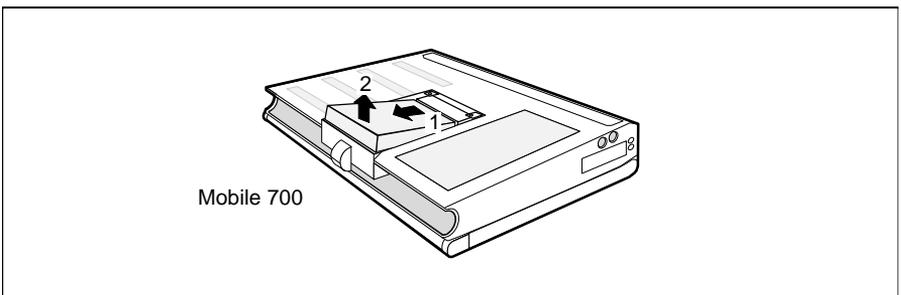

Never use force when installing or removing hard disk drives.

Make sure that no foreign objects fall into the hard disk compartment.

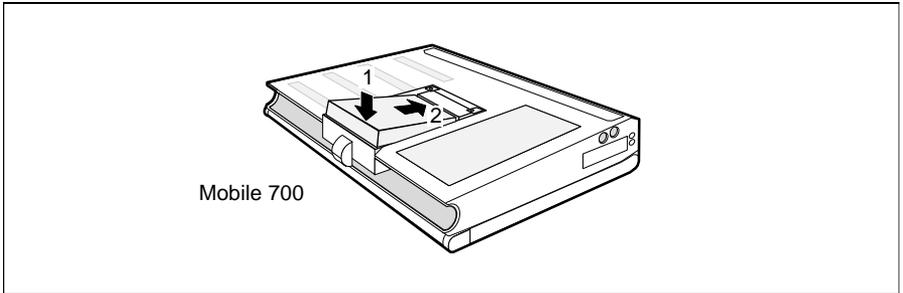

- ▶ Switch off the notebook.
- ▶ Remove the modules from both slots (e. g. battery, disk drive).
- ▶ Pull the power plug of the power adapter out of the power outlet.
- ▶ Close the display of the notebook so that it locks into place on the left and right.
- ▶ Disconnect all cables connected to notebook.
- ▶ Place the notebook bottom-up on a flat surface.

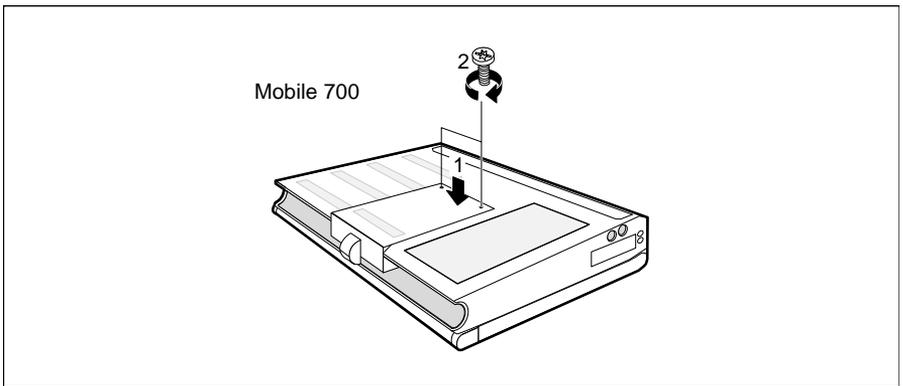

- ▶ Remove the two screws (1).
- ▶ Lift off the cover (2).

- ▶ Push the hard disk forwards (1).
- ▶ Lift out the hard disk (2).

- ▶ Insert the new hard disk so that the contacts point to the rear (1).
- ▶ Push the hard disk backwards (2).

- ▶ Place the cover on its mounting location (1).
- ▶ Fasten the cover with the two screws (2).
- ▶ Place the notebook bottom-down on a flat surface.
- ▶ Reconnect the cables that you disconnected before.
- ▶ Swing open the display.
- ▶ Re-install the modules (e.g. batteries, floppy disk drive)

---

# Connecting external devices

Disconnect all the devices from their respective power sources when you connect or disconnect a device.

Read the documentation about the external device before connecting it.

Do not connect or disconnect cables during a thunderstorm.

Never unplug a cable by pulling the cable itself. Always take hold of the actual plug body!

Connect and disconnect the cables in the order described below.

## Connecting cables

- Turn off all power and equipment switches.
- Pull all power plugs out of the grounded-contact utility power sockets.
- Connect all the cables to the notebook and the external devices. Please observe under all circumstances the information provided in the chapter "Important notes".
- Plug all data communication cables into the utility sockets.
- Plug all power cables into the grounded-contact utility power sockets.

## Disconnecting cables

- Turn off all power and equipment switches.
- Pull all power plugs out of the grounded-contact utility power sockets.
- Unplug all data communication cables from the utility sockets.
- Disconnect all the cables from the notebook and the external devices.

### Port covers and connectors

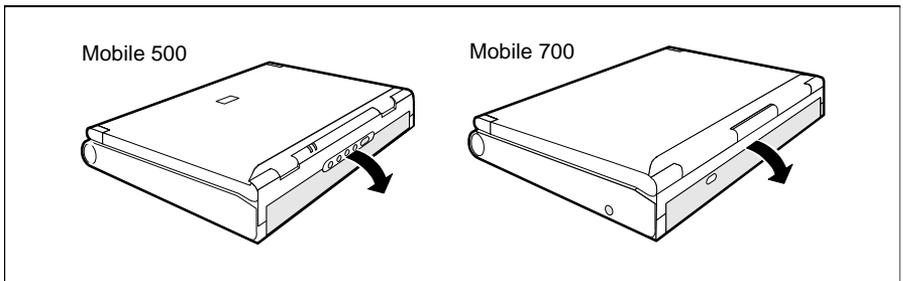

**i** If you have not attached any external devices, you should replace the port cover. You protect the port connectors from becoming soiled.

If you wish to connect an external display or an external keyboard and an external mouse, a device with serial or parallel port, a MobiDock or a QuickPort/QuickPort Plus, you must first open the port cover:

#### Mobile 700

If you wish to connect an external display or a device with serial or parallel port, a MobiDock or a QuickPort/QuickPort Plus or an audio device, you must first open the port cover:

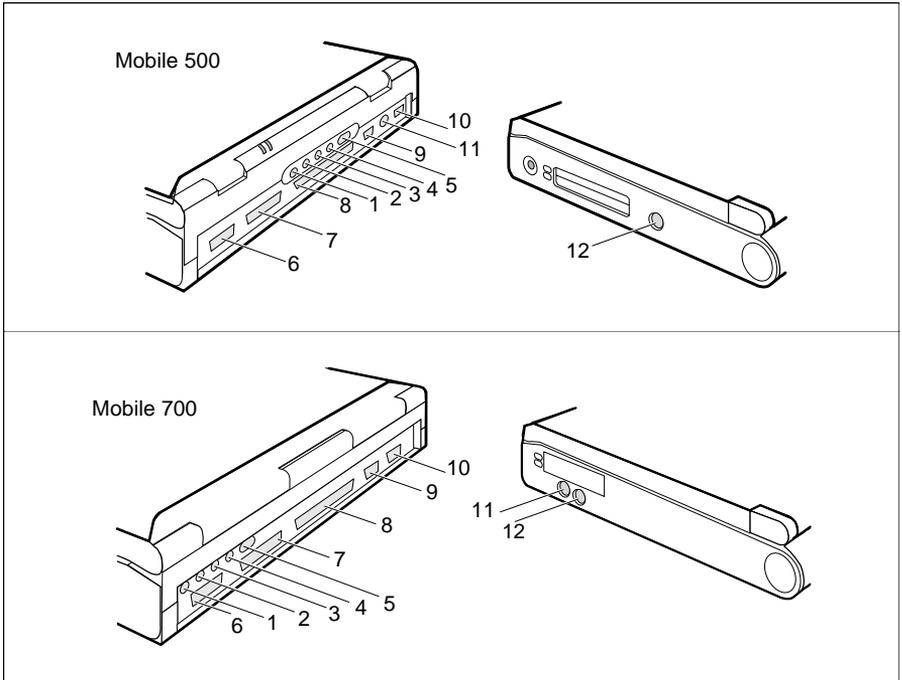

#### Port cover

- ▶ Flap the port cover down.

**i** You can flap the port cover onto the bottom of the notebook and lock it into place.

## Ports

- 1 = Microphone port
- 2 = Loudspeaker port
- 3 = Audio input
- 4 = Audio output
- 5 = Infrared (IrDA)
- 6 = Game/MIDI

- 7 = Parallel port
- 8 = Connection for MobiDock or QuickPort/QuickPort Plus
- 9 = Monitor port
- 10 = Serial port
- 11 = PS/2 mouse port/keyboard port
- 12 = PS/2 mouse port/keyboard port

### Connecting devices with serial or parallel port

- ▶ Connect the data cable of the external device to the appropriate port.

The serial port is configured by default as *COM1*. You can change the setting in the *COM Port* field in the *Integrated Peripherals* submenu in *Advanced Setup*. The parallel port is configured by default as *LPT1*. You can change the setting in the *Parallel Port* field in the *Integrated Peripherals* submenu in *Advanced Setup*.

### Connecting an external monitor

You can connect a VGA, SVGA (Super VGA) or multisync monitor. The notebook's built-in display controller supports resolutions up to 1024 x 768 with 256 colors. If you wish to use a resolution greater than 640 x 480, you must load the relevant display drivers (see the manuals supplied with your display).

- ▶ Plug the data cable of the monitor into the monitor port.
- ▶ Connect the power cable of the external monitor to a power outlet and switch on the monitor.
- ▶ Switch on the notebook.
- ▶ Configure the display output in the *Display Device Selection* field in *Main Setup* or by pressing the key combination **Fn** + **F12**.
- ▶ Select the resolution for the external monitor.

## Connecting the mouse

- ▶ Connect the mouse, depending on the type, to either the PS/2 mouse port or the serial port. The touchpad and the touchpad buttons are disabled when you connect a mouse.
- ▶ Switch on the notebook.
- ▶ Set the *Internal Mouse* field in *Main Setup* to *Disabled* if you want to use a serial mouse.
- ▶ Install the necessary device driver (see the manual supplied with the mouse).

## Connecting an external keyboard

Connecting an external keyboard does not disable the notebook's built-in keyboard.

- ▶ Connect the external keyboard to the external keyboard port.  
If you wish to connect a keyboard with a 5-pin connector you will require an adapter from 5-pin DIN to 6-pin DIN mini connector.

Never press the keys on the external and internal keyboards at the same time.

If the external keyboard does not have an **Fn** key, you can press the right **Ctrl** key and the **Alt Gr** key together instead.

For example, to enter the key combination **Fn** + **F1** on the external keyboard you would press **Ctrl** + **Alt Gr** + **F1**.

## Connecting external audio devices

If you attach an external microphone, the built-in microphone is disabled. If you attach an external loudspeaker, the built-in loudspeaker is disabled.

Connect the audio device (external microphone, external loudspeaker, audio output) to the appropriate port.

# Connecting a MobiDock or QuickPort/QuickPort Plus

The manuals supplied with the MobiDock and the QuickPort/QuickPort Plus describe how to connect the notebook.

Read the MobiDock or QuickPort/QuickPort Plus manuals carefully before attempting to connect the notebook.

Make sure that no PC cards (PCMCIA cards) or extracting tools for PC cards are projecting from the notebook. No power adapter may be connected when you dock the notebook.

If the notebook is connected to a MobiDock in which a VGA or SVGA adapter is installed, the notebook's display is always switched off.

If you experience problems with the screen output on the external screen, test the settings in the *Display Device Selection* field of the *Main Setup*.

Makes sure that any module installed in the MobiDock or the QuickPort/QuickPort Plus do not use I/O addresses, interrupts or DMA channels already used by the notebook. Details of the I/O addresses, interrupts and DMA channels are provided in the section "Technical Data".

The maximum DMA transfer rate between MobiDock and notebook is of 5 Mbytes/second.

If necessary, you can make the I/O addresses (e.g., for the display controller) or the interrupts (e.g., for the serial or parallel port) available by disabling the relevant components in the *BIOS Setup*.

You should set a docking station password to prevent unauthorized access to the MobiDock.

When the MobiDock is switched off, you should remove the batteries from the notebook to prevent MobiDock from causing long-term capacity loss to the batteries.

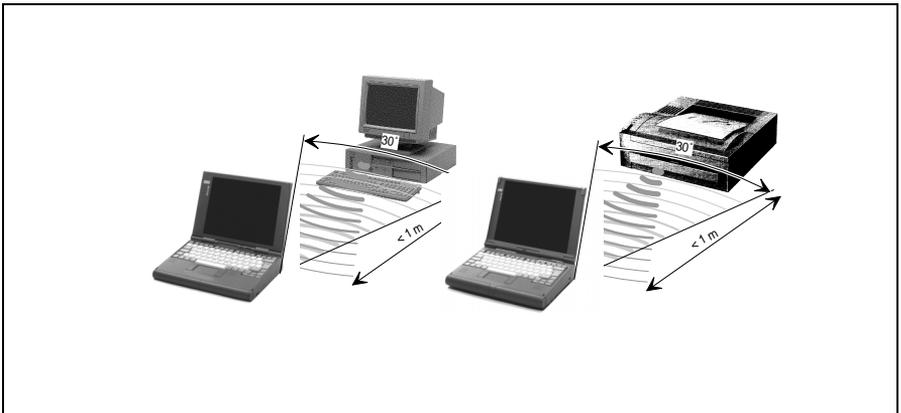

## Transferring data with the infrared interface

The infrared interface at the backside of the notebook enables wireless serial data transfer.

By default, the infrared interface is set to *COM2* in the setup. You can change the setting in the *IrDA Port* field in the *Integrated Peripherals* submenu in *Advanced Setup*.

The infrared interface can only be used, when the infrared interface is enabled in the *IrDA Port* field in the *Integrated Peripherals* submenu in *Advanced Setup*.

- ▶ Set up the infrared transmitter and receiver as illustrated above. The devices may be no more than one meter apart. The infrared interface of one device must be in the range of influence (horizontally approx. 30° and vertically approx. 15°) of the infrared interface of the other device.

---

# Technical data

## Notebook Mobile 500

Processor	Pentium P54C/LM, 100 MHz, 133 MHz or 150 MHz
Numeric processor	integrated in processor
Cache:	16 Kbytes integrated in processor
Main memory (EDO-RAM 3.3 V):	8, 16, 24 or 40 Mbytes
System ROM (flash EPROM):	256 Kbytes for system and video BIOS
Disk drives:	Floppy disk drive for 3 1/2-inch floppy disks, Hard disk drive with 810 Mbytes, 1.2 Byte or 2.1 Byte
Display:	Backlit liquid-crystal transmissive display (LCD)
Display diagonal:	
– LCD TFT	28.7 cm (11.3 inches) SVGA
– LCD DSTN	28.7 cm (11.3 inches) SVGA
Resolution / colors:	
– LCD TFT	800x600 / 262,144 colors (18 Bit)
– LCD DSTN	800x600 / 4096 colors
Display controller:	C&T 65550 on PCI bus with Windows accelerator
– Video memory(EDO-RAM):	1 Mbytes
– supported resolutions on external display	640x480 / 16.7 Mio. colors and 85 Hz 800x600 / 65,536 colors and 85 Hz 1024x768 / 256 colors and 85 Hz
Audio:	Soundchip ESS1888
– Compatibility:	Soundblaster Pro, Ad lib, MS-Soundsystem
– A/D and D/A conversion:	16 bit, Stereo

Input devices

- keyboard: 86 keys
- touchpad 65 x 40 mm

Slots

- PC card (PCMCIA): 2 x Type I/type II or 1x type III

Ports

- PS/2 mouse port: 6-pin mini DIN female connector
- External keyboard port: 6-pin mini DIN female connector
- MobiDock connector: 240-pin female connector
- Parallel port: 25-pin female connector, bi-directional, EPP /ECP capable
- Port for external display: 15-pin female connector
- Serial port: 9-pin male connector, 16550 compatible
- Microphone port: connector, mono
- Audio input: connector, stereo
- Audio output: connector, stereo
- Port for external loudspeaker: connector, stereo
- Game/Midi 15-pin female connector
- Infrared interface (IrDA)

- Power consumption: 45 W max.  
(notebook on with battery charging)

Permissible temperature

- Operation 5 °C .... 40 °C
- Transportation -25 °C .... 60 °C

- Dimensions (Width x Depth x Height) 297 mm, 218 mm, 37/54,5 mm

- Weight with 1 battery (Li-Ion) 2.5 - 2.7 kg

## Battery - Mobile 500

### Lithium Ion battery (Li-Ion)

Rated voltage	14.4 V
Rated capacity	37 Wh 2.6 Ah
Charging time (when not in operation):	4 hours
Operating time with a battery:	ca. 3 hours (depending on application)
Weight:	380 g

### Nickel-metal hydride battery (NiMH)

Rated voltage	9.6 V
Rated capacity	24 Wh 2.5 Ah
Charging time (when not in operation):	1 hour 45 minutes
Operating time with a battery:	approx. 2 hours (depending on application)
Weight:	480 g

## Notebook Mobile 700

Processor	Pentium P54C/LM, 100 MHz, 133 MHz or 150 MHz
Numeric processor	integrated in processor
Cache:	16 Kbytes integrated in processor 256 Kbytes synchronous second-level cache
Main memory (EDO-RAM 3.3 V):	8, 16, 24, 32, 40, 48 or 72 Mbytes
System ROM (flash EPROM):	256 Kbytes for system and video BIOS
Disk drives:	Floppy disk drive for 3 1/2-inch floppy disks Hard disk drive with 810 Mbytes, 1.2 Byte or 2.1 Byte CD-ROM drive quadruple speed or sextuple speed MOD drive second Hard disk drive
Display:	Backlit liquid-crystal transmissive display (LCD)
Display diagonal:	
– LCD TFT	28.7 cm (11.3 inches) SVGA
– LCD TFT	30.7 cm (12.1 inches) SVGA
– LCD TFT (Display for overhead projector)	30.7 cm (12.1 inches) SVGA
Resolution / colors:	800x600 / 262,144 colors (18 Bit)
– LCD 11.3 inches	800x600 / 262,144 colors (18 Bit)
– LCD 12.1 inches	
Display controller:	C&T 65550 on PCI bus with Windows accelerator
– Video memory(EDO-RAM):	2 Mbytes
– supported resolutions	640x480 / 16.7 Mio. colors and 85 Hz
on external display	800x600 / 65,536 colors and 85 Hz 1024x768 / 256 colors and 85 Hz
Audio:	Soundchip ESS1888
– Compatibility:	Soundblaster Pro, Ad lib, MS-Soundsystem
– A/D and D/A conversion:	16 bit, Stereo

## Input devices

- keyboard: 86 keys
- touchpad 65 x 40 mm

## Slots

- PC card (PCMCIA): 1 x Type I/type II and 1x type III simultaneously

## Ports

- PS/2 mouse port: 6-pin mini DIN female connector
- External keyboard port: 6-pin mini DIN female connector
- MobiDock connector: 240-pin female connector
- Parallel port: 25-pin female connector, bi-directional, EPP /ECP capable
- Port for external display: 15-pin female connector
- Serial port: 9-pin male connector, 16550 compatible
- Microphone port: connector, mono
- Audio input: connector, stereo
- Audio output: connector, stereo
- Port for external loudspeaker: connector, stereo
- Game/Midi: 15-pin female connector
- Infrared interface (IrDA)

## Power consumption:

45 W max.  
(notebook on with battery charging)

## Permissible temperature

- Operation: 5 °C .... 40 °C
- Transportation: -25 °C .... 60 °C

Dimensions (Width x Depth x Height) 300 mm, 230 mm, 51.2/62.5 mm

Weight with 1 battery (Li-Ion) and CD ROM drive approx. 3.5 kg

## Battery - Mobile 700

### Lithium Ion battery (Li-Ion)

Rated voltage	14.4 V
Rated capacity	56 Wh 3.9 Ah
Charging time (when not in operation):	4 hours
Operating time with a battery:	approx. 3.5 hours (depending on application)
Weight:	550 g

### Nickel-metal hydride battery (NiMH)

Rated voltage	7.2 V
Rated capacity	43 Wh 6 Ah
Charging time (when not in operation):	2 hours
Operating time with a battery:	approx. 3 hours (depending on application)
Weight:	760 g

## Power adapter

### Primary

– Rated voltage:	100 V to 240 V
– Rated frequency:	50 Hz to 60 Hz
– Max. rated current:	0.75 A / 1.5 A

### Secondary

– Rated voltage:	19 V
– Max. rated current:	2.4 A

## Car adapter

### Primary

– Rated voltage: 10 V to 15 V

### Secondary

– Rated voltage: 19 V

– Max. rated current: 2.4 A

## CD-ROM drive

### Supported CD formats:

- CD-Digital Audio
- CD-ROM (Mode 1 and Mode 2)
- CD-ROM XA (Mode 2, Form 1 and Form 2)
- CD-I (Mode 2, Form 1 and Form 2)
- CD-I Ready
- CD-Bridge
- Photo-CD (Single- and Multisession)
- Video-CD

### Laser

– Class 1 Laser Product

– Type:

Semiconductor laser GaA/As

– Wave length:

780 nm

– Power output:

5 mW max.

### Drive performance

– Data interface:

ATAPI

– Cache memory:

128 Kbytes

– Data transfer rate

quadruple speed:

600 Kbytes/s

sextuple speed:

900 Kbytes/s

– IDE interface:

10-13.3 Mbytes/s (PIO Mode 4)

– access time

quadruple speed:

300 ms

sextuple speed:

190 ms

## Interrupts, I/O addresses, and DMA assignment

### Modifiable internal settings (Mobile 500 / Mobile 700):

Function	I/O address	IRQ	DMA
Soundchip "ESS1888"	<p><b>220h - 22Fh *</b> 230h - 23Fh 240h - 24Fh 250h - 25Fh</p> <p><i>Gameport:</i></p> <p><b>201h*</b></p> <p><i>Midi Play Unit (MPU):</i> <b>300h - 301h</b> 310h - 311h 320h - 321h 330h - 331h <b>388h - 38Bh **</b></p>	<p><i>Capture Wave:</i> <b>IRQ 5 * (LPT)</b> IRQ 7 (LPT) IRQ 9 IRQ 10</p> <p><i>+ Playback Wave</i> <b>IRQ 11 *</b> IRQ 15 (2. IDE)</p>	<p><i>DMA-Channel 1:</i> <b>DMA 1 *</b> DMA 0 DMA 3</p> <p><i>+ DMA-Channel 2:</i> <b>DMA 5 *</b> DMA 6</p>
Parallel port <b>LPT</b>	<p><b>378h - 37Fh* =</b> <b>IRQ 7*</b> 3BCh- 3C5h = IRQ 7 278h - 27Fh = IRQ 5 378h - 37Fh = IRQ 5</p>		DMA 1 or DMA 3 only at ECP
1. Serial port <b>COM</b>	<p><b>3F8h - 3FFh* =</b> <b>IRQ 4 / COM1 *</b> 2F8h - 2FFh = IRQ 3 / COM2 3E8h - 3EFh = IRQ 4 / COM3 2E8h - 2EFh = IRQ 3 / COM4</p>		
2. Serial port <b>COM</b> = infrared interface <b>IrDA</b>	<p>3F8h - 3FFh = <b>IRQ 4 / COM1</b> <b>2F8h - 2FFh * =</b> <b>IRQ 3 / COM2 *</b> 3E8h - 3EFh = IRQ 4 / COM3 2E8h - 2EFh = IRQ 3 / COM4</p>		

\* = default setting in BIOS SETUP

\*\* = default setting when audio is enabled

**Fixed internal settings (Mobile 500 / Mobile 700):**

Function	I/O address	IRQ	DMA
DMA register	080h - 09Fh		
DMA controller #1	000h - 01Fh		
DMA controller #2	0C0h - 0DFh		DMA 4
Interrupt controller #1	020h - 030h		
Interrupt controller #2	0A0h - 0BFh		
Timer	040h - 050h	IRQ 0	
PCI bridge	CF8h - CFFh		
1. IDE hard disk controller (PCI)	1F0h - 1F8h, 3F6h	IRQ 14	
Realtime clock / NMI controller	070h - 07Fh	IRQ 8	
Fast A20 gate and CPU reset	092h		
numeric processor incl. clear and reset	0F0h, 0F1h, 0F8h, 0FCh, 0FEh	IRQ 13	
I/O controller	398h - 399h		
Super I/O register	0F2h - 0F3h		
Floppy disk drive controller	3F0h - 3F7h	IRQ 6	DMA 2
Display controller "C&T65550"	3B0h - 3DFh		
PC card (PCMCIA) controller "Cirrus CL-GD6730"	Automatically recognized	shared IRQ!	

**Settings for external components (e.g. MobiDock, PC card):**

Function	I/O address	IRQ	DMA
2. IDE-Hard disk controller in the MobiDock (PCI)	170h - 177h, 376h	IRQ 15	
Internal <b>SCSI</b> controller "Adaptec AIC7850" in the MobiDock	Automatically recognized	<b>Shared IRQ</b>	
Max. two PCI slots in the MobiDock (PCI to PCI Bridge)	and defined!	<b>Shared IRQ</b>	
Max. two ISA slots in the MobiDock (PCI to ISA Bridge)	a) PnP-ISA: is automatically recognized and defined (no shared IRQ)! b) ISA (without PnP): depends on the card setting!		
<b>PC card</b> (PCMCIA cards): Mobile 700: max. 1x Type III + 1x Type II or 2x Type II Mobile 500: max. 1x Type III or 2x Type II - I/O cards (Modem, Network board, COM, SCSI etc.) - memory modules (e. G. SRAM, FLASH) - ATA modules (z. B. Hard disk, Sundisk)	PC cards require an IRQ ( <b>no</b> shared IRQ!), I/O addresses and/or a memory area and possibly DMA. (see also the documentation on the PC card).		

\* = default setting in BIOS-SETUP

PnP = Plug and Play

**Shared IRQ:**

Several PCI components can **share one** free ISA-IRQ (assignment of the IRQs is automatic).

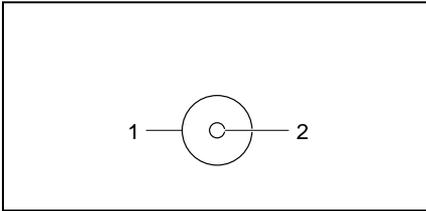

Conflict situations with ISA cards can be prevented under DOS/WfW with the "ISA configuration utility" disk, created by the batch files in the */PROGS/DISKS* directory (IRQ, DMA, I/O address, etc. are reserved for the ISA card and are therefore no longer available for the PCI bus!).

Under Windows 95 you can change the resource contentions manually with the "Device Manager".

## Port assignment

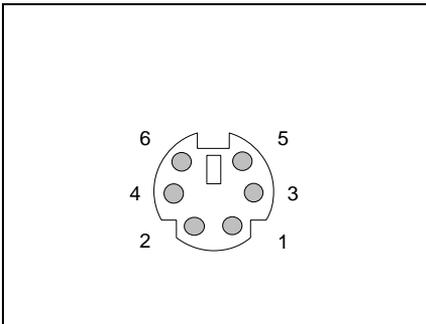

The assignment of the external ports are as follows:

### DC jack (DC IN)

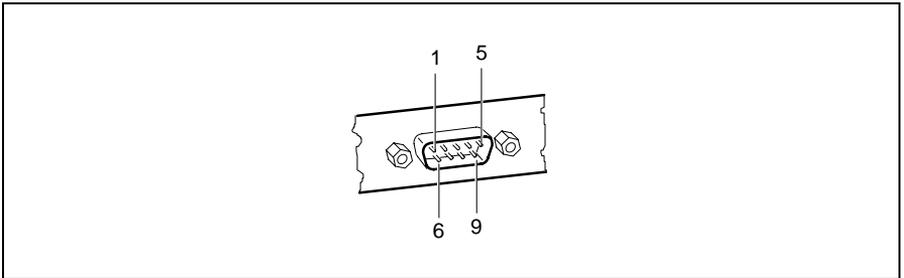

Pos.	Meaning
1	0 V
2	+19 V

### Port for external keyboard and PS/2 mouse

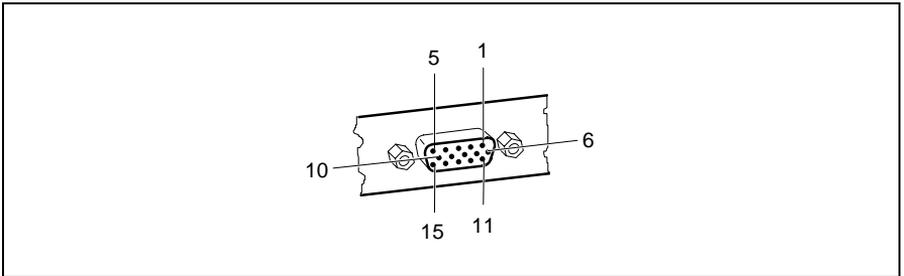

Pin	Signal name
1	Data
2	free
3	0 V
4	+5 V
5	clock
6	free

## Serial port

Pin	Signal name	Description
1	DCD (Data Carrier Detect)	Data Carrier Detect
2	RxD (Receive Data)	Receive Data
3	TxD (Transmit Data)	Transmit Data
4	DTR (Data Terminal Ready)	Data Terminal Ready
5	Signal Ground	Signal Ground
6	DSR (Data Set Ready)	Data Set Ready
7	RTS (Request to Send)	Request to Send
8	CTS (Clear to Send)	Clear to Send
9	Ri (Ring Indicator)	Ring Indicator

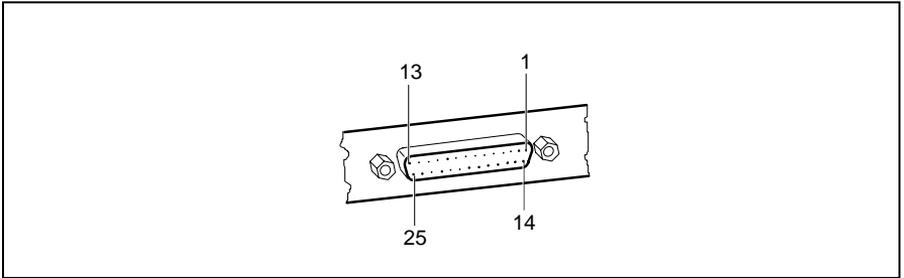

## Port for external monitor

Pin	Description
1	Video output red
2	Video output green
3	Video output blue
4	reserved
5	DDC ground
6	Video ground red
7	Video ground green
8	Video ground blue

Pin	Description
9	+5V
10	logic ground
11	reserved
12	DDC data line (Bidirectional)
13	horizontal synchronization
14	vertical synchronization
15	DDC clock signal line

## Parallel port

The parallel interface supports three transfer modes: SPP, EPP and ECP. SPP mode (standard parallel port) is the mode traditionally used to drive a printer. EPP (Enhanced Parallel Port) and ECP (Extended Capabilities Port) modes are transfer modes that allow transfer rates of 2 and 2.4 Mbytes/s. These modes will only work in connection with peripheral devices which specifically support them. Cases where these transfer modes are used are, for example, interface conversions between Parallel and SCSI or Parallel and IDE. The pinouts are different in all three modes.

### Pinout in SPP mode (Standard Parallel Port)

Pin	Signal name	Description/direction
1	STROBE	Data message
2-9	Data Lines 0-7	Data lines 0-7
10	ACKNOWLEDGE	Data acknowledgement
11	BUSY	Not ready to receive
12	PE	End of paper
13	SELECT	Device selection
14	AUTO	Automatic new line
15	ERROR	Device error
16	INIT	Reset/initialize
17	SELECT IN	Printer selection
18-25	GROUND	Ground

### Pinout in EPP mode (Enhanced Parallel Port)

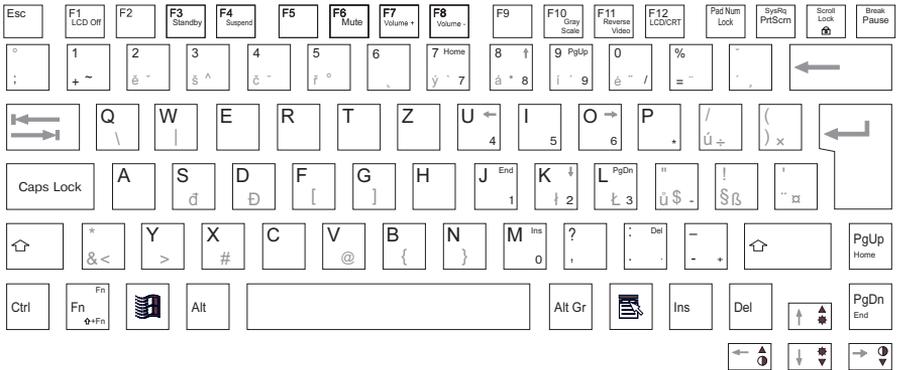

Pin	Signal name	Description/direction
1	Write	output
2-9	Data Lines	Input/output
10	Intr	Input
11	Wait	Input
12	reserved	-
13	reserved	-
14	DStrb	Output
15	reserved	-
16	reserved	-
17	AStrb	Output
18-25	Ground	-

### Pinout in ECP mode (Enhanced Capabilities Port)

Pin	Signal name	Description
1	HostClk	Output
2-9	Data Lines 0-7	Input/output
10	PeriphClk	Input
11	PeriphAck	Input
12	AckReverse	Input
13	Xflag	Input
14	HostAck	Output
15	PeriphRequest	Input
16	ReverseRequest	Output
17	ECP-Mode	Output
18-25	Ground	-
